There's a few on linux. SatTrack is reasonable; the newer versions
are commercial but the 3.x version is free for amateur use. Unfortunately
it appears to be non-Y2K compliant, having tried to use it this morning.
The source is available so I might try to fix it later.

There's also mtrack, which is quite good, and predict, which I haven't
tried yet.

I have .debs and .rpms of sattrack at
ftp://ftp.rising.com.au/pub/hamish/sattrack, or you can download the source
from ftp.funet.fi. You can get mtrack from
ftp://ftp.hes.iki.fi/pub/ham/unix/satellite/ .. I don't know where to get
predict.

A nearby thread contained an article by Carl R. Stevenson
<wa6vse@fast.net> which said:

> A nice tracking program for Linux exists: SatTrack. Unfortunately it
> has gone commercial, and it seems to target professional users so it
> is probably quite expensive. But you can always ask, it was written
> by a radio amateur.

Some while ago I contacted www.bester.com for pricing details of the
current version of SatTrack, and was informed that it was not available
to anyone outside the US as the company did not have an export license.
The earlier, non-commercial version is still freely available.

This is most irritating as (like, I guess, most of the people who post
to this newsgroup) I am a mere ham (in a NATO country!) wishing to use
the software for private, non-commercial research and experimentation.

Any thoughts?

Here is the only bug I found sofar. It seems to try hard at Y2K
compatability (essentially using the range 1950-2049) but there is
a routine that calcs the daynumber and starts from a vaguely-defined
year number (sometimes a 4-digit, sometimes a 2-digit value).

This patch makes it run again today. I hope (and believe) it also
works when year-00 keps are loaded.

Apparently it has now so many features that it is considered a strategic
tool by the naive export-control authorities in the USA. You know, those
guys that will prevent US companies from exporting an encryption tool
on a floppy or a file on an Internet site, but have no problem with
exporting a book containing a program listing...

Source record: 10693

My 10 year old version of Instant Track rolled over last night at midnight GMT with no glitch or no problems whatsoever. I have downloaded the patch from AMSAT site but have not updated anything. If I have a problem with the software it will probably show up when I try to udate the element sets. I'll let everyone know. I also use Nova and Winorbit so I am not too concerned. By the way I use Instant Track on an old 486 machine that I leave on 24 hours a day and only reboot in case of a power failure. Pat K4AVO

From: Marc Suttle <msuttle@charlotte.infi.net>
Message-ID: <386EA558.FFCA4BFF@charlotte.infi.net>
Source record: 10695

The only casualty I suffered when the calendar rolled over to 1/1/2000 was the much used and appreciated QuikTrak program. Following the discussion here and at AMSAT, I hold no hope for a fix. I have gone to STSPLUS (Version 9540) as an alternative and all seems OK so far. I use a pair of Compaq DeskPro 286e machines with math co-processors for my KAM, Universal M-1000 and satellite tracking needs. Any recommendations for the best non-windows tracking program?

Marc/N4VLQ

12. relatively cheap satellite antenna systems

Source record: 10696

All I have done with satellites is work MIR on packet and work thru AO27
with an HT.
I would like to do a bit more but put off by thought of spending several
thousand dollars on AZ-EL rotator ($1500CDN with controller for Yaesu model)
and antennas.

What have other people done to start off without spending too much? By not
too much I wonder if anything useful can be done for $1000 or so.

One thought I had was to put up a tripod mast on a shed and install a tv
rotator with a small dual band antenna at a fixed elevation.

Thanks for your thoughts

Right now there is only one sat up that should require tracking. Many
of the simple omnidirectional antennas should work for most of the ones
that are up now. If you can do the work yourself, then directiona
antennas can be used with seperate rotators. The Alliance rotators used
to be found for almost nothing used. You just have to track the sats
manually. YOu use one for the az and another for the el after a
modification to the mounting. That rotator will allow the mast to pass
through the housing.

If you use an AZ,EL rotator there is a program with an interface called
Fodtrack or Fodtrak that has a simple to build or around $ 100 to buy
interface. The program is free at AMSAT.ORG.

Source record: 10757

Hi Peter.

I use WinOrbit 3.5 and initially experienced a similar problem. I take it that you are new to WinOrbit. Is that so? Or, is this something that has worked fine for a while and then went bad?

What I initially experienced is that WinOrbit chokes on the formatting data when you clip your orbital elements from a HTML source and paste them directly into the file that WinOrbit updates from. Instead, I clip the elements and then (using Wordpad) do a "paste special" paste into the update file. The "paste special" will ask what type of paste to use and you should choose "unformatted text" or some such. Finally, save the file as a "Text document." The goal here is to have plain old ASCII without a bunch of formatting data with it. That's always worked fine for me.

As far as Y2K, I haven't gotten any elements with dates after 99365, so don't know if it'll swallow them or not but program still runs great after the new year.

73's,
Martin Ronney, WB6YMI

I haved listening to ao27 thru a vertical dual band antenna but can only get faint signals when the satellite is almost above me, works much better with HT whip or arrow satellite antenna.

Yes, if you have a Tech + you already have credit for 5 wpm
code, plus elements 2 and 3a ... if you take and pass 3b and
get a CSCE before April 15, you can go back to a VE session
after April 15 and present your valid Tech+ license and the
CSCE for element 3b and be upgraded to General.

It's all spelled out in the R&O ... available in Adobe .pdf
format at:

http://www.nocode.org/articles

check out the main page, too ... you might decide to join NCI :-)

I have been on HF for many years, and was always interested in the GHz region of our spectrum. Recently, I found myself in posession of an 18" dish and associated LNB. Has anyone used these for Amateur purposes? Would be nice to be able to use the LNB, as it's already pretty well aligned with the dish.

Thanks in advance,

-Jeffrey

I worked the Shuttle and Mir with a 13 element beam on just an Azimuth TV Rotor. Not the best way to work space, but worked GREAT for low horizon passes, I was getting the craft at Full tilt. One contact was done 1850 KM Away.

But, I agree, there is no real easy way to point in the sky and have it automatically tracked. Wish there was though.

Paul.

34. Psion S5 control program for PCR1000 Wanted

Newsgroup: rec.radio.amateur.space
Date: 2000-01-03 00:00:00 UTC
From: Paul Telco <paul@telco1.demon.co.uk>
Message-ID: <946899450.17360.0.nnrp-14.9e984783@news.demon.co.uk>
Source record: 10768

Hi,

Does anyone know of any Psion S5 software that can control an Icom
IC-PCR1000 receiver please?

I want to go mobile with my Weather Satellite Imagery setup and my S5 seems
the most portable solution without actually buying a new scanner.

Some time ago I wrote a simple program for the Psion S3a which is on my
website at www.telco1.demon.co.uk/psionpc.htm but you have to manually enter
all the channel details. Things like scanning, signal strength display and
bandscope are simply beyond my programming skills!

When I posted my prog to the website someone volunteered some S5 software
but I had a hard drive fail since then and don't heave the details.

Any help greatly appreciated,

Paul Telco

Source record: 10769

I have a C/Ku TVRO (3m dish) system in perfect operating condition. Subscriptions expire in couple of weeks so now I want to gear up for P3-D. Looking for equipment suggestions (ie downconverters/upconverters, feeds etc). I have a Kenwood TS780 to use as an i.f. for the microwave bands and a Yaesu FT-847 for the other modes.

Anyone else gone this TVRO route with success? I plan to modify the mount to eliminate the arc tracking and install full AZ/EL control. Anyone with experience and/or suggestions to accomplish this?

I suspect this will become more popular as launch becomes imminent. These 3m dishes are plentiful, at least around here. Ideas, comments?

Sorry, I don't find any reason to complain about recent government bureau actions regarding Amateur Radio rules and regs. Just interested in getting on with some new equipment. Thanks!

When it is true what the P3D designers claim (usually the predictions
are optimistic by at least 10dB, not because of miscalculation of course
but because of alligator AGC effects), that dish will be way overkill
to work P3D.

Note that on the lower bands (2M, 70cm) you can do better with a yagi
or yagi array (certainly when considering the trouble of az/el mounting
such a dish), and on the higher bands you don't need that big a dish
to work P3D and you will have the disadvantage of having to track very
precisely to keep the satellite in the narrow beam...

You may be assuming that I will be running a 50-100 watt transmitter on the microwave bands but that will not be the case. There are a couple of ways to generate EIRP: you can build/buy an amplifier or use gain antennas. Some that we have all heard use both methods, to the detriment of us all ....

The transverters/projects I have viewed produce power in the mW range. My current dish is a cheap alternative to purchasing/building an amp. Mostly, I am interested in the results from those who have attempted what I am considering. How did you set up the feed system, drive systems, position readouts etc.

>Note that on the lower bands (2M, 70cm) you can do better with a yagi

Hmmmm??! It hadn't occurred to me to try to use 2/.7m on the dish. I have an adequate array for that now, but it is an interesting project idea. Others may be interested in more details from you.

>to work P3D and you will have the disadvantage of having to track very
>precisely to keep the satellite in the narrow beam...

OK, I think here is the problem. I was under the mistaken impression that P3-D was going to be similar to AO-13 where it was essentially parked in the sky for relatively long periods of time. Even an obit such as AO-10 now follows would be no problem for the dish control setup I have envisioned.

What transverters, circuits are folks using or going to use.
Recommendations? I failed to take advantage of the Drake equipment project when it went around so I fear I must now go another route..

That isn't totally true.

It has been proven that you can put a graphic with a link in an email, and
have it go to any url that you want.

At that point, you can load any HTML or DHTML and have it execute arbitrary
code on the users machine.

Toll Free

Hi,

You can still download it from ftp.amsat.org but its the 3.05 version.

It's ok on linux 2.0.x but is a bit fiddly to compile on 2.2.x because a
a static variable name has changed in the ioctl library.

Paul: I found a Cushcraft two meter Turnstile antenna on eBay for $70 dollars, also a Icom 271A on eBay, and used my old Icom 740 (HF) to work 28 states, Canada and Mexico since Labor Day. With my Icom 471A I have worked SO-35 on the uplink using a 440 Ringo Ranger and listened on the Icom 271A with turnstile on the downlink. I have also been using the 471A for AO-10 uplink and 271A and turnstile on the downlink. I have not had any success with FO-29 and FO-20 but it is just a matter of time. By the way, I have the old Cushcraft AOP-1 mounted on a ten foot pole in the yard with no rotor yet and turn it using the "armstrong" method. The AOP-1, by the way, is a two meter and 435 antenna combination on a short boom made for satellite work. With the AOP-1 I have uplinked to SO-35 and AO-27 using an Icom 2SAT on transmit and Icom R1 on the receive. I am picking up things as I go to upgrade the antennas such as mast mount preamps, better coax, and looking for the fancy rotor but am in no hurry. I am having too much fun working the birds on my shoe string station. By the way, I have worked 300 DXCC countries on HF but none of it compares to any of my satellites contacts. Look for me or listen on RS-13 downlink (29.475 mhz) I try to make most day light passes. Hope this helps. Pat, K4AVO

Hi Bill

PC-Track is one of a few programs that appears non-Y2K compliant. I have never managed to trace the author of this very good program. I think you will have to transfer yourself to another one. I recommend the freeware program by David Taylor:
http://www.davidtaylor.freeserve.co.uk/software/wxsat/satsignal.htm

the link to wxtrack is the one you want.

best wishes

Lawrence Harris

I found the variable name bug and compiled it OK on an earlier system,
but it wouldn't accept any new elements, and I never found why it kept
getting the checksum wrong. If it has a date bug as well, I probably
won't bother again. :)

The restrictions on the new SatTrack are especially bizarre because any
non-US organisation with the resources to successfully design, build and
launch satellites (who are presumably the intended target of the
restrictions) are unlikely to be deterred by not being able to buy
SatTrack. >:|

I must say I have never seen such difficult problems with SatTrack.
I have been using it from about 1994 and I recently fixed the 3.1.6
version for Y2K with only a single change. Checksum problems are unknown
to me, I get the elements from celestrak.

>The restrictions on the new SatTrack are especially bizarre because any

The restrictions are bizarre, period.
I find it especially amusing how they seem to assume that the are the
only ones that can develop things, and that some of their enemies are
unable to do so and can be prevented by hiding any software from them...

>>Apparently it has now so many features that it is considered a

Yes, you can. When bester publishes a book with the source code, they
can export that and you can buy and type it into your computer without
problems with export laws.

A certain encryption program was exported from the US into the free world
using this method.

A few times I have seen calculations about the EIRP that one would need
to access the next satellite that AMSAT (or someone else) had constructed
and that was to be launched. Often that EIRP was indeed sufficient
shortly after launch, but one AGC time constant later it fell short by
at least 10dB.

However, to generate the theoretically required EIRP one usually would not
need 50-100 watts of HF, not even with a smaller antenna.

I don't understand what you mean here. I wanted to say it will be more
attractive to use a yagi. But of course you can use a dish, just put a
small (crossed) yagi or helix in front of it as a feed.

I have seen a demo by ON6UG a couple of years ago of a system setup that
way. Maybe you can locate pictures in some AMSAT publication.
He used 2-el yagis and helices with a dish of some 2 metres.

>>to work P3D and you will have the disadvantage of having to track very

>follows would be no problem for the dish control setup I have envisioned.

The orbit of P3D is such that it will not move much for extended periods
of time, but only as compared to LEO sats. I don't think it will be
stationary enough to keep it within the beam of a 3M dish on SHF bands
for very long. But perhaps you should just put some of the demo keplerian
elements in a tracking program, and see for yourself if it meets your
requirements.

>What transverters, circuits are folks using or going to use.
>Recommendations? I failed to take advantage of the Drake equipment project
>when it went around so I fear I must now go another route..

The difficult problem is that we first have to wait and see what kind
of transponder setups are going to be used apart from the old 2/70/23
standards for which many stations have equipment. 23up/13down could be
very attractive, as on 23 there is still some commercial transmitter
equipment and a receive converter is easier and cheaper to build than
a transmitter. Also, on 23 it is easy to make 10W. 13cm downlinks have
been tested on earlier sats, and the users were always reacting very
enthousiastic. If I remember well, the P3D powerbudget is such that
you can operate in this mode with only a small (say 60cm) dish, e.g.
as used for Ku-band Sat-TV.

Source record: 10792

The AMSAT site has the "Official Transponder Frequency Bandplan for P3-D" listed. Basically, I see 1.2, 2.4, 5.6, 10 & 24g to be the bands I need to implement here. The 5.6, 10 and 24g bands might be on the dish, depending on what my studies produce as viable alternatives. DSS dishes are found at the curb on trash day...

So, five (5) bands to add to the tangled mess I call my shack. Is anyone else working in this direction? What is an inexspensive/high performance (is this possible?) route for the newbie to follow. Would multiple dishes (ie. one for each band?) be more effective than one dish with multiple feeds?

I have been stealing info from the W1GHZ site, which is a great resource! I am still thinking cheaper is better. Milliwatts output (any band) and gobs of receive gain provided by a BIG dish (BUD)...

Carl, there's a fix/patch already on the AMSAT web site for the problem you describe. I used it on my Pentium 350 at home and 400 at work, and it works just fine. I understand that the v1.5 for y2k is still in the works. Any time now?

Hi All:

Ive been trying to update time on my PC via calling National Bureau of Standards from within Instant Track. When I get through the time does not get updated and I get in some kind of loop until I hit esc. Imagine its some kind Y2K problem.

Anybody know if that is the case or if its something Im not aware of?

Thanks,
73 de Dave, N0IT

Yes, new callsigns should be restructured too. They should look like the
old CB callsigns of the early 1970's. This will work out OK because the
restructured hams won't be much smarter than your typical CBer anyway.

RESTRUCTURING.
> >

There isn't any change there with restructuring. New licensees
will be issued systematically calls appropropriate to their license
class. Being that no NEW license classes were created as a result of
restructuring, the current system will continue and those licensed
after April 15th can apply for vanity calls once they are in receipt
of their license. I.E. a new technician class licensee who is issued
a license after April 15th can apply for a vanity call from Groups
"C" or "D" once they have their original license. Being that the
advanced class license will no longer be issued after April 15th
to NEW applicants, new applicants will have to upgrade to extra
to be elgible for group "A" or "B" calls. So a NEW extra class
licensee after April 15th will receive a systematically assigned
from group "A" if they are still available in the applicant's
region, or a systematic call from group "B" if group "A" calls
are no longer available in that region. But the licensee can apply
for ANY unassigned call that is available to amateurs within CONUS
if the applicant is applying from CONUS.

You dont need to restructure the call signs to know who the new hams are,
just listen for anyone using 10-codes, CB lingo, and echo mics. You'll be able
to spot the new idiots a mile away.

That's right!! You'll be able to tell them from the old idiots who
persist in bad-mouthing any newbie who doesn't 'fall in line'
with what they 'had to do' to earn their wings.

Sorta reminds me of the old farts who sat around when I was
a kid telling old WWII stories about how they each won the war.

Just as pathetic, and just as pointless.

The real shame is there will be a few of the newbies who will be
mesmerized by the old farts, and become one...

You don't have to know ohms law to be a current extra yet some are
still to lazy or inept to make the grade.

That existing advanced class ham should take element 4(B) immediately
and so be eligible for an extra class license in April.

Isn't it funny that all these type of posts come from the crowd that
is on the outside (can get on HF) looking in. Quit your whining and
learn what is necessary to get on the hf ham bands and act like an
amateur not a neanderthal (CBer).

Yes indeed, its all in the best interest of Ham Radio..sure it is! Look guys, it has nothing to do with the CW requirement. I am 110% in favor of the CW requirement, but the truth is Ham Radio began its demise when the FCC stopped conducting exams. We all know that the VE system is of questionable integrity. You can read about bogus testing sessions every month in QST and other Ham rags. And those are only the ones that got caught! Just think, now any half brain dead idiot can go into a VE session, conducted by his buddies, take a 35 question exam, which he already knows the answers to, and come out an Extra! And this is GOOD for Ham Radio! Somebody explain that to me. Or should I say "rationalize" that to me. I may not be the nicest or smartest Ham in the world, but I'm sure not stupid either. This is definetly The End of Ham Radio. Do you really want to be associated with persons holding Extra tickets who do not know the difference between a 9 volt battery and an oak tree?
I don't.
I guess I must be confused, but I always thought if I EARNED something, it would have value to me and I would respect and take care of it. How much value can you place in an amateur radio license that is easier to get than a parking ticket?
Good bye Ham Radio, it was nice knowing you.

> value can you place in an amateur radio license that is easier to get than a
> parking ticket?

You apparently suffer from a lack of self-esteem.

If YOU are a courteous operator with wide, deep technical knowledge,
then YOU are a valuable radio amateur. One could match my description and
hold a General license or below, or even no amateur license at all if you
worked, say, in military or commercial communications.

But it seems that this isn't enough for you. You crave that piece of paper
which says "Advanced" or "Extra" on it, not because of what YOU are and
what YOU have accomplished, but rather because of the mark the LICENSE
PUTS ON YOU, because of the "specialness" it confers on you, because of
the "distinction" which you believe it will afford you.

If that's all you want, just have a fancy, official-looking embossed piece
of paper framed and put on the wall next to your $3000 general-coverage
receiver. Only a tiny handful of people will know the difference.....

Does that mean that us amateur extras, who passed a 20 WPM
test without a doctors excuse note, can start signing our callsigns
"stroke 20" as a designate kinda like the "interim KT, temporary AE"
that was so prevalent on two meters back in the early and mid 1980's
?

i couldn't agree with you more, and think i just might sell out, they are
just giving the bands away, but one thing, at least they are keeping some
code, that will still keep some of the cbers out, but 75 meters allready
sounds like 11 meters anyway. i got my extra back in 1989, and passed all
the code requirements, and i am blind on top of all that.

Every no-code tech knows the difference between a 9v battery and an oak
tree. The oak tree tastes woody when you touch it on your tongue!

i feel that way sometimes watching the posts here in usenet. not just
in the ham groups.

anyone can go down to wally world and buy a computer and get on the
internet, but i don't ask them if they have any computer knowlege of
worth before i 'converse' with them.

interesting analogy. most of the people out here in the net are
appliance operators but noone 'blackballs' them.

people will visit websites that were 'generated' by an expensive program
just as much as a website built with notepad. the content is what
counts.

weird.

Correct in part

However, the problem doesn't reside with enforcement. Even though more proactive enforcement, at this time, sounds good. And it may well be - as long as it doesn't get in the way of legitimate operations.

The fault falls squarely on those that refuse to obey the rules.

It's like trying to blame the sprinkler system for burning the house down. The renter shouldn't have tried to barbecue his chops using the kitchen table as a grill. He's the one that started the fire - not the sprinklers. (To stay with the ham analogy, if someone hadn't turned off the sprinkler system it may have been possible to save more property and lives before the house became an ash pit)

You want to blame someone? Blame those that abuse the privilege of operating in the amateur bands, as if it where a right.

Being that the restructuring R & O leaves existing
amateurs unaffected, advanced class licensees can apply
for vanity calls exactly like they have since the system
went into effect in 1996. No NEW advanced class licenses
will be issued after April 15th, but those who already
hold advanced class licenses can apply for vanity calls
under existing guidelines.

Debian 2.2 packages are available. You can download them from
ftp://ftp.rising.com.au/pub/hamish/sattrack

or for Debian 2.1

ftp://ftp.rising.com.au/pub/hamish/sattrack-slink

I have converted these to .RPMs for Red Hat (untested):

ftp://ftp.rising.com.au/pub/hamish/sattrack-rpm

They include the Y2K fix Rob posted on this group.

****

The code provision had to remain due to treaty. The ITU requires that all amatuer licensees operating under 30MHz must have proficiency in code. The ITU does not mention at what level is considered proficient. I got my Tech class license in 1977 and the 80 M band was not any better than it is now. I also have a BSEE degree and feel that element 4A and 4B are easier than many of the EE classes that I took. I just see no need for element 1B, and 1C. To me it does not mean I will operate on 3890 KHz any better or worse. Besides to operate on 80M phone you must have to operate with a general class license or higher. Until 4/15/2000 that still requires a minimum of 13WPM code. If I were to try and draw some conclusion from you post, it may seem that as one becomes more proficient in code, one becomes a better operator. BUt at this time I will try and refrain from such endeavor.

103. Radio Meteor Obs. Bull. December 1999

Newsgroup: rec.radio.amateur.space
Date: 2000-01-08 00:00:00 UTC
From: steyaert@vvs.be
Message-ID: <387772f5.31487564@news.innet.be>
Source record: 10637

Radio Meteor Observation Bulletin No. 77 January 2000

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Note:
. * local interference or propagation opening

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz
Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg

Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: CW
Recording method: listening by ear

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)

Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 1 hour)

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. strong Geminids activity on December 14-15

Pierre De Groote

Observer: R.B. Minton
Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg
???? FM ? kW, Juarez Mexico, dist 579 km, geogr azim 198 deg
KWFM FM 90 kW, Tucson AZ, dist 798 km, geogr azim 233 deg
Antenna: folded dipole, on 6.3 m high mast, oriented N-S
Receiver: Subaru 12 V DC car radio with digital tuning
Observing method: conditioned audio input in the game port of an IBM 386 SX-50 PC, 128 samples/second, DOS/Basic software, automatic

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Notes:
. Leonids outburst was observed on Nov 18, at 02h UT and from 16h UT
to 21h UT
. the peak of Geminids activity was observed on Dec 14, 18h UT.
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
LT = local time = JST = UT + 9 hours

Sadao Okamoto

Observer: Ton Schoenmaker
Location: Roden, Netherlands (06 26' E, 53 08' N)
Frequency: 55.274 MHz
Transmitter: Spanish TV channel E3 (video); transmitters in La Muela (30 kW),
Gamoniteiro (50 kW) and Aitana (60 kW); all stations within
100 Hz of nominal frequency; distance 1650 km
Antenna: 4-element horizontal Yagi, geographical azimuth 105 degrees (ESE),
elevation 15 degrees
Receiver: Yupiteru MVT-9000 in FM mode; sensitivity 0.5 uV at 12 dB S/N
Observing: audio (noise) signal from ear-phone socket was rectified and
recorded with a Servogor stripchart recorder with a chart speed
of 120 mm/hour

In the table below the uncorrected hourly counts for signals stronger than
0.1 uV are given. The activity on 21/22 December may be considered to be
caused by sporadic meteors.

| December 1999
```

Note:
. The somewhat uncommon geometry described above (receiving antenna pointing perpendicular to the directions of the transmitter) resulted in a peculiar observability functions, so the counts are difficult to interpret in terms of Geminids activity. Apparently the observability function peaks at about 23h UT when the main lobe of the 4-element yagi points to the radiant of the Geminids.
The highest activity occurred on 13/14 December 1999 with counts of about 4 times the sporadic level. For the midpoint between The Netherlands and Spain the setting and rising of the radiant occurred at 11h30m and 15h30m UT respectively.

Ton Schoenmaker

Observer: Pierre Terrier
Location: Canet, France (3 36'E, 43 41' N)
Frequencies: 102.5 MHz
Transmitter Location: Several, which complicates things!
Antenna: 5-element Yagi FM, horizontal polar.
astronomical azimuth 90 deg (W), elevation 20 deg.
Receiver : FM Tuner Kenwood KT-54 L
Observing method: Electronic interface on LINE output audio signal are fed in COM1: of Laptop 486.

METEOR v 2.05 processes the signal and records on hard disk the
time of the events.
METEOR parameters: SAMPLING = 120, THRESHOLD = 0.8, DELAY = 30 s

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna: Comet made 50MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 860-890 Hz voice signal (by FFTDSP) is
received by a low frequency filter (850 Hz)and fed into
the D/A converter and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENTS: French frequency list, COLORGRAMME METEOR

Date: Fri, 17 Dec 1999 08:17:44 +0100

Hi METEOR user,

If you are in Europe and radio-meteor observer see this web address for the french frequency of the transmitter in France :

http://www.brume.org/radios/

Date: Sun, 19 Dec 1999 12:28:54 +0100

Hi METEOR soft user!

I am happy to announce you the creation a new software, that is going to help you in the visualization of your data.
COLORGRAMME METEOR is a Windows 95/98 (free) application especially for meteor observers! For more info, go to:

http://membres.tripod.fr/meteor_astro_elec/us/color.html

Regards,

Pierre TERRIER

LEGAL CABLE TV DE-SCRAMBLER

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV Descrambler
You can assemble it from Radio Shack parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A DESCRAMBLER LEGALLY

Warning: You should not build a TV Descrambler without
reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the descrambler work on Fiber, TCI, Jarrod
and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing cable system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a Descrambler LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

Cabletron FREE-TV
12187 S. Orange Blossom Trail #116
Orlando Fl 32837

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

While scalding, that was very well said Nick. I indend to get my license someday. This is a very VERY new interest of mine, and I go into this interest late in life at the ripe old age of 26. I'm going to be taking some electronics classes at a community college in the meantime. Your remarks while scalding, are well said...

Nick,

I think suggesting people who take pride in acomplishments should
simply forge their acomplishments to save work is a very poor
suggestion.

I can't imagine why that would make anyone feel good about themselves.

>While scalding, that was very well said Nick. I indend to get my license

Since you think Nick spoke the truth, Does that mean you intend to
forge a license, as Nick suggested?

This all seems very strange to me. No wonder its so difficult to find
skilled help today. I'll have to check closer and see if the
credentials are forged or real. I had no idea this was going on.

No, no, no....I wasn't recommending that a LICENSE be forged. Just put a
piece of paper with some bogus writing in a nice frame, hang it on the
wall by the expensive rig (I didn't say that he needed to USE the radio),
and then the gentleman can have ALL of the satisfaction which he appears
to derive from his amateur radio license: A FANCY, OFFICIAL-LOOKING
L_A_B_E_L, nothing more. No need to even power-on the rig!

He said it himself, the LABEL has lost its value now that it doesn't set
him apart anymore (after restructuring). I'd like him to have a nice,
fancy, official-looking label again, so he can feel good about himself
again. If he does what I suggest, he can have the nice, fancy,
official-looking label back, but without wasting all of that time on the
distracting AMATEUR RADIO stuff.

> forge a license, as Nick suggested?

No, it means that he's getting his kicks from RADIO, not from the piece of paper. It means that he can tell the difference between a superficial label (a piece of paper) which says "amateur radio" on it, and being an actual amateur radio enthusiast (unlike the gentleman to whom I was responding).

I didn't understand him to say he was proud of the paper and ink, I
understood him to say he was proud of his efforts.

I'm not sure what the politically correct view of people who take
pride in acheiving goals through work is today. It may have changed to
the point where being proud of accomplishments is consider a flaw.

My opinion is probably out of date, at least according to the Ted
Kennedy school of water rescue standards. But I think he has every
right to place value on what he has earned.

IMO, suggesting someone forge credentials to be "proud" is shameful.

The advanced class won't vaporize after April 15th, while
no NEW advanced class licenses will be issued, existing
advanced class amateurs will be able to hold/renew their
licenses indefinitely and as such will be able to apply
for vanity calls under existing rules.

I suppose if you want to sign as "/20," to show
that you actually took element 1C and passed it
rather than upgrading on the basis of code exemption,
sure go ahead and do it. I'm not trying to defend
"resturcturing" as it came out in the FCC's final
R & O in December, but it's a done deal and I onlyActua
offered comment on how it affects currently licensed
amateurs. No doubt that many dislike the "5 WPM
fits all" aspect of restructuring, if you feel strongly
about it, you're perfectly free to petition the FCC
on the subject and ask that the 13 and 20 WPM code
elements be reinstated. If you are a VE, you can
renounce being a VE, return your VE credentials and
no longer participate in licensing new amateurs under
resturcturing.

> parking ticket?

You bring up a very good point, and one that I agree with. I have never
been a fan of the VE system, as I know that the temptation by the
average citizen to abuse the system is just too great to allow them to
be trusted with the responsibility. I personally know VE's that have
"slid" people by with both theory and code tests (In fact, I was offered
a code "test" by one group, which I politely declined). I know of other
groups that do it for money ($200 for general, $300 for extra).

Back when the FCC administered tests, you had to deal with the
inconvienience. You had to go on THEIR schedule, you had to wait to
retest, and it was very difficult to "cheat" the system. Only the truly
dedicated would put up with this, in order to get their tickets. Maybe
if the license fee were re-instated and set at a level of something like
$50, the FCC would not be so quick to get out of the administrative
department, and the "quality" of the ham would be much better as a
result.

But in today's air of "instant gratification", many people are too
impatient to go through this exercise.

Is ham readio dead? No, but it is losing its uniqueness, and sterling
quality.

Dave

Yes, but look at the other side, with the testing requirments as they
now stand, a person with substantially LESS technical knowledge, skill
and discipline can obtain a high level ham license, with little actual
work. So the "value" of the license has been degraded, since it is no
longer necessary to be a "tech whiz" to get one.

> But it seems that this isn't enough for you. You crave that piece of paper

> the "distinction" which you believe it will afford you.

It's no different than the bogus network "certification", that
Mickey-soft and Novell started for computer professionals. It's a piece
of paper, that says that you know something. The difference is that MS
and Novell are making big bucks off of everyone that studies and takes
the test. But it's only worth something if you recognize the validity of
the testing methodology.

Once upon a time, a ham license looked good of a job application or
resume. Participation in what was then "the" technical hobby, was a
testimony that the job applicant knew enough to pass the tests, which
meant something to a manager looking to hire technicians or engineers.

Today, that is no longer true, except for some specialized
communications fields.
>
> If that's all you want, just have a fancy, official-looking embossed piece

>

Maybe we just want to make sure that everyone who plies the ham
frequencies has enough technical knowlege to keep them out of trouble,
and enough responsibility and maturity, that they won't cause trouble.

And it is still true that the value something has, to its owner, is
directly proportional to how much effort one had to expend to get it. If
you had to apply yourself for the better part of 3 or 4 months preparing
for, and passing the test for a ham license, you will be less likely to
abuse the privilege, than someone who just signed on the dotted line.
That's human nature.

Dave

So this is what I have to look forward to, huh? I'm sorry, but I resent the hell out of your sentiment that every new ham is an "idiot" or a "CBer". I am studying for my Technician's license (ready to take the test at the next hamfest) and look forward to advancing in the amateur radio service, despite the less than gracious welcome mat that you folks have laid out. The focus of Amateur Radio is helping people through the understanding and application of radio communications theory. From what I've seen, other than relaxing the CW requirements somewhat, the FCC hasn't lowered the entrance requirements to the point that it doesn't require hard work to attain the various level licenses.

I'm not meaning to single you two gentlemen out, I've been reading similar posts for awhile now and decided it was time to speak up. There are some of us who are just getting started in amateur radio that could use help and encouragement from the more established hams. I understand your anger, but you should be careful not to do more harm than good by callously tossing out such comments. Dig out your ARRL Handbook and read the Amateur's Code, based on this and similar recent threads we seem to have lost sight of something important.

Respectfully,
Mike

Hi Matt,
You would find it unlikely to receive the GE bird in the UK as it is at 85 deg west and over our horizon I dont think it is currently encrypted but I am not certain of that.. I have been patiently trying to find someway of getting a transponder to carry it 24hrs in our region but so far no luck.

The ESA are currently doing some small amount of space TV via Eutelsat to see morew go here http://television.esa.int/
they do have a little Nasa tv every now and then like launches etc but appx only 30 mins a day and you will need a digital "free to air" satellite receiver like the Nokia mediamaster to get it aswell.

Mike, take a chill pill. Hams are NOT a progressive, techno-weenie bunch... but don't pay any attention to me, I'm just a new kid licensed at age 16 in 1963 and always amazed at how few other hams ever built or repaired any of their own gear. Hams, as with other humanoids, resent change in any form.When the Novice license was first introduced, even with only a 1-year non renewable license term, it caused howls of protest from many existing hams. In my time, I have seen the Conditional license come and go, the Tech license changed to limited HF (10-meter SSB and Novice HF CW) privileges, Novices extended to 220 phone and 10 Meter SSB and renewable licenses, with similar howls of protest and ads "Selling OUT, Novices and Techs BAH HUMBUG", etc. In reality the dreaded CB'ers have provided more skilled and reliable operators, during the CB heyday of the 1970's, than probably any other source of ham operators. Without them ham radio would have dwindled much more quickly than otherwise. Without the recent (10 or so years ago) influx of new Codeless Tech hams, we olde farts would have almost nobody left to talk to on the radio, storebought or otherwise, by now.
I've read the FCC enforcement lists in QST since first licensed, and the great majority of raging interference, license revocations for profanity, jamming, and other undesirable behavior, come not from new hams but from Advanced and Extra Class licensees. I'm over 50 now and still feel like a kid when attending hamfests and club meetings full of white haired, wheelchair bound, aged hams. My hair is getting ever whiter, and I hope that you go ahead with your interest in ham radio, and that others like you get into ham radio in spite of some of the weirdos you'll run into. All hobbies have loud weirdos, so don't worry too much about ours.

> K2TL

I have a real nice car. It drives like a dream. It's good on gas. It's
really nice-looking, too. I worked hard to get it. It cost me a lot of
hard-earned money. But yesterday my neighbor was given a car just like
mine. So now I guess I have to hate my car. It no longer has any value
to me, because if my friend can get one for "free", and go out and
drive the roads same as me, well that's just not fair. He shouldn't be
allowed to have that car unless he worked just as hard for it as I did
for mine. With him driving the roads, all the fun of it is gone for me.
My car just looks ugly to me now. So long car, guess I'll just walk.

No offense, K2TL, but your reasoning is lost on me. How about taking a
little more positive view? With your years of experience, you can make
a big difference in the way things turn out. You can be a force for
helping the upcoming youngsters be better hams, learn how to do things
the right way, you can be an example and a teacher. You and I have both
been in this game 35+ years...we used to call them "elmers", didn't we?
We don't have to let Ham Radio slip away, let's do something positive.
Let's start by talking positive, not negative. Let's work with the hand
we've been dealt, like we have for all these years, and make it work.

You didn't take away anything, but the FCC sure did!

It's typical for those who dislike working for something and who
expect handouts to not understand why some people have pride in what
they accomplished.

With that in mind, I understand why you agree with the suggestion
people just forge documents that are symbols of what they accomplished
in life.

But I think picking on a guy who is proud he worked for something is a
sign of just how bad our society is getting. Socialism at it's finest!

So what? Are you interested in collecting licenses, or are you interested in radio? If you're interested in radio, then your license is just as valuable as your radio skills, no more and no less. If you're interested in licenses, then, I dunno, take-up fishing. You can get a license from every state!

Here's my angle: I am looking at the person, not the paper. I guess that I'm too old-fashioned, eh?

> And it is still true that the value something has, to its owner, is
> directly proportional to how much effort one had to expend to get it.

Congratulations! You have identified the problem: The man is obsessing on "getting it". Getting what? A piece of PAPER. Forget the piece of paper. What matters is the knowledge, the experience, the fun. Paper is made from dead wood.

Licenses are not degrees. They are no more than permits. Thier value
should be nominal. You should evaluate an individual ham by his/her
actions, not by his/her license. Besides, one doesn't really need to be
a "tech whiz" to be on air. But for those that are "tech whiz's", well
congratulations. If "tech whiz's" are looking for paper recognition
(which is silly in my view), then perhaps a note or something could be
atached to his/her license -- however, there is no need for assigning
radio permissions based on this.

Are there people getting paid on the basis of their amateur standing?
Sort of gives new meaning to the term "amateur".

Regardless of how long it takes to study for the ham exam, the exam should nonetheless be relevant to the requirements of operating ham radio. That is, while the exam should take into consideration requirements, it should not place too much emphasis on those things that are merely desirable.

I too have my Extra ticket. I am not too worried, the foul mouthed individuals who are on 11 meters or 3950 don't use CW that often. I use CW almost exclusively. As I see it, the AMers an SSBers and FMers will have to bare the brunt of a new class of lids. 20 CW will be safe foever,

: the test. But it's only worth something if you recognize the validity of
: the testing methodology.

Funny. I just received e-mail from MS today - offering their Certified
Network Engineer (or whatever it is) class. The cost is $8000, but they
pay me $10,000 when the class is completed.

: Maybe we just want to make sure that everyone who plies the ham
: frequencies has enough technical knowlege to keep them out of trouble,
: and enough responsibility and maturity, that they won't cause trouble.

The knowledge requirement went away as soon as they started publishing
the question pools. It then became a matter of memorization.

Nothing in the Amateur testing has ever guaranteed that the person would
be either mature or responsible - or that they wouldn't cause trouble.

: And it is still true that the value something has, to its owner, is
: directly proportional to how much effort one had to expend to get it. If
: you had to apply yourself for the better part of 3 or 4 months preparing
: for, and passing the test for a ham license, you will be less likely to
: abuse the privilege, than someone who just signed on the dotted line.
: That's human nature.

Maybe. Or maybe someone who had to work hard would ignore legal
requirements when he/she though it possible to get away with it,
as a "right" for having to work so hard.

I don't know why the old Extra holders are so upset about the new rules.
It does not degrade THEIR efforts, or lessen the value of their licenses.

Remember when you had to hold a license for 10-20 years (I forget how long)
before you were eligible to apply for an Extra Class license?

Personally, I feel that the publishing of the question pool is wrong, but
it is only my opinion. I believe a person should have practical knowledge,
not just a bunch of memorized information.

On the other hand, I have more respect for the recent no-code tech who
behaves himself on 2 meters, and maybe plays with packet radio a bit, than

I do for the notorious groups of troublemakers on 75 meters and elsewhere.

Brush up on your 10-codes Boys.

The CB-RL, Citizens Band-Relay League in Newington, CT, is
going to update their Operating Manual with a section on 10-codes
and CB Lingo so old Hams can understand what the new hams
are talking about. There's also going to be a section on how to
properly tune a transmitter for maximum over modulation & Splatter.

Amateur Restructuring, Liberal Democrats, and No-Coders.

The FCC's restructuring plan shouldn't be a surprise to
anyone. After all, it comes out of the Liberal Clinton
Administration. Conservative republicans are willing to work hard
for their rewards, but Liberal democrat No-Code CB whiners want
everything handed to them on a silver platter. The democrat
whiners want to get ham licenses as easy as they get their welfare
checks. And the Liberal FCC, part of the Liberal Clinton
Administration gave the Liberal No-Code CB whiners what they
wanted, and the rest of us got shafted. Liberal Democrats like
to steal treasures from the hard workers, and give to those who spend most
of their time waiting for another government hand-out. When liberals do
this, it makes them feel important & needed.

restructured Ham = Welfare Ham.

No. Surely by getting on air at 20 WPM plus, you do not need the
callsign and piece of paper as proof. Unless, of course, the callsign
and piece of paper is just a status thing.

Amateur Restructuring is not a simple, one-sided issue, although many would like to force the many different viewpoints into one small box.

Times are changing, and whether we like it or not, there are realities that have to be faced. Here are a few.

The "magic" of your voice (or code) traveling thousands of miles is basically gone. I'm old enough to remember well the first color televisions, trans-Alantic TV signals, etc. When I first experienced amateur radio (as an early teenager), it was beyond belief that you could actuall talk to someone long distance wireless. I was even awestruck at some cheap walkie-talkies I owned! Now, we communicate effortlessly worldwide via the internet, instantly.

Commercial interests want more bandspace, and amateur radio operators who are time-frozen in the past have a poor argument to occupy valuable spectrum space to discuss their gall bladder surgery, latest bowel movement, etc., simply because they grunted it out years ago to meet the requirments of 13 wpm, and so on. Amateur radio was intended from the start to focus on public service and to encourage growth (in electronic knowledge). It was never intended to be a static, backward-looking social club, remembering the "good ole days". The very nature of amateur radio points forward.

The technical aspects of amateur radio have changed incredibly. Twenty years ago, you could still work on your own car (plugs, oil change, tune-up). Check out the lastest cars, and tell me how much you understand. The people I first met in amateur radio built their own rigs (early 60's). Today, that same rig would splatter unacceptably all over the band. Then, most built their own. Today, probably 98% use quality, name brand, sophisticated rigs, with tight specs on both transmit and receive. It's a changing world.

YES, some things could get better. Getting rid of the corruption in the VE program would help. Riley Hollingsworth has been extremely good news for the hobby. But perhaps we should require computer aptitude tests as part of the hobby (to weed out the old farts). Maybe we should ban discussions of all personal health problems, not to mention useless nets, that accomplish little. Simply passing the CW and written test back then is not a lifelong license to sit back, and reap the "reqards" forever in careless, meaningless blabber. I have always been in favor of amateur radio operators having to provide "evidence" for their continued re-licensing, such as proof of public service, classes taught, projects involved with, etc, much as medical

professionals have continuing education to keep them sharp. One statement the FCC made in their R&O was that there was basically no correlation between those who learned CW, and those who were proper station operators, or were significantly involved in public service. I couldn't agree more. What right does a 30-40 year Ham veteran have to needlessly blab on, using maximum power (or more), with poor antenna matching, and generally abusing the spectrum. Yet, that person is exactly the same person who will argue themselves blue in the face about the need to keep the code, etc. They need a reality check.

There is plenty to compliment and plenty to criticize in amateur radio today. I compliment the FCC for having the guts and sense of REALITY to not only face the real facts of the day, but to do so in a way that doesn't necessarily favor any special group, including the ARRL. Hopefully the tests, method of testing, band usage, etc. of today's amateur service will improve, and retaining CW at previous rates was not solving the problem. Kudos to the FCC for being willing to move forward with guts rather than look backward with failing memory.

I'm in my 50's, and hopefulle young enough to still engage and enjoy the new realities and technologies that emerge each day. However, the "tomorrows" are owned by the young, and I hope I have enough sense and graciousness to know when to get out of the way. The FCC has taken an important first step. I hope during the year 2000 that they and the amateur community can find some good solutions to the problems we still face and better use of the privileges we enjoy.

License restructuring started under the Reagan and Bush adminstrations
(the no-code license).

Everyone should get back to the real world.

The only thing to come out of all of this will be a sudden surge to "higher class tickets" (that won't really be the same techinal standards as higher class tickets from the past) and more phone band congestion.

There won't be any massive influx of new hams, and the hobby won't suddenly "turn around" and grow.

Testing never stopped the large majority of people from upgrading. It was only the people who lack memorization skills or enough motivation to spend a few hours a week memorizing the test who failed to upgrade.

The lowering of standards has never "pumped new life" into anything.

It'll make lazy people happy, and Kenwood will sell a few radios. Then in a few months it'll all die off and many people will start crowing "why don't we reduce requirements even more?".

If you doubt this, look at CB. CB fizzled desipite essentially being a "free band" with no enforcement and no license required. The only thing that was gained were manufacturers made money selling radios, and the low end of ten meters and proper users of frequencies in and around the 11 meter band were ruined in the process.

Vince,

Being a Republican with a strong Libertarian streak, I must ask, just what does Morse code have to do with radio? I mean, telegraphy(sp?) originated on wires are you using it to communicate these long diatribes?

I certainly hope you have done something to further the art of radio communication than manually operating a spst momentary switch and acting as a bio-modem.

Morse code can be fun, and I am personally pushing for my 13 WPM, maybe even 20, but it is for fun. Logically, it has zero to do with the theory, operating practice, or development of Amateur radio.

Please stop crossposting these posts to the sat group. I know not much goes on here, but this condescending saber rattling is NOT on subject.

Thanks

Christopher Cox
KC8FRJ

PS look at the bright side, this initially should have little impact on the A1 band allocations, and possible band crowding may spur more op.'s to use CW as a communication method.

Frank, no-nonsense comments that are pretty much on the mark.
Unfortunately, while those of us who already see the light, will agree
with you, those that refuse to accept another perspective, will argue
their dogma until the ground reclaims them. What's that about teaching
an old dog new tricks?

Like the old saying, "try to tell a nut that he's nuts, and he'll swear
that you're crazy".

Dave

Then why to people go to college to get a degree? That "piece of paper",
like a ham license, is a symbol of what you've endured in order to EARN
the privilege of being what you are.

I know sveral "computer whiz" guys, that are 100% self taught. They
attack thier hobby, with intense enthusiasm, and are probably as smart,
if not smarter, than "book taught" college guys. But you know what? when
it comes to finding a high level computer job, they have it tough
because they lack the PROOF (the piece of paper) that says that they
really know what they are doing.

> Here's my angle: I am looking at the person, not the paper. I guess that
> I'm too old-fashioned, eh?

You cannot ascertain, with any certainty, the level of qualification a person has, through a simple personal interview. Remember, you might LIKE the person, but the fact that he shot a 65 on the last 18 holes, drives the same kind of car, and has a hot looking girlfriend, mean nothing as far as far as job qualification goes. Any documentation, licenses, degrees, etc, that someone has is a testament, to their skill level. A ham radio license used to be highly regarded in that vein. Today, that is not as true.

>
> > And it is still true that the value something has, to its owner, is

>

The "piece of paper" is only a symbol. It's what it stands for that's important. A ham radio license is only the starting point. Hopefully, a person will learn more after being licensed. But for many, the achievement of the license, is acknowlegement that they've reached a milestone in their goals. Life is but a series of goals. Why diminish the value of someone's goals?

Dave

> should be nominal.

The license is basically a permit, but it is also the permit to operate some potentially dangerous equipment. Equipment that can cause harm in some cases, and interference in others, if not operated properly. By passing the "permit" exam, you are basically providing proof that you know enough (in theory) to stay out of trouble. If for no other reason, that is what makes licensing necessary.

Why do we license drivers (Other than the cynical answer "to fund the governement via fees")? Would you feel safe on the road, if you were aware that people did not have to pass some minimum skill and safety testing before being allowed out there with you?

> You should evaluate an individual ham by his/her actions, not by his/her license.

True. But that still does not diminish the value of the license as a certification.

> Besides, one doesn't really need to be a "tech whiz" to be on air.

Ask any CBer and he'll agree with you. But is that what we want for ham radio?

> But for those that are "tech whiz's", well congratulations. If "tech whiz's"
> are looking for paper recognition (which is silly in my view), then perhaps a
> note or something could be attached to his/her license -- however, there is no
> need for assigning radio permissions based on this.

There certainly IS. I'm sorry, but you can't tell me that a person should be given the responsibility to run a 1.5 KW station, with variable frequency control, with the potential to cause harmful interference, harmful radiation, and the potential for self injury if used improperly, without some form of testing first? That's insane! The more you know (and can demonstrate) the more privileges you should have.

If you just want to yack with your "bro's", then use the internet,
phone, or stick with low power radio services. That way you can't hurt
yourself or anyone else.

It's an analogy. You drew the wrong parallel. This has nothing to do
with who's getting paid for what. It's about the recognition of
certification, and the value that it projects.

>

No arguement there. But the line between "required" and "desirable" can be subjective. What's required to you, may not be for another person. That's why we have the FCC, who hopefully has the foresight to make that decision in an unbiased manner.

Dave

I didn't say that the current testing was perfect. I agree that you
should be required to LEARN the materrial, rather than simply memorizing
Q&A's.

> Nothing in the Amateur testing has ever guaranteed that the person would
> be either mature or responsible - or that they wouldn't cause trouble.

Nothing in the driver's license exam guarantees that either. But
hopefully, it DOES show that they've achieved the very basic minimums,
and hope that the person has some common sense as well.

That is certainly one distroted way that some people view life. Some
people think that they have more "rights" than they are entitled to.
This sort of "spoiled thinking" is based on, IMHO, having never been
taught the meaning of the word "NO" as a child.

>

Also agree! Many old timers put down the no-coders, under the
mis-informed, preconceived, sterotypical, notion, that no-coders are
nothing more than CBers. I don't think they will even get it through
their thick skulls, that there are some really talented communications
guru's in the making on VHF/UHF thanks to the no-code license. THEY will
be the ones that finally bring ham radio into the digital age, not the
old time CW ops, still passing traffic (and wind) the old fashioned way.
In the time it takes them to copy one piece of traffic, a modern digital
network can send a hundred times that amount across the entire globe and
back.

Is there any sats , preferably geostationary, transmitting anything
(data/beacons etc)
at 1.2-1.3GHz? It would prove useful testing equipment such as low-noise
amps and feedhorns etc.
Please email me if you know of any...

Regards, Anders G.

Uhhhhh, I think no-Code amateur radio in the USA was instituted by
the Reagan/Bush administrations.

There is no amateur satellites transmitting, since the 1260-1270 MHz band is only for uplink.

The GPS L2 is at 1227.6 MHz and the Glanoss L2 frequencies are at various center frequencies at 1246 Mhz + 437.5 kHz x n (n=1..24). Due to the 10 Mhz spread spectrum modulation used, these signals are very hard to detect.

Higher up in the band there are (or at least has been) some low orbit remote sensing satellites. Do a web search for L-band and for remote sensing. This should return some pointers to these satellites.

Very good comments Tom... I think there will be a large shift of hams to other bands...not the new inrush others think will happen. A lazy no-coder will still be where he is now...on the out side looking in. If I were a commercial interest wanting uhf-vhf freq allocations that are currently assigned to hams...I would directly and indirectly support the restructuring. The big push will be hams switching to working HF instead of the high bands that are under attack from outside forces. The end result will be fewer hams on the bands needing protecting...and the manufactures selling more gear. Its funny all the people who were sold down the river for money are the ones smiling as they float down stream.

I'll live and get over it.

I think you're right TIM in the aspect of people doing the sudden
upgrade,
but to refer to all the techs as "lazy no-coder"s speaks volumes of
your personality.

I've said this before, and I'll say it again. HAMs brought all these
changes on themselves. Some people tried to warn about it, but
the problem was it wasn't an illness, it was a suicide, brougt on by
selfish elitism attitudes like this.

And you're just going to continue the downward spiral common to those
that fail to face reality, not even realizing that HAM radio is what you
make it for yourself, not want some self inflated bozo thinks is
important for everybody because it's important for him.

HAM radio will survive this change, but not by actions like this. It
will survive because there will be people out there who aren't so
insecure in their own abilities that that have to berate anything
different from their frame of reference. HAMs that will be the
elmers of tomorrow.

You know what you REALLY remind me of? CBers who declare
"THIS IS MY CHANNEL!!" Hope that label fits you, cause you
wear it well.

Mike

Gee Mike can you write a paragraph without an insult..?? If I wanted to insult you I would email you direct. The restructuring affects me very little. Funny thing here is I agree with you that hams brought this on themselves. Although I don't believe I do...if I had an selfish elitism attitude, or if I was a self inflated bozo, or self inflated bozo, I have the right as a free born American to be just that. But as I said before, I agree that hams brought this all on themselves..and I really don't give a hoot one way or the other. My operation is mostly cw and digital. All the upgraded hams won't bother me a bit. But one thing I will add is that I do feel sorry for the new upgraded ham in one sense. I'm sorry they will never experience the same ham radio I had the privilege of being a part of for 20 plus years. If you listen to the talk on 75m or 20m you hear many groups of hams that will not welcome the newly upgraded hams. Most of these groups have been on the same freq for decades..and they will resist any thing they consider an intrusion. By human nature..when these new people are shunned on the band they will resent it and lash out one way or the other. Some will be good operators and just find each other on another freq. Others will start a QRM war that will never come under control. Its not something that anyone wants...I just don't see how it can be avoided. If you think the code/nocode debate was bad...or the 3.950/14.313 barf/stumpjumpers/liberty net fighting was bad. It will look like childs play when this all comes to full bore. It makes me wonder if all this was meant to allow ham radio to finally cut its own throat.

If I insulted you personally with my lazy no-code statement Mike..I'm sorry. I'm not looking for enemies..I suggest you don't also. But what the hell ..at least we both sign our names to what we type...hi

ALQUEVA DAM
With The maximum height of 96 meters, it will create a lagoon with an area
of 250Km2, of which 35Km2 are situated in Spain. It will have a total
capacity of 4150 hm3, of which 3150hm3 are utilized.
HIDROELECTRICAL CENTRAL
Equipped with 2 turbine/pumps with 120 MVA each, capable of producing around
350 giga/watts a year, double the necessary to supply both ?vora and Beja
districts.
The other infrastructures are : Pedrog?o Dam, Primary irrigation system.
The 18 e 19 of March operation, will be organized by A.R.V.M. in
collaboration with Agr.61 of Santa Maria dos Olivais and the objective is,
to give one last opportunity for the radio amateurs all over the world, to
contact this village that will soon be completely submerged by the waters of
the Alqueva Dam.
We will be on the air for 48 hours.
So that we can remember Aldeia da Luz in a different way, we are determined
to organize this activity so that it will be a milestone within the national
radio amateurs
Looking forward to the 18 & 19 of March.

Is anyone interested in discussing the half-duplex service provided by American Mobile?
Unlimited usage for a flat fee. It could be used to help further your hobby by providing reliable communications within an invitation only format (no uninvited users).
This technology follows a standard trunking format with their GEO bird acting as the repeater platform. It has line of sight beam coverage throughout North and Central America. 10,000 subscribers per talkgroup, 256 sub groups, private "one-on-one" between any two subscribers. Current Westinghouse terminals will support one master group, one private call group and 14 sub group selections.
Positive transmitter identification, emergency override plus many more features.
This technology can be used for emergency management, storm chasers, law enforcement. . . .even hobby communications.

What do all of you think about this concept?

There is a very fine line between "hobby" and "mental illness." - Dave Barry

Sounds like some people are doing some useless babble!
The restructuring doesnt make it easier for people to become hams!!!
You still have to pass your no-code exam and then pass 5wpm to
upgrade!! Whats the big deal??? Clinton administration didnt do
anything for me except give me a JOB and the ability to further my
education!! When has a republican did that for you? I can agree that
ALL POLITICIANS SUCK!!!!, but think before you speak!!

I hear all stating that tax cuts for the rich cause more circulation
of us funds... Yes it does, Right into another rich persons hands...
Therefore nothing is gained!!! 0=0

Who do you think forced SDMV to cut there reg fee's? Wasn't a
republican!!!

Start Giving to the people that make the world and not to those who
rule the world!!

167. patch to make SatTrack work in 2000

Newsgroup: rec.radio.amateur.space
Date: 2000-01-12 00:00:00 UTC
From: nomail@rob.knoware.nl
Message-ID: <slrn87ps7d.j7b.nomail@linux.pe1chl.ampr.org>
Source record: 10504

```
Well, I'll post this again under a more meaningful title so that
it is easier to locate for people searching with DejaNews etc.

The patch below makes SatTrack 3.1.6 (as found on many sites carrying
FreeBSD mirrors) work after Jan 1, 2000. Most of this program seems
to be designed with Y2K in mind, but a single issue was missed. The
patch below is one of the ways to fix it.

Rob

diff -cr SatTrack-3.1.6/src/sattrack/sattime.c SatTrack/src/sattrack/sattime.c
*** SatTrack-3.1.6/src/sattrack/sattime.c Sat Jan 4 22:19:08 1997

No V1.5 patch yet, but there is an independent program that reforms the
kep data so that i-track will recognize it ok. I've tried it and it
works fine. Unfortunately, can't remember the web site I found it at.
Maybe someone else here has it.

I would love to hear a CB'er who really knew how to use the 10-codes.
The code 10-20 means "What's your location?" Can't tell how many
times I've heard "What's your twenty?" It's like saying "What's your
what's your location?"

Totally irrelevant.....a ham radio license is of no commercial use.
This is *Amateur* radio, not commercial/professional/broadcast/PCS
whatever.

The license is NOT a graduation certificate, but rather an entrance
permit to the hobby/service. What one chooses to learn after that is up
to them.

Ever ordered Shrimp Scampi or said "Shrimp Scampi"?
Then you've said shrimp shrimp. "scampi" is "shrimp"
in Italian.

THANK YOU

I can deal with a diff no problem, I for one predate rpms and debs
and all of the newfangled package managers. I wish all
of the purveyors of linux would stop reinventing the wheel,
but I do understand their motivation.

And like the "new breed" of hams on our local repeaters and 10M SSB
who say "seventy-threes" which means "best regardses" or "seventy
thirds" which means 23 1/3 (last time I poked it into the calculator,
anyway)

things that make you go hmmmm.......
Joe

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

>
> You didn't take away anything, but the FCC sure did!

No, they didn't. You earned whatever class license you
hold, and can lay claim to the set of skills you had to demonstrate to the FCC or VE when you were tested, regardless of what the FCC does now. That can never change. For that
matter, a ham license is not intended to be proof of some static set of skills that will forever remain the same. It's a permit to get on the air with specific privileges. The *only* way the FCC can change the value of your license is if they add or delete subbands from your current privileges. You're free to confuse

the effort you put into getting the license with the operating
privileges it grants you, but that's a classic case of mistaking
the map for the territory. So now it's easier for newcomers
to get your class of license, but that doesn't change what you
accomplished to get there.

And if it is so damn important to you
that people on the air know you're an "Original Extra" or whatever, to set you apart from the folks who only had to do 5WPM, fine. You'll sound like an elitist, but go ahead if it
will make you feel better. People will know what you mean
if you say you're an "old extra" or "original extra".

>
> It's typical for those who dislike working for something and who

>

You can be proud of your accomplishments and also
accept without bitterness that the world has changed.
5 WPM does take work and study, and is surely not a "handout".
I know several people in their 20's and 30's struggling
to achieve their 5WPM, who would be very insulted by
your characterization of this as a "handout". Yes, it's easier,
perhaps much easier, but it's a lot more work than most lazy
people would ever put forth. 5 WPM will do a fine job of
keeping people looking for handouts off ham radio.

A lot of times I hear this "handout" crap, and I see a
survivor of a hazing ritual, known as "high speed code", resentful and angry
that others will have an easier time than you had. Hopefully this is not your
real motivation for being
so upset at the changes.

>

I am suggesting that morse code is another language in itself, and
learning a language is harder than improving the language skills!
The post was to explain that The restructuring
isn't changing the difficulty level of passing 5wpm.
In other words, Passing 5wpm is harder to pass than 13/20 wpm.
Therefore I must ask you, Did that answer your question or was I not
reading your question right?

> Totally irrelevant.....a ham radio license is of no commercial use.

It's a certainty that it will never again be, but it has
not always been so. As a high school kid I got a job after
hours repairing radios and TVs *ONLY* because I was a ham. I
got into military electronics, and graduated near the top of
my electronics school class, because I was a ham. Later I
got a GOOD technical job in radio - because I was a ham and
had used that fact to build my resume.

> This is *Amateur* radio, not commercial/professional/broadcast/PCS
> whatever.

Yep. Only a mere shell of its former self.

> The license is NOT a graduation certificate, but rather an entrance
> permit to the hobby/service.

You jokers have regurgitated that tired old bromide until
even the kids at the FCC believe it, now. But Hey, what do
they know, they just work there, right?

If you prefer to view your EXTRA class license as an
"entrance permit" to the hobby, it tells me that you got it
for free. Most of us did not, and DO NOT. The FCC, at least
30 years ago, considered an EXTRA class licensee to be the
only expert class of ham. The fact that he was knowledgeable
enough to score a passing grade on their tests was proof
enough.

Congratulations on changing their minds. Henceforth there
will never be anything other than "entry level" class hams
licensed. And that's exactly where most of them will stay.

I'll tell you one thing, I have NO interest to communicate on
20M or 75M. Those Freqs are for CBExtras who act like they are still
on CH 14. I plan to go only as low as 10M for my HF pleasures. I'll be
on that band until the sunspot cycle dies down. Maybe by that time the
ISS will be occupied and I'll be getting back into space
communications.
For me Space is the ultimate in DX and The World Is Not Enough.

Well, there's some duplication with RPM versus DEB, but either is better
than no package manager at all. Compiling from source is OK for some
things but to maintain your entire system from source is a big job
today if you want to keep things up to date.

(As to RPM versus DEB.. deb is technically superior, but RPM is
more popular for now. They may get merged at some point in the future.)

Well, I understand your point, but you may not have tried this yourself.
There is a definite 10wpm 'Wall', I am there now. This is caused when you
are trying to condition yourself to use the 'sound' of a character to
recognize it vs. interpreting a collection of dots and dashes. As the mind
fluctuates between modes, you hesitate and start missing characters.

I am earnestly trying for my 13 or 20 wpm, but still think Morse code has
zero to do with radio.

Please stop crossposting this to the sat group.

Thanks

It is NOT irrelevant. At least it wasn't a few years back. I know from
personal experience. I was hired at a job once over another candidate,
because in addition to my other qualifications, I had a ham license. I
was told by the hiring manager at the time, that having a ham license
means that you actually "live" this stuff, and don't just look at it as
a 9 to 5 job, which they thought, meant a better employee. This was back
in the days when hams still built alot of their own projects, and the

title of "ham radio operator" was synonomous with "electronic tinkerer" or "freelance engineer".

While a ham license is not a true accreditation, it tells something about the person's goals, and interests and gives the hiring manager some clues as to whether or not the person would make a good technical employee. Of course if you are in a field other than electronics, then it's probably meaningless.

Today, with the preponderance of appliance operators, who really don't know much REAL theory, I would tend to agree that the license no longer stands for much.

The Technician is by definition, an entrance level exam, and has been for 10 years. The General and Extra are more than entrance obviously, since they require more knowledge to pass. However, they are entry levels to their enhanced privileges. In no sense are they graduation certificates, or proof that someone has achieved something great in technology development. Amateur radio never was meant to be a college degree. The only applicability of an amateur radio license to the commercial world that I know of is that an Extra will get you a *Third* class NARTE Technician certificate.

Maybe now you'll have to:

a) conduct interviews,
b) hire college graduates (from a relative field), and/or
c) hire experienced broadcast engineers

I don't understand why you post this comment. Diffs have been
traditionally used to distribute small fixes to source code, and
package managers are a very good solution to an entirely different
problem: installing several programs on a computer and keeping track
of files and the programs they belong to. I don't see how these
are related, and I happily use RPM to keep track of the packages
on my system. This morning I updated the whole thing from SuSE 6.2
to 6.3 with very little effort and trouble, especially when compared
to the early days of Linux.

The problem is that the systems that use RPM are superior with regards
to user-friendlyness of installation and maintenance. Debian may be
technically superior (in the eyes of its developers), but I would not
want to use it as long as the installation process is as I last saw it.
Apparently that is true for the majority of the Linux users...

> had used that fact to build my resume.

The ham license has never been proof of electronics skill or knowledge, Dick. When you got the jobs you describe above, did you do so without any further training? In other words, did the radio/tv repair shop hire you without giving you any training after you were hired? Did the military hire you without any further training?

If they had to train you, then you cannot now claim that passing the ham license exam was evidence of electrical skill since those organizations did not take that license as proof of electrical skill. For those organizations, that license was only proof that you had some basic understanding of basic electronics and therefore would be easier to train than another person.

And the ham license of today still serves that purpose. However, it plays less of a role in the hiring process today simply because radio plays less of a role in an electronics career today. Years ago, because of the greater role radio played in an electronics career, many more organizations were willing to give credit for any radio training (no matter how basic). Since radio plays less of a role today, fewer organizations give that credit (even those who did years ago).

I also think you're being a little disingenuous here, Dick. After working at a radio/tv repair shop, graduating near the top of your electronics school class, and working in electronics in the military, I really doubt that the ham license really played that much of a role in your later employment at that "good technical job."

The simple fact, whether you want to admit it or not, is that the ham license exam has always been an extrance exam into the world of hobby radio (hobby radio, not professional or commercial radio). That is the way the FCC designed it many years ago, and that is also why there have always been other, much more difficult, license exams for professional or commercial radio personnel.

With that in mind, the existing license exam system serves its purpose well.

I understand it real well, In fact it's an 8wpm barrier but you may
have got stuck at 10wpm. Morse code does in fact have something to do
with radio, We dont send it over the phone do we? But I do agree with
most of the post in here that morse at present does not make ham radio
what it is today. Maybe 30 or more years ago, but not today. Good luck
getting passed the barrier and I hope I dont have that problem when I
get there which I know I will! :(

Well, I'll tell ya what...

Why don't you try interviewing at HP and tell them that your qualifications
include being able to design a Hartley oscillator from memory and that you
can send and receive 20WPM code proficiently. See how far you go...

I don't think the question pools are available for purchase.
On the other hand, our volunteer examiners probably have a bit of a
collection from all the exams they've run in the past.

I haven't heard of corruption in the VE process here, and we don't
have the medical exemption for Morse either.

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH

Not any more! All that's required is the determination to
make the necessary memorizations, and to stay with the
program until it's done. At which time no one will be able
to determine, without some sort of additional testing,
whether the newly licensed Extra has learned anything at
all! Now, the only differentiation among the amateur license
classes is merely "Did you memorize 35, 70 or 120 question
and answer pairs?" Neat!

> However, they are entry
> levels to their enhanced privileges. In no sense are they graduation

You don't say. I guess that's why all the newcomers come to
the old Extra with all their questions and problems- or once
did. Evidently they hadn't learned that he was just a
beginner, too. What drivel.

> Amateur radio never was meant to be a college
> degree.

For most radio technical people over the term of its
history, a college degree just wasn't in the scheme. Nor did
it need to be. Yeah, we know those of you who came along
later would like to change that. And as far as ham radio is
concerned, you got it done.

> The only applicability of an amateur radio license to the

Well, Hoop de do! That just shows how much disdain you
"engineers" have for any non-engineer. We just don't count.
Fine, I sure don't need your "Narte" nasty and wouldn't have
it. I had a First Phone that the FCC junked, the same way
they just did to the Extra class ham license. Whatever

little technical prestige Extra had remaining, and after 15 years of Question Pools there sure wasn't much, is now gone to the same junkpile. RIP. It was once upon a time a Very Good Thing. Now it's nothing.

Well, well! And today, that can't be assumed, without
further testing. Once a ham radio license conveyed some
minimum level of knowledge and skill, in most cases. Today,
no employer who knows what has happened over the past couple
decades would consider awarding that 'credit' without other
independent confirmation.

> And the ham license of today still serves that purpose.

I'm afraid not. Today's ham license proves only that
licensee was only at least minimally interested in radio,
enough that he completed the licensing process. The FLAWED
licensing process.

However, it
> plays less of a role in the hiring process today simply because radio
> plays less of a role in an electronics career today.

There are fewer two-way radios in use today? What rock you
been hiding under? And there aren't a mass of wireless
services that have sprung up overnight? These are not
"radio"?

Years ago, because
> of the greater role radio played in an electronics career, many more
> organizations were willing to give credit for any radio training (no
> matter how basic). Since radio plays less of a role today, fewer
> organizations give that credit (even those who did years ago).

Your conclusion is true but you erred in your reasoning.
Radio is more widespread than ever, in every area of life.
Even the dreaded HF telephone wireless modems are radio.

> I also think you're being a little disingenuous here, Dick. After
> working at a radio/tv repair shop, graduating near the top of your

You'd be wrong. And to top it off, they even gave me a
Morse code exam!
The organization had discontinued the use of Morse not long
before, but still retained it as a backup to wireline
teletype. ALL the officials who were involved in the hiring
process were longtime hams themselves, and knew all about
what a ham ticket meant *then*.

> The simple fact, whether you want to admit it or not, is that the ham

> or commercial radio personnel.

That is neither a simple nor a complicated fact, in fact it
is no fact at all. Just as Novice was the preferred entry
point into ham radio, a ham license was once the preferred
entry point into commercial radio and electronics. The
commercial exams came later (been there too). THAT is what
has changed.

> With that in mind, the existing license exam system serves its > purpose well.

Sure does. It sets the ARS up for making our frequencies
available for reallocation to commercials, since such a
trivialized "service", now easily equated with other trivial
services such as the Citizens Band service, is much less
valuable in its own right. Only ours has VAST SPECTRUM
available for the taking. FCC has just completed the setup
by doing exactly the oppositee of what they said - they have
made the Amateur Radio Service a **NON-technical** entity,
and you have just helped to confirm it all.

I'd imagine the Question Pool Committee will further
confirm it after April 15.

No, but if you've made the effort to learn and understand the theory (and not
to memorise the questions) it's something you can be proud of perhaps.
In VK when you get your license you get both the station license
and a certificate of proficiency. The unrestricted license is the
"Amateur Operator's Certificate of Proficiency" for example. This is
actually quite a nice certificate, with the seal of the ACA etc.

Hi, People!

I'd like to very respectfully and with no malice aforethought <bwg> request that there be some "tailoring" of cross-postings.

I'm over on "rec.radio.shortwave" and there is all sorts of "ham" stuff being cross-posted to it that have nothing to do with SWLing but only with hams.

I think y'all are great and I owe my interest in SWLing to hams but if I wanted to be "in" on ham stuff, I'd subscribe to ham newsgroups.

When I got on the Internet in 1989, this wasn't a big deal as the ng's were so small but - in 2000 - this x-posting really bogs everything down.

As I said: no flame, just a respectful request.

Many thanks,

Gray

Perhaps. Which version did you try? I think the 2.1 installation is
pretty painless.

Debian has a lot of support among the free software community.
It comes with a lot of ham radio software and there are quite a number
of hams 'on staff' as developers.

Dick,

I think you're downplaying your own abilities and attaching too
much importance to the license. Sure, the license, especially in
the past, was a 'flag' indicator of certain abilities, but that hasn't
been true for years. I think the status of a HAM license as a
flag of technical competance went out the window in the 60's,
when consumer technology moved away from 'hand wired chassis'
and tube technology. Not that HAMs changed any at that time,
but the public perception of 'high tech'. And over the years it's
further changed.

Mike

I did, with this result:

Radio Operator/Communications Analyst in Quantico, Virginia
USA

Key Role
Provide Morse code and radio operator support for key
government clients.

Qualifications
HS diploma
3-5 years of experience
Experience with voice, FSK, and packet communications
Experience with Morse code at a proficiency of 18-20
groups per minute or Extra Class FCC ARL
Experience with radio theory, Q signs, and radio
equipment

E-mail your resume directly to Mike.

I'd bet they have trouble finding a young ham to take this
job.

There is a world of difference between 5 wpm and 13/20 wpm.

At 5 wpm you can still get away with thinking about each letter after it
is transmitted. By 13, and quite definitely by 20, you had better be well
integrated with the code, recognizing the "sound" of patterns, or you will
fail quite miserably.

Such CBers exist. You also hear hams say "What's your QTH?" - which
means "What's your what is your QTH." Just as bad, poor usage abounds
in both radio services.

Part 97 doesn't specifically address suffixes except
in question of "instant" upgrades where valid CSCE
holders can use specific suffixes to indicate that
they hold examination credit to use certain band/sub-
bands not encompassed by the current FCC-issued license
they hold. I wouldn't encourage such practice, to me
it would be simply a sour grapes response to the FCC's
elimination of the higher speed code elements.
The elimination of higher speed code elements is a
DONE deal, no "sour grapes" response within the
amateur community be it form of amateurs attemping
to identify themseleves on the air as "real" hams
because they passed a 13 or 20 WPM code element or
those that advocate VE's boycott participation in
the licensing process after April 15th is going to
make the FCC reconsider their action and restore
higher code speed elements as part of the licensing
requirement.

Hi Bruce
I am experiencing problems with my Winorbit too.
When I load Keps dated after December 24 1999
I get checksum errors for every satellite in the database.

The WinOrbit bug list dated 1997 says "* Many "checksum errors" when program
starts, after updating database, or saving settings: Check "Number Format"
in
International Control Panel - the "1000 separator" and "decimal
separator" must be different!
I tried this but everything looked ok i.e. , & .

I guess someone will figure it out eventually.
I have noticed that clicking on the" keep" button when the
validity of the data is questioned seems to get past the problem
for now, and the data for SO 35 still works despite the errors

No, but when the ARRL decides that it's Hiram Maxim's birthday,
we can all go around signing "stroke 200"? Who the hell is the
ARRL to decide stuff like that? If they can decide, or if they
can ask the FCC for permission to identify this way, why can't
we (the 20+ WPM, 1-percenters, Extra Class pre-April 15th) request
the same?

Joe K7JOE "stroke 20"

>Perhaps. Which version did you try? I think the 2.1 installation is
>pretty painless.

I don't remember the version number. It dumped me into a program with
extremely counter-intuitive keymappings at installation time (probably
reasonable only to those who are accustomed to emacs), and when the painful
process of selecting packages was finished, it installed them one by one,
asking configuration questions all the time. So you could not leave it
alone.
When I decided that I needed more packages, it repeated the whole process
for all the packages already installed, deciding and reporting every time
that it had nothing to do. But still spending lots of time at it.

It was even slower than installing Windows and Windows programs...

I had no time to spend hours on getting a system installed and configured,
and RedHat did the same thing in 20 minutes, so... after a few hours
of fighting with this and remembering the remarks about a more
user-friendly installer that would be written sometime in the future but
was not high on the priority list, I decided to leave it at that.

Maybe in the meantime it has been written, and now it again can compete
with RedHat, SuSE etc.

>Debian has a lot of support among the free software community.
>It comes with a lot of ham radio software and there are quite a number
>of hams 'on staff' as developers.

In the environment where I use Linux, it is more important that there
is a real company with support services and guaranteed regular releases
behind it, than a certain religion about including/not including things
that are free/not free. And the installation and configuration has to
be done by people who are not old-time Unix hackers as well. I respect
those religious people but frankly it is not a priority to me (in fact I
would prefer when there would be a shakeout in Linux distributions and
a concentration on a standard, as that is required to get applications
available for everyone).
So we have used RedHat and now we are using SuSE (a German distribution).

It has hamradio stuff as well, but also commercial applications. I also use it at home.

you could sign it 'stroke-off' for all anyone really cares.

Yes, that's a known problem. The package selection program 'dselect'
takes some getting used to, and the keystrokes aren't too intuitive.
(I can't stand emacs either.) There's a lot of work in progress now
to make the installation process ask fewer questions if you want it to.

The 2.1 installation has a bunch of profiles you can select to say
what you want to do with the machine; like development, or just using it,
or kernel hacker or whatever. Therefore you can avoid dselect for a bit
longer.

> When I decided that I needed more packages, it repeated the whole process
> for all the packages already installed, deciding and reporting every time
> that it had nothing to do. But still spending lots of time at it.

Yep. That's been fixed. (There are alternative methods for dselect
which don't do it -- and a particularly smart one called "apt" which
can grab stuff directly from the web too.)

Actually, Radio Shack didn't create the FRS, they revived something
that has existed since 1947. In the old days, the FRS was called
"Class A Citizen's Band". It had kind of gone into a state of non-use
because darn near no one knew it even existed. Have to give Tandy and,
to a lesser extent, Motorola, for reviving it.

How about neither -- Ham Radio was in trouble until they started lifting the code requirements.

And be careful who you insult (referring to the "no code CB whiners") - after all, they could be at the other end of the conversation on HF, code or not and get you call sign, remember who you are, and conveniently forget to send the QSL...

After all, with talk like that, people might think you have a bad attitude!

Times change; better get used to it. An influx of new HF-qualified
hams might be all that saves your bands. Besides, someone new to talk
to about your ailments!

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Hi Bill,

I've run an FT847 with an ATAS-100 and a Diamond dual band antenna at 110' for the last two months. I can _hear_ AO10, UO16, LO19, FO20 and AO27 with external pre-amps (SSB SP-2000 & SP-7000). I've yet to work anything, though.

I use Nova for windows to check when the Sats will appear.

I think my lack of actually working any of them is mostly due to 150' of RG213 coax loss amongst other things. I have eggbeaters, crossed yagis, an az-el rotator and low-loss coax sitting in the shack ready to go, but as an apartment dweller I'm battling with the neighbours right now.

Try www.amsat.org for individual satellite freqs (program up those memories!) and there's a great forum for the FT847 at http://www.en.com/users/rayd/ft-847.

Good luck, Howard G6LVB

Howard,
Thanks very much for the tips.
I'm really looking forward to this ...
... I just love the 847 and can't wait to really learn all it can do.
I just hope my triband vert at 20 feet (too low, huh) can do something.
73,
Bill

While I agree with most of your post, and use GMT/UTC for my home and laptop
PCs, and can convert local EST/EDT to UTC and keep all may radio logs in
UTC, I resent being comparaed to NASA in any way.
Any outfit that can not get organized enough to tell the difference
between\metric and "good old English" measurements should be run out
of town on a rail.
Or at the least be burried in sand up over their heads just before the tide
comes in.
If I pulled a stunt half this stupid I would be looking for new work
in the morning.
In Japan I suspect the entire design/managment team would step in front of
a train. And that would be a good thing.
I worry for the future of "technology" if the one of the largest
aerospace companies and the major government agency can not communicate
their respective measurement standards.
So please do not compare any of us with NASA/Martin whatever.
My 5th grade nephew still has trouble accepting how any adults can mix up
such different standards. HE says "But they are engineers and have computers
and telephones. How could this have happened?" I told him that even "smart"
adults could and will do some very stupid things.

I can Fart code at 5 WPM. Anyone who can't pass five wpm isn't trying to pass. You losers got your free government handout radio license and now you complain ham radio isn't Dumbed down enough for you. I guess you all want to get licensed as easy as you get your welfare checks. Why don't you whiners get together with your CB buddy's and suck up to the ARRL. Maybe they can fix things for you.

Extra class, killed in action.

OOPS, my apologies to KF6FOZ. I misread the tag and 'flamed' him for the "Mr. Cold Shower" comment about farting 5 wpm.

For all we know... the anonymous "Cold Shower" might not even hold a license.

Hey folks....don't forget that there are Conservative Democrats
out there as well. I hate to disappoint you guys but Republicans
DON'T have a monopoly on conservative ideals in America.
....It's just that the Republicans want you to think they do.

Get a clue.

When is this CRAP going to stop??? The new test requirements are
not welfare, you still have to study to pass the tests. Remember
welfare is a hand out. For Amateur Radio license to be a hand out it
would mean no testing at all and no charge for the license.

The Code War is over so stop fighting it! If you think the FCC is
going to rase the code speeds up again forget it, it's not going to
happen. The return of the 13 and 20wpm requirement has a snowball's
chance in Hell of coming back.

You better re-read the message! Extra Class was said by Mr Cold Shower!! Anything else Mr. Im better because I am Dennis B. Walton-Tech+? You are supporting the Arguement that other coded hams are denying.

I am a no-code technician not by choice. It may have taken me a while to go for my code due to owning my own business, but at least I am still going to do my upgrade. So keep your browser open and check QRZ from time to time. Until then I work my ass off trying to improve my life instead of furthering my hobby and when I got the time from work, I'll do my code.

If the theory test wasn't such a handout we might be able to take pride in holding a ham radio license.

Well, I agree, 5WPM isn't a real test. You can basically just memorize
the characters and do a 'mental lookup' and pass the 5WPM.

But that's not the point. The point is CW should go, period. It's
outlived
it's prime. If you like it, use it, but don't force it on everybody.
ESPECIALLY
not as a fake qualifier of technical superiority for the 'so called
Extra' class.

Rick, they are just unhappy that the federal subsidy program for
Morse code has been decreased. They might now have to get off
their lazy butts and expend some energy promoting their favorite
mode.

Gee little Porta Johnny waa waa Thought I was kill filed dickweed.
Maybe you should name yourself. Any person who slanders fellow club
members ina public forum needs to be on a list like this. This is a
truth that I read from your posting, I wrote to several of your club
members that I personally know to advise them that you basically are a
lower form of plant life. I provided copies of your post to them as
proof

Therefore, I did read the truth (as you wrote it) I did write the
truth (unless you lied about the whole thing) I did think that the
truth should be spread amoungst that you insulted and I am telling the
truth now. I did all those truths and would do it again, because I
know it pisses you off.

Maybe you wanna send popgun shooter 1 at me again. Yes Johnny rides
the cotton pony, we all know you have a dejanews address and post
messages back and forth to yourself. Best you stay near that big bad
radio station you set up. Never will know when Ares will need you to
rescue someone caught in the ice flows of the Niagara.

Tata prattle brained fool. Go back to teaching your pet poodle morse
code. I'm sure it would be a better operator than the likes of you

Don't forget to killfile me again

Well, actually, it is: Can someone recognize the individual letters - yes or
no?

I agree that for "Conversational 'CW'," the 13 wpm test is THE test (and 20wpm
tested proficiency only).

Not a chance. If codehaters can't understand why they
should learn it from all that has gone before here on RRAP,
attempting to "promote" it to them would be an enormous
exercise in futility, to say nothing of overfilled with
rancor.
Oh BTW....Why haven't we heard from you, the character who
wants everyone with a ham license to be an engineer, on the
memorize-the-question-and-its-answer writtens? You ARE all
smoke and BS, aren't you?

You're not quoting me correctly.

Yes, I said it, but WITH it I ALSO said:

If you like it, use it, but don't force it on everybody.
ESPECIALLY not as a fake qualifier of technical
superiority for the 'so called Extra' class.

No one said you couldn't use it. Just don't make a PHYSICAL skill
a measure of technical competance. It's not, and never will be.
If you think it is, well, I have some cheap land in Florida to sell...

You *have* heard from me, Dick, over and over, and from Bill
and Ed, too. The ham exams in 50s and 60s were no more difficult
than they are today. In a lot of ways, they were less difficult
than the exams are today. The ARS had already been dumbed down
when you took your first ham exam.

Pay him no mind, Gary. The only time he took an exam at the
FCC office (advanced) he says he was drunk. He still doesn't
know anything about it.

With all due respect, why do you guys continuously crosspost this diatribe the Satellite newsgroup? Speaking for myself, I cannot see where anybody here cares about the CW/H.F. privileges, it is a non issue.

You guys are so wrapped up in disputing the now commercially worthless H.F. segments that you have lost focus on what the commercial sector really wants and is lobbying for, two meters and UP for satellite work.

I cannot help but wonder if the FCC and the lobbyist have struck a deal and this restructuring is a way to wean us off of the upper bands.

Free your mind.......

As usual, wrong again, Dick. My parents drove me 200 miles
round trip in a '46 Chevvy to the Houston FCC office in
1951. The only alcohol I had was Hadecol (sp?), 30 proof :-)
I often wondered why that stuff made me feel so warm and
fuzzy.

Nice post Mike! Good Luck!

Being an Amateur for over 10-years, and having attained my license
before the advent of no-code, and still enjoying all aspects of
CB radio, I"M ON YOUR SIDE!

Keep working hard and ask yourself WHY amateurs who HATE CB come
here. They are not superior operators because of the license
they hold. They are inferior humans by trying to talk down to the
next guy based on their inadaquacies.

It sounds an awful lot like my dad, with the "I had to walk three miles
to
school everyday, even in bad weather. And if our shoes had holes in
them, our feet got wet!" But I guess my dad was pretty well off. I've
heard from others their dads would claim they were barefoot in the
winter.

Now Now John, It's not 250 miles, more around,
110 to 145, depending on local in your neighborhood.
You should know me better by now, driving for me is
a pleasure, not a task for most people.
Porky Huh, sounds like a great reason to go up
there and try my new recipe for pork rinds.

As far as the set up, I said before, more powerful
than when you left town.

Channel 1, I WON, No ifs, ands, or BUTTS about it.
I'm working on 17 now, but the good things about
that channel, there's always some trucker coming
through town to pick on.

The reason the average age of an Amateur Radio operator has risen as high as it has is because of the attitude of the Amateur Radio operators. Granted, not all share this attitude, but those that don't are the exception, rather than the rule. I for one have been trying to understand this attitude, but have failed. If there are any hams out there who would like to enlighten me, I will be more than happy to further my education. Thanks in advance, Bill.

I don't hate CBers. I was a license CBer in the early 70's. I got my
first ham ticket in 1961 and general class in 62. I currently have an
extra clas ham ticket.
What I don't like about CBers is that fact that they think that they
are above the law. Death threats, profanity, and hate talk dominate
the CB channels. A person running legal power is a rare thing on the
CB bands where I live. If my children were little, I would not
hesitate letting them work the ham bands unsupervised.
But,like the Internet, I would not consider letting my children
work the cB channels unsupervised. That is why hams don't want
the CB set comming up to the ham bands.
Just a thought

That was almost 4 yrs ago. But you are welcome to make the 250 mile
trip to drink a few. Just make sure it is on my day off!!!

Is channel 1 still dead as hell down there? Last time I was there
about 6 months ago, There wasnt a soul around except on 17.

Uh oh! Someone up Named Porky says, Tell him to come up here so I can
squish him... Heh! Sound like a threat?
I think you could squish him with the setup you had that I remember.
Dont know about now though.

Yeah know, I been waiting for a long time for someone to squish this guy. He thinks his Ford Dually and a 4 pill box is the best out here.

He used to live in Palo Alto, but he is a white guy that reminds me of someone that should have a Galaxy Saturn strapped on to his John Deere tractor.

Steve Michaelson was in this area a couple years ago and got a whole shitty thing stirred up up here. But fortunately that loser was only passing through.

Heh. Even your good buddy "Noggie" was up here for a while tripping off of all these shit starters up here.

I have a load of a time laughing at all the crap up here!

Be advised, It is a long trip up here. If you do decide to come up this way, Bring Mikey with ya...

Cya Later!

I'm a field Tech. I eat in the truck on the way to the next site if I eat at all. I visit the office on Monday morning to see my e-mail and file my travel vouchers.

> Come up with some other excuse, iow.. ;)

Why are you liberals always trying to decide what someone else should do with THEIR time and THEIR life? I've got enough problems without you inventing more for me.

Now here are my demands of you.

1. Join the Republican Party. Actively support your local Republican candidates.

2. Get up half an hour early and telephone friends, neighbors, and talk shows and tell them about how the Republicans want to get government out of their pockets, homes, and lives.

3. Spend 30 minutes of your your lunch hour handing out Republican Party brochures and encouraging people to register and vote.

After you have done all three, you will be allowed to post on rra.policy using your real name and callsign.

Its not free now but you people sure as hell are working on it.. If I could pass the test anyone could..
I aint real good at code but I passed the thing without bitchin.. Its what I had to do.. I passed the written because Its what I do for a living but there are lots of guys that pass both.. Why? They thought ham radio was worth working for... My wife passed her test for no code tech and has been working on the code.. Now she said "their going to give the thing away.. all that work down the drain." I told her its not down the drain but there will just be fewer real hams and a lot of free loaders.. After a while even filling out an app. got to be too much trouble for the CBers.. pretty soon they will be getting rid of the written too.. Do you now what that will make us.. CBers.. IT IS RADIO WELFAIR.. You dont want to work for it.. Hey you have a right to have it.. I want it FREE! Well if we make it so easy what have we got.. NOTHING.. not a damn thing! Like America its going to Hell in a hand basket..
dumb it on down.. Packet is going and RTTY because they cant read.. Give them the paper..

>BRINGS up an interesting question - when WERE the exams "difficult" -
>only when *I* took them...?

In _The_Book_Of_Wireless_, Frederick Collins, 1915 we see that the code speed was just 5 wpm. (Of course, back then, code was the only mode in use -- you HAD to learn it AT SPEED or else you didn't communicate with anyone.)

Here are the other requirements:

Recognize the official KEEP OUT signal and distress call.

Be knowledgable of the International Radio-telegraphic Convention in force and Sections 3, 4, 5, and 7 of the Act of Congress of August 13, 1912.

Take a seven-question written exam covering:

1. How to make a diagram of the transmitting and receiving apparatus
2. How the transmitting apparatus is made and how it works
3. How the receiving apparatus is made and how it works
4. The International regulations for wireless communications and the U.S. wireless laws and regulations.

That written exam was an essay-type test. As the goverment examiners were fond of saying back then, "What you fail to say, you don't know."

This post is generally aimed at those who bitch too much....

Ham Radio was dumbed down (In your terms) before anyone out here got there ticket and now everyone wants to bitch... Only ones dumbing it down are those that complain and say it will be like CB or say that CB'ers are gonna invade the bands. Get real!!! You keep speaking garbage like that and it will eventually happen and you would have ruined ham radio for eveyone. Could you live with that?

The activity of the FCC restructure hasnt even hit the CB bands in my area yet. If it has, I dont hear it on mine...Only 2 other people I know on the CB band which are Hams as well know about it. A few other CB'ers I know that I talked to on the phone could care less about the ham bands. They like CB the way it is and dont even want to hear about ham radio. They still think The ARS Sucks.

Now, I am a no code Tech so you know. I, before the news, wasnt even interested in code. Now, I am practicing every day and night so I can get my 5 wpm and join those of you on the HF bands. If you dont want to talk to me there or on UHF/VHF, fine, so be it. Some one will talk to me or pound a paddle with me. You will not be missed one bit by me and alot of other users, Including Generals, Advanced, and Extra Class operators.

If you decide to have a temper tantrum like a child and want to sell your gear and leave ham radio for good, I got a few hundred bucks to blow on some used equipment.

We all know you won't sell it because of the news. You will put it away and then come back after a year or 2.

The real pity is, they could! Because it isn't THEIR ham radio any more. It has now evolved to something else other than what "they" had, so it can't be REAL ham radio! They don't care what happens now...

The great thing, that's fine and I hope we never, ever become as narrow sighted as them. Please, everyone who is a "young" ham, or even an "older" open-minded ham, please let's all remember these people when it's our turn to experience change! Let's remember this and conduct ourselves in a much more open minded way.

You don't have to think like me. You don't have to do anything for me. I just hope that as the future comes on for me and I have been a ham for a while, that I can be open-minded enough to accept change and certainly open-minded enough not to call people names and have opinions about them because they don't do something the way I did it. But, no, you don't have to do a thing for me...not at all. I consider you pretty narrow-sighted for your opinions, and I plan never to conduct myself like that, that's all.

Your posting and your time to think about these matters tells me you do care...

Hello,

I just subscribed to this NG today. I set my news reader to
download the 50 most recent articles. Result:

5 Genuine Space Comms articles. One of these is an FS: but at least it's on
topic.

45 Spurious crap articles, mostly about the code/nocode debate.

Please Please Please! STOP posting such messages to this group.

I'll unsubscribe and try again in a few months.

C$ 2 Million Order for IDC's SuperFlex Datacasting Equipment

International Datacasting Corporation (IDC) has received an order to supply approximately C$ 2 million worth of SuperFlex datacasting equipment to implement an Internet-via-satellite network that will serve China and other regions of Asia.

The SuperFlex network will deliver Internet content, at high speed via satellite, to more than one thousand Internet Service Providers (ISPs) located across the region. This is the first step in what is expected to be a large, multi-phase project for a client who wishes to remain anonymous for competitive reasons.

Ron Clifton, IDC's president & CEO, stated, "Internet-via-satellite networks make perfect sense in regions such as China. They provide quick infrastructure solutions for broadband distribution of Internet content over vast territories."

SuperFlex is a digital satellite networking system designed to distribute Internet services, multimedia data, streaming media, audio and video by satellite in point-to-multipoint applications. The system incorporates advanced technology using Digital Video Broadcasting (DVB), Internet Protocol (IP), SNMP, IGMP and MPEG international standards.

****

Comsat International Plans to Increase Internet and IP Services in 2000

Comsat International (CI), a business unit of Comsat Corporation, will continue to advance its business services with IP-based solutions in the year 2000.

CI will follow up on the successful inauguration of GlobalWay(SM), a fully interconnected IP-based regional network in Latin America in September 1999. GlobalWay(SM) allows major business centres throughout the Americas to communicate via direct connections, reducing expense, improving service and eliminating the need for some expensive equipment.

At the end of 1999, Universo On Line (UOL), Latin America's largest internet service provider (ISP), chose Comsat to provide essential information services including web hosting and web farming in Argentina and Mexico and Internet access services in Venezuela. In addition to providing Internet access in Latin America, UOL also has a Spanish Language Site, based in the United States, and serves the US Hispanic community. UOL provides more than four million pages of news, information, entertainment, e-commerce and services and averages more than two million visits daily. In these countries, the Comsat subsidiaries secured agreements to deliver Comsat web hosting and Internet access services to UOL. For each, Comsat developed country specific communications solutions and combined these with personalised customer support.

****

ESAT Teams with Devnet for Broadband Services

ESAT has anounced a strategic relationship with Devnet; the agreement will provide eSAT access to Devnet's world-class commercial office building customer base.

eSAT a broadband service provider and creator of satellite-based information delivery systems for businesses, governments, and educational institutions, has announced the intent to form a strategic alliance with Devnet LLC to provide broadband services to the tenants within Devnet's portfolio. Utilizing state-of-the-art telecommunications technology, Devnet serves building owners with complete management of their communications infrastructure by installing state-of-the-art networks with significant bandwidth, offering tenants cost-effective turnkey solutions. This strategic alliance will allow eSAT to market its services to Devnet customers as a primary or secondary single source vendor for high-speed connectivity, Internet access, as well as backup to landline infrastructure.

Customers will have access to eSAT's broadband solution for their applications needs, through the delivery of satellite broadband IP services and connectivity. Additionally, this will supply an effective business continuity measure to be used in the event of terrestrial failure.

eSAT's core products provide Internet access and networking services through its Global Satellite Internet (GSI) gateway and its recently introduced, Nexstream(TM) (bi-directional) solutions. eSAT's Nexstream(TM) provides organizations with an untethered, secure, transportable, cost-effective communications solution for facilities anywhere regardless of communications infrastructure. Additionally, eSAT's ChannelCasting(TM)(IP multicasting)

provides delivery for consistent, accurate, secure and reliable content instantaneously within an eSAT Virtual Private Network (VPN) or Private Network (PN).

****

Eutelsat Buys a Newbird

Eutelsat buys a new satellite to provide crucial capacity for back-up and expansion

Eutelsat's new satellite will satisfy crucial requirements for back-up and to enable expansion of digital services in existing and new markets. Provisionally called Newbird, the satellite will be equipped with 26 Ku band transponders in the FSS band that are switchable into three coverage areas - a Widebeam over Europe, a beam that reaches North and South America and a steerable beam. Due to be delivered to Eutelsat by Alcatel Space in a record 16-months, the satellite will be available in orbit in mid-2001.

Subject to the successful upcoming launches of Eutelsat's W1, Eurobird and SESAT satellites, Newbird will go into full commercial service at 8° W, at which point it will be named Atlantic Bird 2. It will assume continuity of services currently routed by Telecom 2A's 11 Ku-band transponders as well as open opportunities for services to new regions via its additional 15 transponders and considerably enlarged coverage options. It will also complement capacity on the Telecom 2D satellite whose Ku-band payload will be made available to Eutelsat customers at 8 degrees West in the second quarter of this year following an extension of the agreement reached in 1999 with France Telecom.

Eutelsat's new satellite and Telecom 2D will together provide 37 Ku-band transponders from 8 degrees West, which will be developed into a new multi-satellite position for Eutelsat.

****

Globalstar Completes N American Gateways

Gateway in High River, Alberta Signals Completion of Ground Segment for Globalstar Service in the United States

Globalstar USA, in conjunction with Globalstar Canada, has announced the completion of its gateway based in High River, Alberta, Canada. The end of construction on the gateway marks the completion of the ground stations serving the United States and Canada on the Globalstar system. The two other gateways are located in Clifton, Texas and Smiths Falls, Ontario.

Globalstar USA is on course to introduce full commercial service in the United States by the end of the first quarter of this year

Each Globalstar gateway receives signals from orbiting satellites, processes calls, and switches signals to the appropriate landline or cellular network. Strong encryption helps ensure voice and signalling security for each transmission. Globalstar gateways are owned and managed by Globalstar's

local and regional service providers around the world. In the United States, Globalstar USA, an indirect subsidiary of Vodafone AirTouch Plc., owns and operates the gateway in Clifton, Texas. In Canada, Globalstar Canada, a partnership of Canadian Satellite Communications (Cancom), Loral Space & Communications and Vodafone Airtouch Plc., owns and operates the gateways in High River, Alberta and Smiths Falls, Ontario. Globalstar's North American gateways cover the following geographic areas:

- High River, Alberta - covering W Canada and the NW United States

- Smiths Falls, Ontario - covering E Canada and the NE United States

- Clifton, Texas - covering the United States

****

Infonet Supplies Nestl&#65533;'s Multimedia Network

Infonet Services Corp has deployed a state of the art data and voice network for Nestl&#65533; using satellite and terrestrial technology. The network covers North, Central and South America, and the Caribbean.

The contract is valued by Infonet at US$8 million over its four-year duration and is in addition to services already provided to Nestl&#65533;. Nestl&#65533; needed a flexible network to link its existing domestic networks in the Americas and complete and consolidate its international telecommunications. Nestl&#65533; requested vendors to propose end-to-end telecommunication services including transport of data, voice, video and Internet/intranet facilities according to predefined quality-of-service requirements. While local needs and available infrastructure are highly varied across the Americas, Nestl&#65533; demanded an IP protocol-based network solution capable of providing consistent services throughout the region. To meet this demanding requirement, Infonet designed a combination of its terrestrial and VSAT Connect services to provide globally managed IP services and regional Global Multimedia Services to provide a low-cost, voice-on-data solution over the satellite links in the higher-cost Latin and Central American countries. Infonet manages customer support through its local office network with 24-hour global back up.

The terrestrial network is already operational in Argentina, Brazil, Canada, Chile, Colombia, Ecuador, Mexico, Puerto Rico, the United States and Venezuela, all connected to the Swiss headquarters. The second phase of satellite service deployment is well underway and, when complete, will include Nestl&#65533; facilities in Bolivia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Honduras, Jamaica, Nicaragua, Panama, Peru, and Trinidad and Tobago. The data and voice networks are already operational in more than half of these countries, with voice cost savings already making a useful return on the network investment. "Infonet's solution delivers seamless networking at a reasonable cost -- despite the disparity in telecommunications infrastructure between the industrialised and developing countries within the region," said Jean Claude Dispaux, senior vice president of Group IS and Logistics for Nestl&#65533;. "The scalability of the

solution is guaranteed even in countries with poor public telecommunication infrastructure, and independently of how this local infrastructure develops.
The same approach may be applied to other regions within Nestl&#65533;'s world-wide organisation."

****

Intelsat LLC Files for US Licenses

Intelsat LLC, recently created as a result of Intelsat's on-going privatisation efforts, has filed a consolidated application with the US FCC for authority to operate Intelsat's C and Ku band global satellite system. The application seeks U.S. licenses for 17 in-orbit satellites, 10 replacement satellites, and 13 orbital redeployments.

The filing of the application for US licensing of the Intelsat system addresses a critical element of Intelsat's plan to privatise by 1 April 2001. Intelsat, as an intergovernmental entity established by international treaty, currently is not directly licensed by the FCC or its counterpart in any other country. In connection with Intelsat's privatisation, the orbital positions and frequencies now registered internationally for Intelsat's use will become part of a national registry and licensed to Intelsat's private successor company.

The Intelsat Board preliminarily selected the United States as a candidate licensing jurisdiction for the privatised entity. The application for US licensing is contingent upon the transfer of Intelsat's orbital registrations to the US registry and its existing satellite assets to Intelsat LLC.

****

New Bird for Intelsat

Intelsat has decided to buy a next-generation satellite from Matra Marconi. The new bird will be named Alpha.

This marks a change in policy for Intelsat, which usually orders its satellites from US manufacturers.

Intelsat Alpha will cover a service area that includes the N America, W Europe and some of S America, using four C-band beams and two Ku-band spot beams to provide a mix of Internet distribution, TV, corporate networking and telephony services.

The satellite will cost more than US$ 100 million and will have a lifetime of 13 years. It will be based on Matra Marconi's Eurostar 3000 bus. Launch is scheduled for 2002.

****

New Wireless Licences in Hong Kong

The Hong Kong Telecommunications Authority announces the winners of five fixed wireless licenses and twelve licenses for long-distance services via satellite.

The Telecommunications Authority invited applications for fixed licenses to provide local fixed services using wireless networks in May last year and received 14 proposals. However, due to the restricted amount of bandwidth available, it decided to issue only five licences. The five winners are: New license holders are: PSINet Hong Kong Ltd., a subsidiary of US Internet carrier PSINet Inc; HKNet-Teligent Company Ltd; Hong Kong Broadband Network Ltd; Eastar Technology Ltd; and SmarTone Mobile Communications Ltd.

According to the Information Technology and Broadcasting Bureau the five winners have committed to a total investment of US$ 360 million over the next three years.

There were 20 applicants for satellite licenses which allow the holders to offer services via satellite internationally. Licenses were allocated to the 12 companies which met the required criteria: Hutchison Telecommunications Technology Investment Ltd; NTT Com Asia; Pacific Century Matrix (HK) Ltd; PSINet Hong Kong LTD; Teleglobe Hong Kong Ltd; China Digital satNet Ltd; Asia Satellite Telecommunications Co Ltd; CTI International Ltd; Million Point Technology Ltd; Far East Gateway Ltd; Galaxy Satellite Broadcasting Ltd; and SmarTone Mobile Communications Ltd.

Hong Kong's telecoms market was officially opened up to companies using their own infrastructure and satellite facilities on January 1st. Up to this date Cable & Wireless HKT Ltd had a monopoly on the gateway in and out of Hong Kong. Competition for national voice calls began on 1 January 1999.

Teleglobe - Teleport Operator of the Year

Teleglobe chosen as Teleport Operator of the Year by World Teleport Association

The World Teleport Association (WTA) has chosen Teleglobe as the winner of its annual Teleport Operator of the Year award. According to WTA's New York headquarters, Teleglobe was selected on the basis of the expansion and success of its three operating teleports (44 antennas) resulting from the unprecedented growth of its Internet and content delivery business. Teleglobe will be recognized for this achievement at the Fifth Annual Teleport Awards for Excellence on February 3rd at Satellite 2000, an annual Washington, D.C. satellite industry trade show and conference.

Teleglobe is the world's largest provider of satellite-based Internet connectivity, with Internet Service Providers (ISPs) in more than 70 countries connected to its backbone via satellite. Teleglobe also supports more than 150 Internet content providers and television broadcast networks.

Teleglobe has also announced that it is building upon its base of 44 antennas by investing $16 million in the deployment of four new antennas in the Caribbean and Latin America together with the expansion of its North

American backbone antennas. Necessitated by the unprecedented growth of Teleglobe's Internet backbone access business, the new antennas are being constructed in Buenos Aires (Argentina), Panama City (Panama), Rio de Janeiro (Brazil) and San Juan (Puerto Rico) and will be operational by the middle of 2000. The investment is part of Teleglobe's US$5 billion GlobeSystem(sm) network expansion plan.

Internet traffic over Teleglobe's satellite network has become a forceful growth engine over the past year. Within the past year, revenues attributed to Teleglobe's Internet business have grown more than 120 per cent, while the company's customer base has more than doubled. Today, 95% of the new satellite circuits installed are devoted exclusively to carrying Internet traffic. Teleglobe currently operates three North American teleports - Lake Cowichan, Pennant Point and Des Laurentides. These stations are linked to Teleglobe's GlobeSystem(sm) network, one of the largest broadband telecommunications networks in the world. Teleglobe also is an INTELSAT Signatory, has access to all major satellite systems, and is currently the only North American carrier with access to EUTELSAT.

Titan and Satellite Terminal Access to Provide French Multimedia Terminals

Titan announces strategic agreement to develop satellite based internet terminal for France Telecom.

The Titan Corporation, a provider of satellite telephony systems and services, has announced an agreement with Satellite Terminal Access (STA), a French developer of multimedia access terminals, to develop a low cost satellite-based Internet communication terminal. STA selected Titan Wireless, Titan's wholly-owned subsidiary, as its strategic partner following STA's selection by France Telecom to develop a low cost terminal for the company's planned satellite-based consumer broadband service. France Telecom's service is expected to provide an alternative to traditional Internet offerings such as cable modems and DSL.

Attaching to a computer or television through a set top box, the new terminal is expected to offer Internet services to residences with downstream speeds of 2Mb/s and upstream speeds of 64 kbps. The prototype development is expected to be completed by midyear at which time roll out of the first 1000 terminals is expected to begin. The new terminals will also be backwards compatible with all Titan gateways and network operating controls.

Under the terms of the agreement with STA, Titan expects to receive royalties on all products sold which incorporate the jointly developed technology, direct distribution rights in specific markets, and the exclusive right to use and sell all STA products in North America. As part of the agreement Titan will also acquire a 10 percent minority ownership interest in STA, providing Titan with another opportunity to participate in any future revenue stream associated with the sale of STA products. In addition, Titan has the option to acquire an additional 9.9 percent

ownership interest in the future.

Worldspace Awards Business System Contract

Stanford Telecommunications a designer, developer and manufacturer of communications systems for both satellite and terrestrial communications applications has signed a contract, initially valued at US$2.6 million, with satellite radio provider WorldSpace Corporation to design, develop, implement, and deploy the WorldSpace Business System (WSBS).

The WSBS will be the foundation of business operations for the WorldSpace network, a digital multi-media satellite broadcasting service to the emerging and underserved regions of the world. The WSBS will offer a complete line of business operations functions: Advertisement Sales and Traffic Management, Channel Leasing, Marketing and Pre-sales Support, and Subscriptions Service Management.

The Stanford Telecom team, which includes Sideout Technologies and Skjei Telecom, will assist in determining the needs of the WorldSpace Sales and Marketing operations, and developing the business system to serve those needs. This effort will involve the integration of commercially available software products with custom-built software to create an Internet-based business system.

SCIENCE

****

Compton Gamma Ray Observatory to be De-Orbited

NASA is preparing to destroy one of its most expensive and productive science satellites after a recent gyro failure left the satellite in a potentially unsafe condition.

The 15,876 kg, US$600 million dollar observatory may be brought out of low earth orbit in a controlled fashion, falling in the Pacific Ocean in March because of the high risk of injury to humans if it is left to decay naturally. The problem is the massive metallic parts contained in the observatory which are expected to survive re-entry. NASA has been aware of this eventuality since the satellite was launched and has kept more than a 1000 kg of fuel on board for a controlled descent at the end of the satellite's life.

When the satellite does crash to Earth the debris field will be large - some 26 by 1552 km according to NASA estimates. If the decay is uncontrolled there is also an estimated 1 in a 1000 chance of human injury. If NASA does lose control of the satellite then it will not decay naturally from its 515 km orbit until, probably, some time in 2007.

The Observatory was launched on 5 April 1991 on the Shuttle Atlantis with a projected life of two years, though project scientists hoped for six years of observations. Apart from minor problems with its thrusters and tape recorders the satellite has performed well and was expected to have several years more useful observing life until a gyro failure on December 6 called a halt. The satellite can still accurately point with the two remaining gyros, but the loss of another one would make the satellite useless and impossible to orient the satellite correctly for a controlled descent.

NASA engineers are currently working on ways to use the onboard instruments to steer the satellite and allow a safe de-orbit should a second gyro fail. If these work-around solutions are practical, NASA will keep the satellite in orbit until only one gyro remains operational. If not, NASA will try to bring the satellite to Earth safely in the Pacific near Hawaii on March 14.

Although the Observatory was designed to be serviced by the Shuttle NASA is not planning such a mission. A repair mission would take a year to plan and prepare and, furthermore, the satellite's fuel lines are thought to be leaking making a repair mission unsafe.

****

NASA Gives Up Communications with Mars Polar Lander

The Mars Polar Lander flight team has ended all attempts to regain communications with the spacecraft.

The final set of planned commands were sent on January 6 to place the spacecraft in UHF safe mode. Since then NASA's JPL has held a series of relay communications sessions using Mars Global Surveyor to listen for the lander around the clock. These attempt have now ended along with NASA's hopes of recovering the US$ 165 million spacecraft after a month of searching.

Mars Global Surveyor continues to perform special targeted observations of the Mars Polar Lander landing site in the hope of imaging the lander or its parachute. No evidence of the spacecraft has been sighted so far and these attempts will continue until early February. The spacecraft team is now involved in in depth analysis of terrain hazards within the landing footprint in support of the JPL Mars Polar Lander/Deep Space 2 Failure Review Board.

Along with the Mars Polar Lander, two Deep Space 2 surface penetrator probes have also not been heard from since contact was lost with the lander. The Deep Space 2 probes were due to be deployed from the Mars Polar Lander during its descent to the Martian surface and were to have landed several kilometres from the main spacecraft. Speculation has centred around potential hardware failures which would have prevented deployment of the two probes and which would have caused the lander to crash into the surface and into the roughness of the Martian surface in the landing area which may have made it impossible for any of the spacecraft to land safely.

****

NASA Selects TRW for Rapid II Program

TRW Inc has been selected to participate in a National Aeronautics and Space Administration (NASA) Goddard Space Flight Center program designed to streamline the acquisition of small- and medium-class satellites for space science, Earth science and advanced technology missions.

The Rapid Spacecraft Acquisition program, known as Rapid II, features a catalogue of satellite core-systems that can be acquired by NASA or any government agency using commercial procurement practices. By matching missions with pre-selected spacecraft, NASA offers scientific customers quicker and more affordable access to space.

The Rapid II catalogue features three spacecraft from TRW's family of lightweight spacecraft and includes derivatives of both the Total Ozone Mapping Spectrometer-Earth Probe built for NASA, which has exceeded its specified design life by 75 percent and continues to provide critical data on the earth's ozone layer; and ROCSAT-1, built for the Republic of China for scientific and earth remote sensing missions.

As NASA identifies missions, catalogue participants will be given an opportunity to compete for providing the spacecraft. All mission specific spacecraft will be awarded under firm, fixed-price orders, with delivery expected between 18 and 36 months after placement of the delivery order. Inclusion in the Rapid II catalogue enables TRW to bid for contracts with a potential cumulative value of $1.5 billion over the five-year contract period.

New Payload Transporters for KSC

NASA's long wait for a pair of new transporters for Shuttle payload canisters finally ended as they arrived by barge on Monday, January 17 from their manufacturer, the KAMAG Transporttechnik, GmbH, of Ulm, Germany.

The transporters, which carry spacecraft and International Space Station elements from payload facilities to and from the launch pads and the orbiter hangars, completed the process of a long-term analysis for the need for payload transporters to support Space Shuttle programs well into the new millennium.

Now that the transporters have arrived at KSC, engineers and technicians are being trained on its operation and maintenance. Each payload canister transporter is 65 feet long, 22 feet wide and has 24 tires divided between its two axles. The transporter travels 10 miles per hour unloaded, 5 miles per hour when loaded and weighs up to 172,000 pounds when the canister with payloads rides atop. The transport can hold up to 500 gallons of diesel fuel.

The transporters will be "outfitted" to support Space Shuttle payload launch activities. The outfitting includes adding various subsystems to the transporters for monitoring the environment inside the canister during the payload moves. The four main subsystems for the transporter include electrical power, environmental control, instrumentation and communications and fluids and gasses. The last of the two systems will be removed from the existing payload transporters, refurbished and installed on the new transporters. The other systems will be manufactured new.

The first use for one of the new transporters is anticipated to this summer.

****

Private Funds for Mir

The Russian Aviation and Space Agency (RAKA) has accepted a proposal by Energia to send two or three, people to Mir at the end of March. The mission has also received approval of the Russian government.

The proposed crew would consists of two cosmonauts with, perhaps, an actor. Cosmonauts Alexander Kaleri and Sergei Zaletin would spend at least 45 days on Mir. It is not clear what tasks would be performed by the crew - Energia want Mir refurbished for further long term habitation whereas the RAKA want to prepare Mir for controlled de-orbiting.

The third possible crew member is Russian actor Vladimir Steklov who has been in cosmonaut training since last year, preparing for a possible flight to film scenes for a movie about a cosmonaut unwilling to abandon a space station.

Whatever the mission's purpose, it must be supported by funds provided by Energia. The Russian government does not want to spend money on Mir, but wants to concentrate its resources on its commitment to the International Space Station. The government is, however, prepared to allow Energia to use boosters and cargo ships previously allocated to the International Space Station to cover government debts to Energia.

Energia has announced that Gold and Appel, a venture capital company based in the Cayman Islands, will provide US$ 20 million to the mission to Mir. US$ 7 million has already been transferred to Energia, with the rest due prior to launch. Gold and Appel is backed by American businessman Walt Anderson who made his fortune buying and selling telecommunications companies following the break up of AT&T. The Cayman Island company reportedly want to lease Mir for use by space tourists as well as using it as a commercial laboratory and for advertising gimicks. It also hopes to add further modules to the station.

Previously Energia had already agreed to pay for the January 31 launch of an unmanned Progress cargo spacecraft to Mir in the hope of encouraging foreign investors. This mission will boost Mir into a stable orbit to prevent its early decay and will re-supply the station with 150 kg or compressed air.

A report on the benefits and costs of potential commercial uses of Mir is currently being prepared by California aerospace company StarGate Research

Laboratory. The report is due to be published at the end of this month.

NASA is already complaining that continued support of Mir will take effort and resources away from the International Space Station causing yet more delays and will further inflate the cost. Energia are still promising that the delayed launch of the Russian-built living quarters for the ISS will take place at the end of July.

LAUNCHES

****

DSCS III B8

Launched: 21 January 2000
Site: Kennedy Space Center, Florida, USA
Launcher: Atlas 2A
International Number: 2000-001A
Name: DSCS III B8

The Defense Satellite Communications System (DSCS) III B8 spacecraft, the first of four remaining super high-frequency communications satellites to feature Service Life Enhancement Program (SLEP) upgrades, will provide improved, uninterrupted, secure voice and high-data rate communications to its Department of Defense (DoD) and national security users.

Lockheed Martin Missiles & Space will supply three more of these satellites to the U.S. Air Force Space and Missile Systems Center, Los Angeles Air Force Base, Calif., over the next year.

The 1,042 kg DSCS III SLEP satellites carry 50W TWTAs and have solar arrays that generate 1700W.

The next DSCS III launch is tentatively scheduled for October 12, 2000, from Cape Canaveral Air Station.

****

Launch Schedule

January 25: Galaxy XR on an Ariane 4 from Kourou, French Guiana
January 27: Russian military satellite on a Soyuz from Baikonur, Kazakhstan (also test of Fregat upper stage)
January 28: High Energy Transient Explorer (HETE-2) on a Pegasus XL from Kwajalein Missile Range, Pacific Ocean
January 28: JAWSAT, FalconSat, ASUsat-1 and OPAL (with picosats) multi-satellite payload on a Minotaur from Vandenberg Air Force Base, California
January 31: Progress-M1 refueling ship to the Russian space station Mir on a Soyuz from Baikonur, Kazakhstan
January 31: Shuttle Radar Topography Mission on space shuttle Endeavour (STS-99) from the Kennedy Space Center, Florida

February 3: Hispasat 1C on an Atlas 2AS from Cape Canaveral Air Station, Florida
February 6: Globalstar 7 on a Delta 2 from Cape Canaveral Air Station, Florida
February 8: MTI on a Taurus from Vandenberg Air Force Base, California
February 8: Astro-E on an M-5 from Kagoshima Space Center, Japan
February 8: DSP Payload on a Titan 4B from Cape Canaveral Air Station, Florida
February 11: Superbird 4 on an Ariane from Kourou, French Guiana
February 15: IMAGE on a Delta 2 from Vandenberg Air Force Base, California
February 28: ICO F1 on a Sea Launch Zenit 3SI form the Odyssey platform, equatorial Pacific Ocean
March: AsiaStar and Insat 2B on an Ariane from Kourou, French Guiana
May: Galaxy 4R on an Ariane from Kourou, French Guiana
August: Zvezda Service Module (ISS flight 1R) on a Proton from Baikonur, Kazakhstan

BUSINESS

****

Boeing Buys Hughes Space and Communications

Hughes Electronics has sold its satellite systems business to Boeing this week in a multi-billion deal, the two companies announced Thursday.

Under the agreement Hughes will sell Boeing the Hughes Space and Communications Company, which builds communications satellites, along with subsidiaries Hughes Electron Dynamics and Spectrolab, which develop electronic components and solar panels, respectively. Boeing will pay US$ 3.75 billion in cash for the companies.

The deal will allow Hughes to restructure itself to focus on becoming solely a services provider and develop new broadband wireless communications, and give Boeing the ability to become a full-service space company by selling both launch vehicles and spacecraft.

Michael T. Smith, chairman and CEO of Hughes said the company will use the proceeds of the sale to support the development of new initiatives, including its satellite- based Spaceway broadband wireless system under development, and become what he called a "serviced-based communications provider."

The sale is part of a larger restructuring that also includes the discontinuation of some of Hughes' cellular phone and other wireless product lines and a reorganisation of the roles of some of its top executives.

Hughes Space and Communications and the other companies purchased by Boeing will be organized into a business unit called Boeing Satellite Systems. Tig Krekel, the current president of Hughes Space and Communications, will lead the new Boeing unit.

The acquisition will allow Boeing to become a more integrated space services provider, selling both satellites and the launch vehicles that place those satellites into orbit.

****

Cidera Opens New Offices

Cidera (formerly SkyCache), has opened new offices in London, UK and San Diego, USA.

Cidera first established a marketing and sales presence in Europe in October 1999 to grow awareness of its satellite broadcast technology, which is expected to save ISPs, content providers and other corporations time and money by providing high-speed broadcast of Internet data such as Usenet News, live streaming media and massive files. In addition to more than 200 customers in the U.S., the company has already accumulated over 50 ISP customers in Europe and has now assigned several key employees to its London office to establish Cidera as a leading datacasting company in Europe.

Cidera's new San Diego office will work in conjunction with the company's office in the San Francisco Bay Area to deploy its broadcast- quality content delivery service to new international markets.

****

Picknet Sold, Picksat Not for Sale

PICK Communications Completes Sale of PICKNET Telecommunications Subsidiaries and Terminates Proposed Sale of PICKSat

PICK Communications Corp a provider of satellite-based broadband Internet services, today announced that it had completed the pending sale of its telecommunications subsidiaries B PICKNET and PICKNET UK (collectively, PICKNET), to Lebow Investment Ltd., a Middle East controlled investment company.

Lebow acquired 100 percent of the capital stock of PICKNET and assumed over US$ 10 million of outstanding debt of PICK. PICK will now able to focus on its two remaining Internet subsidiaries, PICKSat which provides broadband high speed access to the Internet through Cable Television providers in Latin America and PICK Online which provides radio and video streaming content to broadband networks in the USA and Latin America.

PICK also announced, that it has terminated negotiations to sell 80% of the stock of PICKSat, through a previously announced signed letter of intent.

****

Scientific Atlanta Sells Satellite Networking Arm to ViaSat

Scientific-Atlanta has agreed to sell its satellite networking business to ViaSat in a US$ 75 million cash transaction.

The acquisition includes Scientific-Atlanta's product lines for broadband satellite network gateways, data transactions, telephony, mobile asset

tracking, automated meter reading, remote monitoring, and space imaging; its manufacturing facility for satellite antennas ranging from 3.6 to 18 meters in diameter, as well as its satellite network operations centre.

ViaSat expects to finance the acquisition through an offering of debt or equity securities. The transaction is subject to various regulatory and other conditions and is expected to close within 120 days.

The transaction will enable Scientific-Atlanta to focus exclusively on its core business in broadband communications technology for new digital interactive services to consumer homes.

ViaSat expects to more than double its revenues, with a majority of sales in commercial markets following the transaction. ViaSat will becomes a leading independent supplier of satellite ground networking equipment, and will increase the resources it can apply to the emerging broadband-on-demand satellite ground equipment and services industry.

Nearly all of the employees of the Scientific-Atlanta Satellite Networks business will be offered positions with ViaSat.

ViaSat will also receive a contract to study the benefits of combining Scientific-Atlanta's PowerVu digital video compression system with ViaSat patented Paired Carrier Multiple Access (PCMA) to build an enhanced two-way satellite interactive television system. The system would offer digital television along with a low-cost interactive satellite return channel overlaid onto the same broadcast transponders. If successful, this concept would establish an economical method of offering two-way digital interactive direct-to-home TV services via satellite without requiring a separate dial-up telephone connection for the return path from the viewer.

SpaceDev Files

SpaceDev Files SEC Form 10-SB to Become a Fully Reporting Company; Firm Taking Necessary Steps to Advance to NASDAQ Small Cap Market

SpaceDev Inc, the world's first commercial space exploration and development company, announced that it has filed a Form 10-SB registration statement with the Securities and Exchange Commission (SEC) to become a fully reporting company, one of the necessary steps the company must take to advance from the OTC Bulletin Board (OTCBB) to the NASDAQ Small Cap market.

SpaceDev offers low cost commercial lunar, Mars and asteroid missions for sale as turnkey commercial products, a first for the industry. Also a first, SpaceDev offers fixed-price package delivery for science instruments and technology demonstrations into earth orbit, deep space and to other planetary bodies. SpaceDev designs and sells small, low-cost Earth-orbiting commercial or research satellites. The company is currently designing small, inexpensive orbital transfer vehicles (e.g. satellite inspectors and space tugs), and secondary payload micro-kick motors. SpaceDev has acquired hybrid sounding rocket, motor, and launch vehicle designs, and intellectual

property rights produced by the former American Rocket Company (AMROC).

Epson's Card PC Space Bound

Epson Card-PC makes trip on space shuttle as a single board controller for spaceflight payloads

Epson Electronics America Thursday announced it has tackled the next frontier -- Space -- with one of its Card-PC products. After successfully withstanding radiation testing at the Indiana University Cyclotron Facility, the CARD-PC/486D4 was selected to serve as the "engine" of the Boeing Single Board Controller (SBC) which has been developed for experiments on platforms including the Space Shuttle and International Space Station (ISS). The Epson CARD-PC underwent strict pre-flight performance evaluations that included tests of launch vibration tolerance and payload electro-magnetic interference before completing its first space mission aboard Space Shuttle Columbia in July 1999 (STS-93). Functioning as a full 486 CPU, the Boeing SBC provides command, control and data handling for payloads. It is a low-cost unit designed specifically to meet the stringent requirements of most non mission-critical Shuttle and ISS applications, using advanced commercial-grade components that have been tested thoroughly in flight environments to ensure reliability.

The ISS payload operations are supported by an on-board data communications network that has provisions for mass data storage, crew monitoring and interaction, and ground uplink/downlink. With the large number of active systems that will operate simultaneously on the ISS, NASA is finding it advantageous to have the internal functions of systems regulated by dedicated, embedded controllers that are linked to the network.

The CARD-PC/486D4 is an upgradable, integrated processor containing a CPU, DRAM, flash BIOS EEPROM, I/O ports, video controller and other functions of a PC motherboard in a compact unit measuring a mere 86 x 54 x 7.5 mm.

****

Globalstar Launches Mexico Service

Globalstar has begun offering its global satellite telephone service to users throughout Mexico.

Globalstar de Mexico is making the new service available initially through telephone orders and will be announcing its full dealer network later this month. Service is being introduced on a preliminary basis while the company finalises testing of its local gateway and completes dealer training. Full commercial service is expected to be initiated in February.

The Globalstar system is designed to provide affordable satellite-based digital voice services to a broad range of users. Globalstar de Mexico will also offer fixed phone units which can be used in remote communities to provide telephone services that, in many cases, were never available before.

Globalstar service will be supported in central and southern Mexico through its gateway in San Martin Texmelucan Puebla, and across the northern part of the country out of the Globalstar gateway in Clifton, Texas.

Globalstar de Mexico, founded in 1996, is a joint venture between the Mexican holding company Principia, S. de R.L., Loral Space & Communications and Vodafone AirTouch.

****

Tachyon Introduces Broadband Service

Tachyon will use Satmex 5 to offer two-way satellite Internet communication services. Tachyon claims to operate the only high- performance satellite Internet system providing a satellite uplink in addition to a satellite downlink.

Tachyon will lease transponders on Satmex 5 through the year 2005 with an option to increase its capacity as demand for their advanced technology increases.

Tachyon.net is now able to reach everywhere within the Ku 1 footprint of Satmex 5, covering the United States, Mexico, Guatemala, parts of the Pacific Ocean and the Caribbean. Service in Europe will begin within the month and Tachyon will provide service around the world by mid-2001.

Tachyon.net provides its high-performance, two-way satellite connections using an easily installed one meter dish at a subscriber s premises offices, factories, schools and so on linked directly to the subscriber s internet service provider (ISP). Unlike other fast internet technologies, with Tachyon, there is no need to wait for the construction of terrestrial infrastructure.

Tachyon will be the first provider of truly global high-performance internet links. Data rates range from 300 kb/s to 2 Mb/s. Tachyon is completely consistent with TCP/IP protocols at each end, and subscriber organisations can mix Tachyon service with existing Internet services. Tachyon is guaranteeing installation of the required subscriber equipment within 10 business days of orders.

Costs are quoted as US$ 4,000 per location with a US$ 470 to US$ 1,500 per month service charge. This price is expected to be reduced in the next three years to US$ 1,000 per location with a US$ 100 per month service charge.

343. Circular antennas - opinions?

Newsgroup: rec.radio.amateur.space
Date: 2000-01-27 00:00:00 UTC
From: jlbarber@wolfenet.kill.this.com
Message-ID: <86p0ht$6aq$1@sparky.wolfe.net>
Source record: 10427

Hi folks,

I have reason to put a circular az-el antenna system back up
within the next few months, so thought I'd check here for current
opinions - M2, HyGain? My previous experiences have been with KLM,
which doesn't appear to be an option any more. Due to time constraints,
I would much prefer factory polarity switching. I've heard that the
M2 antennas are not available with relays, is this true?

Also, back in the way-back-when at least, the body of opinion
was that HyGain crossed-Yagis had a relatively nasty pattern. Is
that still considered to be true? Have they been re-designed in
the last few years?

It would be great to build and tinker, but I need to get something
up quickly.

Thanks for any opinions,

Yes.
I use both for FO-20 & FO-29 access.
I have the versions with the reflectors, which improve performance on high angle (near-overhead) passes.

Can't argue with that logic!

Yup - was pretty sure I was going to build one anyway. Mostly interested in any 'gotchas' and experiences others have had. Can't exactly say I'm an 'experienced' builder, yet. TNC cables and copying the TTL/RS232 converter (PG-4S copy) for my V7A are as much as I've tackled so far.

Digi-Key has the XC5202 FPGA - about $10us + S&H. From where I sit, it's about as cheap to get the PCB and the chip. Mmm, may have to get a couple and stir some other local interest.

Always did want to teach the local bank something. Cutting an International draft for Euros may be just the deal!

Finally, someone out there figured out that in order to keep the amateur service it has to have a political critical mass. The politicians count votes when it comes to spectrum, if you want space on the usable portions of the spectrum we had best bring in plenty of young people. If code has to go to accomplish that, then good riddance to code. Personally, I copy about 13 wpm, well worth the effort...today I can copy the identifier on repeaters and an occasional aurora contact on six. Hardly worth the effort.

If you really want to keep people out of the hobby you should make the copy RTTY manually.

MHz
phone?

That would be an unauthorized modification to an FCC approved device which
would invalidate the approval under Part 15.

In fact, the FCC rules specifically require manufacturers to build such
devices in ways which would make it difficult for users to add antennas
which may cause the device to no longer comply with Part 15 Rules.

That's like saying a marathon winner only ran fast one time in his life.
Unlikely.

>Properly handled and publicised, this change can bring millions of new
>hams onto the air in the next decade,

Millions? Yikes! There's already a code-free license for V/UHF which
didn't draw millions, so you must believe that with the creation of
a slow-code HF ticket, millions will flock to HF.

Let's crunch some numbers: Our M/HF spectrum consists of 3.75 MHz,
with say, only half of it, 1875 kHz, useful for communication at
any one particular time of the day. If suddenly, as if by magic,
all current licensees were granted M/HF privileges, we could possibly
have 670,000 have attempting to fill that 1.875 MHz. Okay, I'll grant
you that folks have to work and sleep, so let's say at any one time,
we have one-fourth of all 670 kilohams on the air, with two per QSO.
That would mean each QSO would be separated by just 22 Hz. =:o

Okay, let's pretend that all 3.75 MHz is available all the time,
with say, one-tenth of all operators on at any one time: Now
each two-person QSO is separated by 112 Hz.

Worried that I didn't take into account frequency re-use? Suppose
we could manage three simultaneous QSOs on a single frequency;
each such grouping would be separated by 336 Hz.

That's with our current 670 kilohams. And you desire "millions"?

And if you have a way to make your own PCB, you can put it together
reasonably easily by buying the parts yourself. The Xilinx FPGA should
not be too hard to get hold of -- the catch is that many of the
distributors will have minimum order quantities or similar. Luckily,
here in Australia our local Xilinx distributor did not, so I picked
up a couple of these parts easily.

I built my own a year or two ago, although to be honest I haven't
really had a chance to use it yet. I did test it by connecting the audio
into the sound card and using the soundmodem on linux though.
Now I think I'll go out this afternoon and get the bits to connect it
to my new 70cm FM box.

For most Extras, that's all it is, because most Extras rarely (if ever) light up on HF.

Not that there is anything wrong with an Extra spending his or her entire on-air time on an HT, but too many of them think that they are something special because the were able to copy 20 WPM on ONE occasion, years ago.

I got my Novice ticket nearly 20 years ago, and upgraded immediately to Technician (thus "Tech+") by taking the General written exam. If I had ever been willing to take the time to get my code speed up, I would have been a General (and I am looking forward to the change). I will not likely go to Extra because an Extra can't do anything that I want to do which I can't do as a General.

While a lot of the Extras are whining about this change, I think that given 5 years they will see that it was the only way to SAVE ham radio. The artificial barrier imposed by "Titanic Mode" skills have kept MILLIONS of kids from getting ham licenses over the decades since large chunks of the General allocation were sliced off to create Advanced and Extra in the "Incentive Licensing" debacle.

Properly handled and publicised, this change can bring millions of new hams onto the air in the next decade, bring back school ham clubs, and pull ham radio's foot back out of the grave.

I certainly would have mentioned it if I weren"t sworn to secrecy. I am afraid by alluding to the manually copied RTTY I may have given it away. I apologize.

The4 reason for the RTTY of course stemmed from the lack of capitals and lower case in the Morse Code. This is an enormous weakness given you could not tell where the sentences started...you had trouble describing things such as democrat and Democrat...big difference in meaning. So of course we had to develop a system that could distinguish between the upper and lower case. Eureka, baudot.

Next time around we can discuss analog and digital baudot...but perhaps we can leave that for another night.

Hello,
I'm arrived a short while ago on satellites (FO20 - FO29 - RS13). So i need your advice.
What antennas have the most impressive results (for you) on VHF and UHF (perhaps helix ?).

Many thank for any possible information.
And please excuse my poor poor english ;-)

73 from FA1CIL Pascal.

10 WPM RTTY isn't so hard either. But 60 WPM RTTY is of similar
difficulty to copy by ear as 60 WPM Morse. I can recognize RYRYRY
and my call sign in 60 WPM RTTY, but that's about all I can do by
ear with it. I can't even do that with Morse, but that's because I
don't operate much Morse. I do, or did before PSK31 came along,
operate quite a bit of RTTY.

OK, my equipment set-up is as follows:
- FT-847
- ARR P432VDG preamp on 70cm, right at the antenna (this helps a lot!)
- Teletec DXP 175 amp on 2m
- the Eggbeaters are mounted on 10ft Radio Shack masts/tripods

The best operation I get is portable, in a aprking lot with relatively clear take-offs.

I can also operate from the balcony of my apt, but limited there by surrounding buildings.

These are simple antennas,don't expect too much from them - but they obviously avoid the complexity of ax/el with beams.

On occssion I have worked horizon to horizon - depends on the pass.

I have started to build the square version of these antennas described by K5OE (http://members.aol.com/k5oejerry/eggbeater2.htm), with radials at a different distance from active element to favor low angle passes.

So far, built the 70cm version; not better than the Eggbeater; I need to check SWR. Work has stopped play!!

Why would I be embarrassed? It isn't like Jeff is going to call him up and hear "Yup, I dunno the first thing about working on radios." The ham in question made a big name for himself in the Prescott, Arizona area in the late 1980s. I have no idea if he is still there or not, and I really don't much care. I stopped paying attention to him after the mike-jack incident and after I had to make a 120-mile round trip to go turn a serial cable into a null-modem cable because he wasn't able to desolder and resolder two leads in a DB9 connector.

The only one I'm embarrassed for is Jeff. He is so impressed with being an Extra that he thinks all Extras are something special, and is convinced that I can't be telling the truth about this.

About a year and a half ago, the TV station I was working for had an apparent problem with the captioning system. The Vectorscope showed a visual trace of the incoming caption signal, and (while the engineers were starting to tear apart the control room, trying to figure out what was happening) I took a moment to look at it. The signal was a repetitive set -- ABC's version of RYRYRYRY. When I explained it (these guys didn't even know what RTTY was), they contacted the network, who confirmed that they weren't sending text -- they were sending RY<clear>RY<clear>RY<clear>!

>Why would I be embarrassed?

Because you got caught making up "facts" again. If you want to carry
any credibility on the NGs, back up your examples with evidence which
can be confirmed by third parties, or at least give the "victim" in
question a chance to defend himself.

>The ham in question made a big name for himself in the Prescott, Arizona
>area in the late 1980s.

So now you've pinpointed his approximate QTH and have limited the
embarrassment to just "prominent" Extras in Prescott. The only fair thing
to do now is to give his identity and provide him the chance to respond
to your accusations.

>The only one I'm embarrassed for is Jeff. He is so impressed with being
>an Extra that he thinks all Extras are something special, and is
>convinced that I can't be telling the truth about this.

Wrong again. I'm only interested in giving an accused a fair chance to respond so as to hear both sides of the story. There are too many one-sided accusations made in this forum. Very distasteful, and not gentlemanly at all. Fight fair, Keith.

Two guys were sitting on a park bench. One turned to the other and
asked, "Are you a Liberal or a Conservative?"

"I'm a Conservative," the other man proudly replied.

"Why are you a Conservative?" the first man asked.

"Because my father was a Conservative, and so were my grandfather, my
great grandfather, and his father before him," replied the other man.

"What if your father was a jackass, and so were your grandfather, your
great grandfather, and his father before him?" persisted the first
man. "What would you be then?"

The first man thought for a moment, then replied, "A Liberal."

Not Reagan... Bush... nowhere near a conservative and one who caved to
King Hussein's response to a whiner in the US.

Basically proof that Bush felt he could 'do something' to please a
foreign power that 'did not matter much'.

Well, it mattered to most hams!

That was one of Bush's blunders causing him infamy in my regard and the
regard of hundreds of thousands of others.

Don't cloak yourself in fake mystery.

What are the implications?

They are:

ONE single message, EIGHT newsgroup flags attached to it.

I don't assume, these are unspeakable implications. Or did you really
believe, that a message posted to eight newsgroups criss crosses the
internet as EIGHT individual messages, consuming eight times the
bandwidth? The designers of internet had more brains than that.
Though you can read the message in eight groups, it only exists ONCE.

The trouble is these damn connectors keep getting
smaller while I keep getting older. I'd just as soon
NOT have to solder DB9 connectors at all unless it
was an emergency repair.

More to the point, the
ability to solder is not at all an indication of technical
competency anyway.

I have used one for about 4 years now. It is a fine antenna that does
exactly what it is supposed to do. On the Mode A birds, it can't be beat.
No need to track the sat with a beam for a real good uplink or downlink
signal. I have also had good results on terrestrial SSB work. I primarily
use it now on 137Mhz WXSAT work, where it is just superb.
Hows that for an opinion?

412. UO-22 UOSAT5 Status

Newsgroup: rec.radio.amateur.space
Date: 2000-02-01 00:00:00 UTC
From: joepwalker1@webtv.net
Message-ID: <18404-38973D4F-28@storefull-164.iap.bryant.webtv.net>
Source record: 10252

After all of the recent talk about being able to work 9600 baud mobile and the tie in's with APRS - I thought I would give some of the Packet birds a listen.

Last night during a pretty high pass over Central U.S., I heard the UO22 bird but did not hear any audio -- heard an open carrier with the dopplar shift on 435.120 FM but no packet heard.

Are these birds turned off during night passes to save on batteries?

I expected to hear packet similar to what we used to hear on the old MIR passes but heard nothing. I know if was there from the carrier.

Any thoughts?

Thanks and 73's

Joe KB5FAS

413. AO-27 Status

Newsgroup: rec.radio.amateur.space

ArianeSpace has an "upcoming launch" page at
http://www.arianespace.com/status_nearterm.html that goes until the
middle of the year. We can play guessing games with that information...

The newsletter at http://www.arianespace.com/interior/Ariane150AN.pdf
lists Phase 3D as being "compatible with the 5 or 6 Ariane 5 launches in
2000". I doubt that means they are guaranteeing a 2000 launch.

Sorry but Kennedy was murdered in 1963. Johnson was president for the
remainder of Kennedy's term. He was re elected for 4 years. That
brings it to 68. Incentive licensing was introduced during the Johnson
regime. It was implemented in stages. I received a notice from the FCC
in Summer of 68 for operating in the Extra sub-band (7.010). It was
vacated because I had been out of the country and did not know
the "latest".

This is what minimum wage assembly line people do--I wouldn't brag about
being good at it. :)

Or better still: Q: What is the definition of a Conservative?

A: A Liberal that just got mugged.

Good proof of the axiom that both are bankrupt, corrupt ideologies that have everything to do with imposing oneself on others, and nothing to do with morality, truth, or efficacy. Both of them stink.

Not only that, but if you are using a news reader much more modern than
TIN, reading a message in one group should mark it as read in the others
as well, so you don't see it twice, unless you want to torture yourself
with everything that everyone else is doing wrong.

I just got through wading through all the restructuring comments.--I think I have probably been around many years longer than most of you abd I can make a few observations. The FCC has acted--it did not listen to ARRL, Fred Maia, or many others--it did listen to QCWA. But no matter, it is over and it is what we have to live with--and the guy that was complaining about dems and repubs--that is inane--national politics has very little to o with amateujr radio--I should know because I spent a great deal of time in Washington. (DC) dealing with the bandits down there. The only time the pols are going to get into the act is when your neihbor has TVI--then we have troubles

What were you expecting to hear? 9600 baud MSK sounds like noise
(to humans, anyway...), not at all like the AFSK stuff Mir used to
send.

UO-22 is having some thermal problems due to long-term changes in
its orbit. This is all well documented - check the ANS pages on
the AMSAT-NA web page.

423. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782r6$8gn$1@news.hawaii.edu>
Source record: 10257
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Close, but no cigar. Check QST in 1962, and the 1963 edition of the
ARRL licensing book. Incentive licensing was in place before Kennedy
was gone.

Not so. Most R&D folks have their stuff assembled and
built by lower level techs. The cost of an R&D person
is too valuable for basic assembly work.

Cheers,
Bill K2UNK

Bill OM,

Maybe most, but not all. I design PC layouts, acquire parts,
assemble, and solder my own prototype circuits still, (including SMT
boards) even after 34 years as a design engineer, and I for one like it
that way. Apparently my employer does not consider that to be too
expensive :)

> extinct.

How ham radio is regulated has nothing to do with personal survival or species survival. Better luck next time.

No one has YET shown how this BS of theirs is better for anyone except two groups:

1) NCI type whiners who refuse to work for what they want, preferring to whine for what they want, and who sit there holding their breath and stamping their little feet until the FCC wimps cave in and give them what they demand, and

2) Commercial interests who could not care less about ham radio and fall into two groups... those who seek to sell more radios to increase their bottom line and those who slaver over the idea of ham radio's demise so they can turn a profit from what they generally considered unproductive resources.

Sorry, but I for one am not interested in benefitting EITHER of those groups.

And ham radio suffers either way.

Some 'improvement'... NOT!

Hello. I'm getting started in satellite work. Has any one heard of or used
a method of Eclipiticaly, spelling may not be correct!!, phasing of antennas?
I read something about it some time ago, and now cannot remember where I had
read it. If I recall correctly, it was a method of phasing yagi antennas.
Again, being new, i'm really struggling with trackig programs.
WinOrbit/Instatrak. I see by other postings, others are as well.
any advice appreciated! 73 Dennis

Bull Sh*t, Who ever said a change for the worse counted.
Example:
Here in New York we have the still married wife of a unconvicted rapist, liar, adultery committer and her team of Hollyweird freaks and screw ball's. All scripting a freak show using an *acquired empty house* to make her a senator..... to make things better, LOL

She has never been on the subway or come to see her *new* favorite New York ball, and hockey team's in fear of getting the Bronx cheer as well as Booed on TV.
Yet Rev.Al (a frequent guest of every jail) and the hordes work capable healthy welfare dwellers, homeless felons, ileagels and feminist's love her.
That is can not be good a good sign, its common sense.
Keep liberals out as long as you can.
NO THANKS !

How critical is it to adjust for Doppler shift on the uplink and/or downlink of the 9600 baud pacsats. Could one set the transmitter and receiver on the nominal frequency and still copy transmit and receive small files and APRS position reports?

You're changeing the subject instead of answering the question, Robert. The subject is not about change. The subject is about why a date is a reason for change.

What does a date have to do with change? Why does a date justify change? Why do people say, "its the year 2000," to justify the change they want, when the year 2000 is a date, not a reason?

It would make just about as much sense to say the sky is blue, so we have to change ... (insert whatever). There is simply no connection between the two.

It's moderately cricital, especially since the 70cm
downlink Doppler (12 kHz) is wider than most receiver's
IF filters.

For optimal results you want the frequency right on the
nose. How far off you can get away with depends on your
radio and modem. Why not try it and see?

Tomas - NW7US wrote:

<snip>

> Anyone want to express opinions regaring building all the coils and capacitors out of raw materials and junk? Like chewing gum wrappers??? Oh, that'd mean I'd need a TR switch setup to isolate it during transmit... hmmm. Dratted QRM.

Since the stuff I snipped had no mention of any specific construction project, I'll assume you meant the traps for your gravity-inverted vee.

Why not? As I've mentioned here (RRAA) before, Hams used to be able to build their own _tubes_! Tasks like winding coils and stacking caps are cake compared to glassblowing, and much safer (silicosis).

There is the problem of assuring value stability once the parts are built. You can calculate of course, but edge effect creep in with caps, and inductors like to "grab" nearby magnetic materials and change their values. Coils are fairly easy to tweak if you make provision for that during construction, but trimming a homemande cap can make you crazy. Choose wire size and foil/dielectric for power-handling capacity, and go for it. Oh, and don't worry about the smoke, it's traditional ;>)

Thousands of poor souls must have considered the exams for the last five years tough. The number of Generals has been about equal to the number of Advanced holders. If the exams were so easy, why didn't the thousands of Generals upgrade?? no code was required. What makes anybody think these Generals who couldn't--or wouldn't--pass the Advanced exam will now jump to Extra??

Something I have wondered as well, for many people the theory is just as
bad as the code (or worse).

There will be some upgrades, there will be some new Generals/Extras. The
average age of Hams will still go up. Also, after the first 'burp' of
new/upgrades has happened, the number of Hams will go -down-.

This is due to a number of factors: 1) Most people (us included I guess)
would rather be on the 'Net on then on the air. 2)It will still be
"difficult" to become a Ham (while all it will take to get on the 'Net is
$$$). 3)The attitude of some shown here will be reflected (just as it was
on the no-Code Techs), causing the new Hams to feel unwelcome, and they
will drop out.

The FCC handed us a flawed policy, the best we can do is live with it
and -NOT- blame the new/upgraded Hams. Else we -will- drive them away and
the the hobby -will- die.

Exactly, I predict a bunch of tech+'s jumping to general for the privileges.
I predict a bunch of advanced jumping to extra. I predict the great majority
of generals not jumping to extra.

Don't know Cecil when I took the General test at the first of January there were nine people there all were Generals or Technician plus operators upgrading. We went back to take the Extra Test on the Second of February and there were over 30 people there mostly Technician plus and Generals upgrading and several old time Advanced operators taking the Extra test. Several more were taking the five word per minute test on their way to getting a General or higher license class.

I have been to one of these session several times the last few years and while they usually had five or six people each time, I have never seen it where they had to use every table in the room and add four more along the wall just to accommodate all the people who wanted to upgrade.

The same has been happening at other sites around here. The one where I took the advance Test usually had only three to five people upgrading on average and they had twenty people taking the test. again most of the people upgrading were long time Generals or Advanced class operators on their way to getting their Extra class ticket.

Maybe this area is just a isolated occurrence but I am willing to bet that the number of people who will upgrade to General or higher will far exceed what most of the PCA's think. I know they would like to believe that anyone who has not passed a twenty word code test in the past has no interest in upgrading their license class but I strongly suspect that will be wishful thinking on their part.

Now before old Dick or one of his cronies cries out that these people are not real operators and are taking the easy way, let me say Most of those I talked with were long time Advanced and General class Amateurs and more than one told of taking his last test in front of a FCC official.

Dick is suffering from sour grapes because he can't upgrade and therefore
can't learn something new. :-)

Hi all, I'm new to satellite work and have a couple of questions. I've been trying to use AO-27 since all I have is fm radios. Usually I make attempts on the weekend. Is it active on the weekends? So far I've not had any success. I don't seem to be making contact with the bird. I know its only up during day light passes. I'm using a mobile radio (45 watts) with a Diamond vertical mounted on the roof. It advertises a 6db gain. I think this should be sufficient since many people us hand helds.

So what do I do? What is the proper way for initiating a contact? Do I call cq or what?

Any help and suggestions are greatly appreciated.

It is not really a matter of "up or down" but of the band you are using.

Assuming uplink on 2M and downlink on 70cm: on the uplink it is not really
a requirement to compensate for doppler, but it will always help if you
do so. On the downlink, it is essential or you will miss most of the pass
on a typical-bandwith receiver. But you can use an "AFC" type of
compensation, that tracks the receiver frequency +/- 8KHz or so depending
on discriminator DC output. You will need the discriminator output for 9k6
anyway, so when you take care to couple it DC you can attach a window
comparator that tunes a RIT.

When you want to go without doppler, don't set the receiver to center
frequency, but a few KHz above or below it; the frequency changes quickest
near the point of closest approach, when the receiver is to be tuned to the
nominal frequency. So when you set it to a "compromise" about 3-4 KHz
above or below the center, it spends more time in that window. And your
antenna will probably have more gain at lower elevations as well.

Rob

Hi Blaine,

You may want to crank back on the power a bit. AO-27 has a very sensitive receiver. About 5-10 watts with a 6db gain antenna on 2M. Now, 70cm is different. You need a good recieve system to hear it. About a 6db gain antenna & a preamp should do it. Always with satellite work, don't call unless you could hear the bird well. AO-27 is a crowded bird and getting on is sort of like working a DX pile-up on a your local 2M repeater if you could imagine it. Be patient and just send: "(your call) Listening" That should invoke someone to call or answer you. Knowing you grid location helps. You could learn that by looking up your call on QRZ.com. Take care & good luck.

The unit is a complete Amplifier system including AGC, Isolators at input
and output,
Gain > 47 dB, Power out at 1 dB comp. point > 39.5 dBm (measured after the
isolator).
The case is small enough to mount it directly at the feedhorn of a parabol
antenna.
System was originally used as transmitter amplifier in 16 QAM radio relay
link (SIEMENS).
Amplifiers are tested in the factory (test protocol)and not used at all.
Power supply +11 to 14 V 7 A and - 9.5 Volts 100 mA.
Detailed datasheet and documentation incl.
Price 900 DM without transport costs.
Power output can be raised by skilled amateurs to more then 10 Watts by
replacing the matched
10 W Transistor by a newest 15W Transistor (Toshiba)....

Jochen

This does not make it any shorter, interpreting it prevented me from seeing it, but it was still 108 lines. I automatically reject news postings over 100 lines and automatically download the rest (with other kill rules dependent on group. This is to avoid people who quote a long message to add a few lines, followed by someone else doing the same, followed by someone quoting it all to add "yes"! It was only because I was curious about the thread and wonder what you had to add to the subject that required 108 lines and therefore requested your article.

Are your postings so important that you must make them seven times larger with a secure signature, what if everybody did that. The Internet would not be able to cope without a large investment by providers which we would have to pay for. End users would have to spend more time on line which many people have to pay for (either phone, or ISP, or both). I use PGP for email, I do not see the need for it in news; with email I only need a small number of keys, if I wanted to use it with news I would need a vast number of keys.

Blaine I have worked through AO-27 a few times but not with a vertical antenna. I have never heard it with either a discone or 440 ringo either. You have to have a beam of some type. Visit the Arrow antenna site on the net. That is a start. I have used an old Cushcraft AO-P anteena array to work through this satellite. That is a twisted pair of beams for 145/435 mhz. The easy FM satellite that you can hear and work on your HT is Sunsat, or SO-35, which has a pass over USA today at 1457Z and on Sunday at 1418Z. Do you have a computer and tracking software? That is critical. I made my first contact on Labor Day and have worked 31 states mostly through RS-13 but I have used SO-35, AO-27, and AO-10. I have had no luck with FO-29 or FO-20 but am working on it. I use a Cushcraft 2 meter Turnstile antenna for most of my uplink work. I am in the middle of restoring the AOP and am gatheirng new coax, plugs, and have two mast mounted preamps (by Icom) to install. I am also looking for a AZ-EL rotor but in no hurry. The Phase 3 D statellite due to go up soon should eliminate the antenna being such a critical part of your station but till then it remains very important. Hope this gives you an idea as to what works and doesn't. Let me know how else I might help just remember I am new to this too but having more fun here on the sats that working DX and I have 300 countries worked. 73 Pat, K4AVO

Ian ... I always use a PGP digital signature on my usenet posts for the
following reason ... there are twits out there who have shown a
propensity for alterning and reposting things I've said to make it appear
that I have said something I didn't say ... for the purpose of
"discrediting"
No Code International in the "code/no-code" "debates" on r.r.a.p and
other groups.

Using the PGP signature makes it possible to prove that the post was
altered ... and it really doesn't take that much additional bandwidth.
(I don't use the Verisign sigs, so I am not familiar with how much
additional "bulk" they add ... but PGP's overhead is minimal.)

My point is that using digital signatures is, in some cases valid and
even necessary.

73,

BT Opens Los Angeles Teleport

BT Broadcast Services has announced that it will open a second teleport in the United States to accommodate the increased demand for broadcast services and the growth in business in both the Pacific Rim and Latin American regions.

BT's new state-of-the-art broadcasting facility will be located in Marina del Rey, California, and provide one-stop shopping for a complete range of broadcast transmission solutions throughout the US, including satellite, fibre and microwave transmissions, and connectivity to BT's Global Digital

Network. The new teleport is slated to open in Autumn 2000, and will be situated near the world's largest entertainment industry and close to news organisations and international businesses located in the Los Angeles metropolitan area.

BT's LA Teleport will include a 24-hour booking centre and round-the-clock Master Control Room for monitoring of feeds. Similar to the Washington DC teleport, the new facility will provide permanent uplink and downlink capabilities for distribution of regional and domestic channels, as well as analogue and digital options on a wide range of domestic satellites.

****

Eutelsat Gains FCC Licence

The US Federal Communications Commission has granted the first licences for accessing Eutelsat II F2 satellite capacity from within the USA for services that will include IP broadband and video contributions. BT North America Inc and Group W Network Services (CBS Broadcasting Inc) are the first two companies authorised to uplink to Eutelsat.

FCC approval means that Eutelsat is now open for business to US-based customers who have requirements for transatlantic connections and who are seeking access directly into the European market for corporate and consumer communications. Opportunities also exist for delivering content from Europe into the US market.

In 1999 Eutelsat positioned its first satellite over the Atlantic, at its 12.5 degrees West orbital slot which provides visibility of western Europe and the eastern seaboard of North America. It also launched construction of a new Ku-band satellite, called Atlantic Bird 1, which is due to go into orbit next year. Atlantic Bird 1's 20 Ku-band transponders will give North and South American content providers access to Europe and beyond as far as the Middle East, opening up important opportunities for satellite television and data broadcasting for the corporate sector and for the consumer market. Via a recent agreement with Loral Skynet, EUTELSAT is also using four transponders on the Telstar 12 satellite at 15 degrees West for transatlantic services.

****

Datron Demonstrates Internet Access in a Moving Vehicle

Datron Systems Inc has announced it has successfully established a high speed Internet connection to a moving vehicle using one of its production model DBS-4500 In-Motion satellite television antenna systems.

Through a satellite link to a van driving at highway speeds, this connection provides full Internet capability to download large files, access Web sites, send and receive e-mail and perform other tasks normally accomplished through a home or office terminal.

The techniques used are applicable to all of Datron's mobile satellite systems, which serve business and commercial aircraft, boats, recreational

vehicles, buses, vans and sports utility vehicles.

Following the announcement Datron's share price nearly doubled in value during frantic trading on Nasdaq. Some 4 million shares changed hands during the first 2 hours of trading compared to a normal trading volume of 20,000 shares.

****

Globalstar Opens for Business in Belgium, France, Spain and Portugal

Globalstar has initiated full commercial service in Belgium, France, Portugal and Spain through its partner service provider TE.SA.M. (T�l�communications par Satellites Mobiles), a joint venture between France Telecom and Alcatel.

This brings the total number of locations where Globalstar service is available to 15 countries across Europe, Asia, North America and South America. TE.SA.M. has indicated that it plans to introduce service in a further nine countries covered by its European gateway in the weeks ahead.

Globalstar phones have already been extensively used in France for many applications including Y2K contingency communications and emergency communications after damaging wind storms last December. The phones have also been used on a test basis by service staff of Electricit� de France (EDF), a major French utility, in remote mountainous areas where cellular service was unavailable.

TE.SA.M. is introducing two types of Globalstar service:

Dual-mode Service, allowing customers to use normal cellular service from an approved GSM operator as well as Globalstar satellite service whenever the user travels outside of cellular range. Both services are accessible from a single phone, with a single number and a single monthly invoice.

Single-mode Service, providing Globalstar-only service for customers who do not require cellular service or who prefer using cellular from a separate phone. Single-mode service will be available through distributors specialising in satellite services.

Other countries where TE.SA.M will soon introduce Globalstar services include Andorra, the Czech Republic, Gibraltar, the Netherlands, Luxembourg, Monaco, Morocco, Poland and Tunisia. TE.SA.M. will also be introducing service in many parts of South America, the Middle East and Asia through a series of other gateways across these regions.

****

GSA-FTS Expands Hughes Global Services Contract

The US Government's General Services Administration's Federal Technology Service (GSA-FTS) has awarded a second contract to Hughes Global Services Inc (HGS) to provide a wide variety of satellite services that can be used by the Department of Defense (DOD) and all federal agencies.

The new Indefinite Delivery, Indefinite Quantity (IDIQ) Government-wide Agency Contract (GWAC) has a US$ 490 million ceiling over six years if all options are exercised, and is five times larger than the original contract which was awarded one year ago.

The contract follows a year-long pilot program which provided "one stop shopping" for government agencies requiring satellite communications.

To date, more than 40 federal agencies, including the Internal Revenue Service, the Social Security Administration, the Centers for Disease Control, the Department of Veterans Affairs, the International Broadcasting Bureau, the Agency for International Development, as well as the Armed Forces and the Department of Defense, have ordered services under the program.

Current satellite product and service offerings under the contract include domestic and international mobile satellite communications; fixed satellite services, including long-term and occasional-use bandwidth from multiple providers, terminals and videoteleconferencing at C- and Ku-band frequencies; and the DirecPC(R) data delivery capability. In addition, HGS is including its DemandNet(TM) and SkyMedia(TM) products in the contract.

DemandNet combines commercial very small aperture terminal (VSAT) technology with a global satellite constellation to provide affordable bandwidth services on-demand.

SkyMedia provides cost-effective video delivery, digital data broadcast and high-data-rate Internet access for distance learning and data sharing.

In the future, HGS will include Spaceway(TM) terminals and services and other emerging communication services.

More than 100 orders for satellite communications through the GSA-FTS satellite services IDIQ program have been placed. All civil or military federal agencies, as well as other authorised users such as NATO, the World Health Organisation, the Red Cross and Native American tribal governments, have access to the HGS satellite services contract. DOD users have accounted for approximately one-fourth of orders to date. An expanding area is the use of the contract for government distance learning, where individuals within one agency have access to video conferencing and classroom instruction.

****

ICO and Hughes Renegotiate Satellite Deal

ICO Global Communications has renegotiated a deal to buy 12 satellites from Hughes Electronics.

ICO is also reported to be near to ordering another four satellites. The renegotiated deal is still preliminary, with no formal agreement yet having been signed. The value of the agreement is believed to be up to US$ 3 billion.

The industry rumour is that the satellites will be modified to cater more for data based services, such as the Internet, rather than the originally

intended telephony.

This eleventh hour change of direction for ICO could well be the influence of new investor Craig McGraW who is reported to see ICO in the role of pre-Teledesic. Such a design change could also be the reason why the launch of ICO's first satellite, which was scheduled to be orbited by Sea Launch a the end of January has been put on hold for a few months without explanation.

****

Inmarsat Enters VSAT Business

Inmarsat has made a `knowledge acquisition' of part of the business of EAE Limited, a subsidiary of the EAE Group. The Aberdeen based business will now trade as Invsat Ltd, a subsidiary of Inmarsat Holdings Ltd. The part of the business acquired from EAE Limited provides integrated telecommunications systems and services including satellite systems, radio systems and very small aperture terminal satellite (VSAT) solutions to the oil and gas, maritime, government and emergency services markets. The business employs approximately 80 staff.

The acquisition is a significant milestone in Inmarsat's strategy to grow both organically and through acquisition. It is the company's first venture outside mobile satellite communications, its traditional area of operations, into the complementary world of VSAT technology.

Bob Buskie, EAE Limited Managing Director, will become Managing Director of Invsat Ltd and report to Robert Johnson, General Manager Maritime at Inmarsat Ltd in London.

****

Telesat Awarded Control Contract for XM Radio Broadcast Satellites

Telesat Canada has been awarded a 15-year contract with XM Satellite Radio Inc to manage the satellite-based infrastructure of XM's radio service scheduled for launch in the first half of 2001.

Telesat will use its satellite control centre in Ottawa to monitor and control the satellites and will also build primary and back-up satellite control centres in Washington, DC and Calgary, Alberta.

****

PanAmSat Receives Service Licence for Peru

PanAmSat has received a licence permitting the supply of Internet and telecommnications services directly to client from the Peruvian Ministerio de Transporte y Comunicaciones (MTC).

The new licence is a "concession for the provision of public long distance, national and international services" and allows PanAmSat to provide data, Internet and telephony services to clients in Peru. In the past, PanAmSat

has been obliged to offer services through Telef�nica del Per�.

****

Telesat Serves Satellite Customers in the USA

Telesat has launched a US service and sales division that will offer domestic and international satellite transmission services to broadcasters, cable companies, telecommunications resellers and other business customers across America.

In conjunction with InSight Telecommunications Corporation, a leading team of broadband content delivery professionals, Telesat has created a new division known as Telesat Communications Services.

Telesat Communications Services begins service to US customers via its two main broadcast satellites, Anik E2 and Anik E1 (which will be re-pointed to serve the continental US). Telesat also plans to serve US customers from Anik F1 after it goes into service this autumn.

Headquartered in Boston, the new division also has offices in Atlanta and Los Angeles, and plans to open additional locations across the USA. Telesat Communications Services offers round-the-clock customer service, network monitoring, technical support and delivery of news, sports and entertainment events for the television and Internet industries.

In December, Telesat gained full access to the US fixed satellite telecommunications market via its Anik E1 and E2 satellites when they became the first non-US satellites to be placed on the Federal Communications Commission's Permitted Space Station list - a designation that paves the way for US customers to use Telesat satellites for services liberalised under a World Trade Organisation (WTO) agreement.

TRW Wins Key Astrolink Gateway Contract

TRW has received a multimillion-dollar contract from Astrolink International LLC to develop a key ground-to-satellite interface for the Astrolink global broadband telecommunications system.

Astrolink satellites will provide bandwidth-on-demand Internet, multimedia and data network services to businesses and consumers beginning in 2003.

Under the contract, TRW will develop the space applications interface (SAI) system, consisting of software and hardware, which will provide the ground interface between the Astrolink network control centers (NCCs) and orbiting satellite payloads. TRW will also develop a payload emulator system, which allows testing of the ground-to-satellite interface before any satellites are launched.

TRW is also developing the digital processed payload for the satellites.

Operationally, the SAI system will function as an integral component of each of the Astrolink ground system's four regional NCCs, which are being built

by Telespazio SpA. The SAI system provides the interface for controlling and managing the Astrolink satellite payloads.

The Astrolink payload emulator will provide ground system developers with a means of verifying ground-to-payload interfaces before conducting on-orbit tests. Both the SAI and the emulator will play a key role in integrating and validating the entire Astrolink ground segment.

Surrey to Build RapidEye Minisatellite Constellation

RapidEye AG of Munich has announced an agreement with Surrey Satellite Technology Ltd to become the prime contractor and spacecraft platform supplier for the US$ 100 million RapidEye constellation of four advanced Earth Observation minisatellites.

The RapidEye Earth Observation system, to be launched in 2002, will provide 6.5m resolution wide-swath multispectral imaging with a daily revisit and is targeted primarily at agricultural applications. The 380 kg RapidEye minisatellites will use the SSTL minisatellite platform.

SSTL plans an equity investment in RapidEye.

RapidEye Inc is a new satellite-based GEO-information service company and concentrates on customers in the agricultural and cartographic segments.

L-3 Communications Receives Contract for an Advanced Satellite Communication System

L-3 Communications has announced that it has won a competitive award to develop an Advanced Extremely High Frequency Communications Security (COMSEC) and Transmission Security (TRANSEC) System, known as ACTS, for a new military satellite communication network by the Maryland Procurement Office. The initial contract value is US$ 28.7 million.

This award provides for the development of state-of-the-art space, ground and embeddable cryptographic equipment that supplies both COMSEC and TRANSEC for the new AEHF satellite system. The new system will replace the existing MILSTAR system that provides survivable, world-wide secure communications connectivity via satellite, and increased communication capacity and additional cryptographic algorithm capability over the predecessor system. This
system will also offer programming flexibility to adapt to future requirements.

L-3 Communication Systems-East will serve as the prime contractor for this program. L-3's Conic division will develop the Special Test Equipment for acceptance and depot testing of the ACTS equipment. Additional team members are Hughes Space and Communications Company of El Segundo, California and Mykotronx Inc of Torrance, California.

Boeing Teams With SpaceDev for Deep Space Missions

SpaceDev Inc and Boeing Space and Communications Group have announced that they have teamed together to investigate a variety of small, low-cost, commercial, deep-space mission to the Moon, Mars and near-Earth asteroids, involving micro-spacecraft of 250 kg mass.

SpaceDev has been refining the design of its commercial Near Earth Asteroid Prospector (NEAP) mission since 1997 and started offering commercial, fixed-price Mars probe-carrier and Moon orbiter missions with real-time streaming video last year. In November 1999 the company competitively won a contract from University of California, Berkeley to design, build, integrate, test and operate the CHIPSat astronomy micro-spacecraft, NASA's first University-Class Explorer (UNEX) mission to proceed into the implementation phase.

ESA's XMM X-Ray Observatory Takes First Pictures

The European Space Agency's X-ray space observatory has taken its very first pictures giving new views on the Universe. The commissioning images confirm that the XMM spacecraft, its X-ray telescopes and science instruments are functioning perfectly.

After a successful launch from Kourou on Ariane 504 on 10 December 1999, XMM was brought to its final operational orbit in the following week. The telescope doors on the X-ray Mirror Modules and on the Optical Monitor telescope were opened on 17/18 December. The Radiation Monitor was activated on 19 December and the spacecraft was put into a quiet mode over the Christmas and New Year period.

The mission's scientific data is being received, processed and dispatched to astronomers by the XMM Science Operations Centre in Villafranca. Operations with the spacecraft restarted there on 4 January when, as part of the commissioning phase, all the science payloads were switched on one after the other for initial verifications. By the week of 17 January functional tests had begun on the Optical Monitor, the EPIC pn, the two EPIC MOS and the two RGS instruments. The internal doors of the EPIC cameras were opened whilst keeping the camera filter wheels closed.

After a series of engineering exposures, all three EPIC cameras were used in turn, between 19-24 January, to take several views of two different

extragalactic regions of the Universe. These views, featuring a variety of extended and X-ray point sources, were chosen to demonstrate the full functioning of the observatory. The Optical Monitor also simultaneously viewed the same regions. One RGS spectrometer obtained its first spectra on 25 January; the other will be commissioned at the start of February.

First analyses confirm that the spacecraft is extremely stable, the XMM telescopes are focusing perfectly, and the EPIC cameras, Optical Monitor and RGS spectrometers are working exactly as expected. The Science Operations Centre infrastructure, processing and archiving the science data telemetry from the spacecraft, is also performing well.

The Calibration and Performance Verification phase for XMM's science instruments is to begin on 3 March, with routine science operations starting in June.

****

Mars Polar Lander Status

Mission managers for Mars Polar Lander report that radio scientists at Stanford University have not yet detected a signal from the spacecraft in data they collected last week. Stanford will continue to analyse the data and it is still possible that more detailed analysis might reveal a signal.

Additional radio telescopes around the world have offered their assistance in helping to confirm if the signal picked up by Stanford is from Polar Lander. The project has accepted offers of help from an array of fourteen 25 m antennas at Westerbork in The Netherlands as well as the 76 m antenna at Jodrell Bank, near Manchester, England and an array located near Bologna, Italy.

New commands were sent to the lander from NASA's Deep Space Network around the clock on Tuesday and Wednesday These commands told the spacecraft, if it is functioning, to reset its clock and send a signal to Earth. On Friday, windows were open for the antennas in The Netherlands, England and Stanford to begin listening. It will take each of the stations some time to review their data.

NEAR Prepares for Valentines Day Rendezvous With Eros Asteroid

The NEAR spacecraft has successfully performed a braking manoeuvre which has adjusted its approach speed and trajectory towards the asteroid.

In the manoeuvre, NEAR's medium-sized thrusters fired for 90 seconds, reducing the probe's closing speed from 69 km/hr to 29 km/hr.

The burn was originally scheduled for February 2nd but this was cancelled when NEAR went into "safe mode". Operators worked through the night to resent the spacecraft and programme two burns to replace the original one. The second part of the trajectory correction will take place on February 8th.

NEAR is on schedule to perform a fly by of Eros on February 13th to map the asteroid for minerals before entering orbit on February 14th.

ISS Service Module

Recriminations fly as the USA accuses the Russians of defaulting on commitments to launch the Zvezda service module by July. NASA is planning to launch its own service module in place of Zvezda. Meanwhile, the Russians are saying that Zvezda will now launch in June.

NASA is facing strong criticism from Republican politicians that it has lost control of the US$ 60 billion International Space Station project. ISS faces further delays and yet another spiral of costs. NASA, on its part, is getting increasingly critical of the Russian's performance and lack of commitment.

Russia, on the other hand, gives every appearance of being more interested in its own ageing space station, Mir, than in the ISS. Launchers and facilities originally earmarked for the ISS are now, reportedly, being diverted to help service a plan to re-establish a manned presence on Mir for commercial ventures. NASA hoped that the Russian's would abandon Mir, freeing up Russia's now limited resources for use on the ISS, but Russia has proved extremely reluctant to give up the independence offered by Mir.

It is ironic that the 14 year old Mir space station, with its failing, out of date equipment, cramped conditions and quarters which looks more like a submarine than a spacecraft is finally attracting commercial investment. The ultra high tech ISS, on the other hand, has difficulty attracting any commercial interest whatsoever.

In response to Russia's attempt to continue operating Mir, NASA has suspended negotiations to buy a further US$ 100 million of hardware and services from the Russian Space Agency.

Zvezda has been delayed by about two years and is suffering further delays because the launch vehicle which will lift it to orbit is currently grounded following manufacturing problems which caused two consecutive launch failures. Delays are not, however, the sole preserve of the Russians. The US built main laboratory module is running about 18 months late. Looking back even further into history, when work started on the station nearly two decades ago (and long before the Russians were ever involved) it was intended that the space station would be operational in the early nineties.

NASA has a contingency plan for an additional shuttle mission, using Atlantis, in April to increase the altitude of the fledgling ISS which currently consists of the mated Unity and Zarya modules. This will keep the station in orbit until at least the end of the year.

NASA is also preparing to launch an "Interim Control Module" in December if Russia does not launch Zvezda as it has agreed. The US$ 210 million Interim Control Module (hardware plus launch cost) will not provide the living quarters that Zvezda would, but would provide life support to the ISS to make it habitable. If Zvezda is launched this summer, the launch of the ICM would be delayed until possibly February 2001. Furthermore, NASA also intends to launch a separate US$ 100 million propulsion module that can boost the station into a higher orbit.

****

Mir Reawakens

Following six months of hibernation, Russia's Mir space station has been reawakened by controllers at the Mission Control Centre near Moscow.

Ground controllers have powered up Mir's control computer and gyros. Thrusters have been fired to stop the station spinning and the solar arrays have been oriented towards the sun. A Progress supply ship which was docked with the station was commanded to fire its booster, pushing the station into a higher, more stable orbit.

Crew are expected to return to Mir following the March 1st launch of Soyuz TM-30 from Baikonur, Kazakhstan. They will board Mir some 50 hours after launch and will stay for at least 45 days. The cosmonauts on this return mission will be:

Sergey Zalyotin, mission commander, 38 years old, Russian Air Force pilot
Aleksandr Kaleri, flight engineer, 43 years old

One of the main tasks during the mission will be to locate and fix an air leak through which about one percent of Mir's air is seeping each week. The recently launched Progress supply ship carried a supply of air to boost the internal air pressure and to act as a reserve for a few months until the leek is sealed.

Other tasks will include maintenance, repairs, evaluating the condition of the hull, operating scientific experiments and photographing the Earth's surface. Several space walks may also be scheduled to assemble test equipment and to perform exterior maintenance.

Aerojet Engine for Japanese Orbiter

Aerojet has successfully completed verification testing of its HOPE-X Orbital Manoeuvring Engine (OME), qualifying it for operation as the main propulsion for the Japanese National Space Development Agency's HOPE-X vehicle.

The HOPE-X vehicle is a prototype unmanned shuttle to be launched by Japan's HIIA launch vehicle. Aerojet is developing the HOPE-X OME for

Ishikawajima-Harima Heavy Industries Company, the shuttle's propulsion system contractor.

The reusable HOPE-X OME is a 4,000-pound-force thrust class engine that is pressure-fed, regeneratively cooled and operated with storable propellants. It is much like the space shuttle Orbital Manoeuvring System, also designed and built by Aerojet.

The test engine will be refurbished and delivered to the customer as a flight spare in addition to the two new flight engines which are now ready for acceptance testing and delivery later this year.

****

Ariane to Launch iSKY

The first two iSKY satellites will be launched by Arianespace in the third quarter of 2001 and in mid 2002. iSKY-1 will be launched on either an Ariane 4 or Ariane 5 launch vehicle.

Arianespace Finance will also provide iSKY more than US$ 100 million of construction period and long-term financing.

****

Eutelsat W4 to Launch on Atlas 3

International Launch Services (ILS) has signed a contract with Eutelsat to launch the Eutelsat W4 communications satellite on the first Atlas 3 rocket.

The launch is scheduled in late March/early April from Cape Canaveral Air Station, Florida, USA.

Eutelsat W4 is a geostationary satellite which will be located at 36° W. It has 31 Ku-band transponders which will provide capacity for consumer digital broadcasting services in Russia and for pay-TV, telecommunications and IP (Internet protocol)-based services in sub-Saharan Africa. W4 is manufactured by Alcatel Space.

****

PanAmSat Opts for Sea Launch

PanAmSat selects Sea Launch for deployment of Galaxy IIIC satellite in 2001. The agreement with Sea Launch provides PanAmSat with an option for four additional launches.

The agreement calls for the launch of Galaxy IIIC during the second quarter of 2001 and provides PanAmSat with the option for four additional Sea Launch missions through 2003.

Sea Launch employs a modified Zenit rocket and lifts off from a floating launch platform that is positioned along the equator in the Pacific Ocean. PanAmSat's first Sea Launch mission will deploy the PAS-9 satellite during the second quarter of 2000. PAS-9, an HS 601 HP spacecraft built by Hughes

Space and Communications, will provide video and telecommunications services throughout the Atlantic Ocean Region from its orbital location of 58° W. The satellite contains 24 C-band and 24 Ku-band transponders.

Galaxy IIIC, an HS 702 model spacecraft also built by Hughes Space and Communications, contains 24 C-band and 52 Ku-band transponders, and will provide video, Internet and telecommunications services throughout the United States and Latin America from its orbital location of 95° W.

LAUNCHES

****

Progress M1-1

Launched: 1 February 2000
Site: Baikonour Cosmodrome, Kazakhstan
Launcher: SL-04
Orbit: LEO, inclination 51.64°, perigee 192.8 km, apogee 238.8 km
International Number: 2000-005A
Name: Progress M1-1

Progress M1-1 is a cargo ship intended to resupply the Mir space station prior to the return of cosmonauts to Mir at the end of March. Docking with Mir occurred on February 3.

****

Kosmos 2369

Launched: 3 February 2000
Site: Baikonour Cosmodrome, Kazakhstan
Launcher: Zenit 2
Orbit: LEO, inclination 71.0°, perigee 830 km, apogee 840 km
International Number: 2000-006A
Name: Kosmos 2369

Kosmos 2369 is a military satellite reported to be used for ELINT.

****

Hispasat 1C

Launched: 4 February 2000
Site: Cape Canaveral Air Station, Florida, USA
Launcher: Atlas IIAS
Orbit: Geostationary 30° W
International Number: 2000-007A
Name: Hispasat 1C
Owner: Hispasat
Contractor: Alcatel Space

Hispasat 1C is a geostationary communications satellite based on Alcatel Space's Spacebus 3000B2 platform.

****

Launch Schedule

February 8: Globalstar (4 satellites) on a Delta 2 from Cape Canaveral Air Station, Florida
February 8: Astro-E on an M-5 from Kagoshima Space Center, Japan
February 8: Russian military satellite on a Soyuz from Baikonur, Kazakhstan (also test of Fregat upper stage)
February 11: Shuttle Radar Topography Mission on space shuttle Endeavour (STS-99) from the Kennedy Space Center, Florida
February 12: ACeS Garuda 1 on a Proton K/Block DM from Baikonur, Kazakhstan
February 16: Superbird 4 on an Ariane from Kourou, French Guiana
February 20: MTI on a Taurus from Vandenberg Air Force Base, California
February 21: DSP Payload on a Titan 4B from Cape Canaveral Air Station, Florida
February 24: EROS on a Start-1 from Plesetsk, Russia
February 28: ICO F1 on a Sea Launch Zenit 3SI from the Odyssey platform, equatorial Pacific Ocean
February 29: Ekspress A2 on a Proton from Baikonur, Kazakhstan
March 2: IMAGE on a Delta 2 from Vandenberg Air Force Base, California
March 14: AsiaStar and Insat 3B on an Ariane 5 from Kourou, French Guiana
Early April: Galaxy 4R on an Ariane 42L from Kourou, French Guiana
Early May: PAS-1R on an Ariane 44L from Kourou, French Guiana
May: Echostar 6 on an Atlas
Late May: Astra 2B and GE-7 on an Ariane 5 from Kourou, French Guiana
Mid June: Brasilsat B4 and Nilesat 102 on an Ariane 44LP from Kourou, French Guiana
Late June: Ekspress A3 on a Proton from Baikonur, Kazakhstan
Early July: NSS-6 (provisional) on an Ariane 42L from Kourou, French Guiana
July: Zvezda Service Module (ISS flight 1R) on a Proton from Baikonur, Kazakhstan
Late July: Eurasiasat 1 and L-Star 1 on an Ariane 5 from Kourou, French Guiana
August: Tempo 1 on an Atlas

Delayed: High Energy Transient Explorer (HETE-2) on a Pegasus XL from Kwajalein Missile Range, Pacific Ocean

Andrew and Channel Master Alliance

Andrew Corporation and Channel Master LLC have announced an alliance, enabling each company to offer a broader range of earth station antenna products.

Channel Master specialises in the design and production of an extensive assortment of antennas and accessories with antenna sizes ranging from 0.35 m to 3.0 m. Andrew has a full line of fixed and motorised earth station antennas ranging from 1.2 m to 9.3 m. This alliance will enable both companies to immediately extend their product lines and better provide for the diverse requirements of all customers.

****

Globalstar Closes Stock Offering
Globalstar Telecommunications Limited has announced that it has closed the offering of 8,050,000 shares of Globalstar common stock which included the full exercise of the over-allotment option of 1,050,000 shares.

The purchase price was US$ 35.00, yielding net proceeds of approximately US$ 268.5 million.

Globalstar management believes it already has the resources necessary to complete the deployment of its global mobile telephone system. Accordingly, the company will use the proceeds of the offering for general corporate purposes which may include accelerating the roll-out of service beyond planned efforts through increased support of service provider marketing activities and the funding of promotional discounts; the development of new service features; or potential repayment of debt.

****

Sirius Gets DaimlerChrysler Investment

DaimlerChrysler and Sirius Satellite Radio have announced an agreement to bring satellite radio to DaimlerChrysler customers in the US beginning next year. DaimlerChrysler Corporation will purchase US$ 100 million of Sirius common stock and exclusively factory-install Sirius receivers in DaimlerChrysler cars and light trucks.

The arrangement includes all DaimlerChrysler brands sold in the United States, including Mercedes-Benz, Chrysler, Jeep, Dodge, Dodge Truck, as well as Freightliner and Sterling heavy trucks.

DaimlerChrysler and Sirius will also work together to develop telematics functions using the Sirius national digital broadcasting system. These applications may include a range of wireless security, convenience and navigation services for DaimlerChrysler vehicle owners.

****

Terayon Acquires ComBox

Terayon acquires ComBox for European cable data access and broadband satellite systems.

Terayon, a leading supplier of broadband network systems, plans to acquire Combox, a manufacturer of broadband data systems and satellite communications based on international standards. The addition of ComBox' cable data systems based on the Digital Video Broadcasting (DVB) standard

further expands Terayon's broadband portfolio to include systems based on all the major emerging international standards.

ComBox' innovative cable data access systems conform to the growing EuroModem international specification, based on the Digital Video Broadcasting (DVB) standard. ComBox' cable data system includes both headend transmission and customer premise equipment, as well as a cost-efficient internal PC cable modem card. ComBox' advanced and highly integrated data-over-satellite system is an end-to-end solution, enabling satellite operators to offer high-speed Internet access, data distribution, and IP multicasting to residential, SOHO (Small Office/Home Office) and corporate users.

Under terms of the agreement, 775,000 shares of Terayon common stock will be exchanged for all outstanding securities of ComBox. The acquisition will be accounted for as a purchase and is expected to close in the second quarter of Terayon's fiscal year 2000. This acquisition has been approved by Terayon's board of directors and is subject to various closing conditions.

****

ACT Networks Introduces SkyPerformer

ACT Networks introduces SkyPerformer VSAT integrated access solution for transmitting packetised voice, fax and data traffic over VSAT and hybrid terrestrial/satellite networks.

SkyPerformer operates over public and private VSAT networks and is suitable for multi-site enterprise networking or for extending carrier service offerings to areas where outside plant infrastructure is poor or non-existent.

ACT's Multiple Addresses Per Carrier technology (MAPC) uses a single satellite frequency to broadcast to multiple remote locations. The receiving earth stations can either accept or refuse information based on pre-configured addressing policies. SkyPerformer can also combine IP or Frame Relay switching and filtering over a single satellite frequency to substantially reduce hardware capital costs and recurring charges for space segments.

By supporting a variety of satellite network topologies, including single or distributed star, partially or fully meshed and point-to-point, SkyPerformer can be deployed with satellite modems from any major equipment manufacturer. SkyPerformer eliminates the requirement for expensive hubs or demand assigned multiple access (DAMA) controllers and provides toll-quality 8Kbps voice compression with dynamic fallback to 6Kbps in congestion situations.

Monaco-based VSAT operator and system integrator SONEMA recently built a SkyPerformer network for military troops stationed in Kosovo. The integrated voice and data service supports a combination of prepaid long-distance

calling cards and toll-free 800 numbers over both satellite and terrestrial network segments.

****

Chello Broadband Expands into Australiasia

Chello Broadband, Europe's leading provider of broadband internet services to residential subscribers, has announced its expansion into Australia and New Zealand.

In preparation for broadband service in Australia, a full-scale commercial trial of broadband internet access has been introduced by Austar United Communications, with the full Chello service following in the first half of this year. Chello is also launching its service in New Zealand, in association with Saturn Communications Ltd. Delivery in Australia will be via satellite, whilst in New Zealand cable will be used.

In both countries, subscribers will have access to a range of top-quality multimedia channels including news, entertainment, communications, and interactive games through their PCs. Customers can access email and e-commerce solutions via a broadband subscriber portal. Both the Australian and New Zealand subscriber portals will contain local content.

****

Seven Seas Introduces Mobile Satellite ISDN Service

Seven Seas Communications is one of the first suppliers to offer Inmarsat's Mini-Phone ISDN service which utilises Inmarsat's spot beam satellites to provide global coverage for voice, fax and high-speed data communications.

E-mail, web access, video conferencing, image transfer and multimedia along with voice and fax capabilities are delivered through a laptop-sized satellite telephone weighing only 4 kb and equipped with a foldout antenna that fits into an ordinary briefcase. Satellite phones are manufactured by Nera are available immediately and more configurations will be available soon.

"We expect companies and individuals involved in natural resources, media and corporate travel to be very excited about the availability of portable high-speed data," said Jacks Sterenfeld, director of new markets for Seven Seas. Those industries have historically had the need to move large amounts of data from remote locations without the benefit of a strong local landline infrastructure in many cases.

Seven Seas Communications is a leading provider of satellite services to the natural resources, media, fishing and
yachting industries throughout the world.

****

SierraCom Introduces an INSAT C-Band VSAT Transceiver

SierraCom has launched a C-Band VSAT transceiver designed to meet the needs of the Indian National Satellite System (INSAT).

"The INSAT C-Band transceiver was developed to address the rapidly growing needs of the satellite communications market in India," said Bob Ranslow, Vice President of Satellite Marketing. "1999 marked the second consecutive year of triple digit growth for SierraCom's VSAT product line," continued Ranslow.

SierraCom's INSAT transceiver operates in the 6.725 to 7.025 GHz range, as opposed to the traditional VSAT C-Band range of 5.85 to 6.425 GHz.

SierraCom's VSAT product line includes both indoor and outdoor units for C-Band and Ku-Band frequencies, with C-Band units available up to 60 watts, and Ku-Band units available up to 40 watts. SierraCom also offers an optional kit for 1:1 redundancy. SierraCom VSAT units are CE approved and meet several satellite ground terminal standards including Orion, Eutelsat, Intelsat, ETSI and BZT.

****

Teleglobe's Digital Transatlantic Broadcast Service

Teleglobe has partnered with Eutelsat to deliver North American news, sports and entertainment content to 18 countries throughout Europe and North Africa.

Teleglobe's new Ku-band Occasional Use platform expands the company's portfolio of worldwide fibre and satellite broadcast services, making broadcast content from North America available to 18 countries throughout Europe and North Africa.

News, sports and entertainment feeds will be carried over Teleglobe's ATM network from Los Angeles, New York, Washington and Toronto to be delivered to European destinations over Eutelsat II-F2 from Teleglobe's Des Laurentides 11 m dedicated earth station. The service may also be offered from Europe to North America on the reverse link.

Because the service transmits over Ku-band, rooftop dishes as small as 1.5 m in diameter can receive transmissions. The video signal will be formatted in the MPEG-2 4:2:2 standard, streaming over an 8 Mbps digital channel.

European cities covered by the service include Amsterdam, Berlin, Bratislava, Brussels, Dublin, Geneva, Lisbon, London, Luxembourg, Madrid, Munich, Paris, Prague, Rome, Vienna and Warsaw. North African cities include Algiers, Rabat and Tunis.

Service is scheduled to commence mid-February 2000.

****

Three New Satellite-IP Services from InterPacket

InterPacket has announced three new value-added products and services: Voice Over IP (VoIP), BIZkit and Colocation.

The new portfolio of applications will include:

Voice Over IP (VoIP): Enables ISPs to sell carrier-grade international long-distance service over their existing InterPacket connection. InterPacket offers two types of VoIP solutions: Voice Business enables ISPs to provide service to corporations u sing the customer s existing PBX and dedicated IP connection; and Voice Dial enables carriers to offer consumers service using prepaid calling cards and dial-up access via local or toll-free numbers.

BIZkit: Enables ISPs to provide their corporate customers with a high-speed downlink directly from U.S. and European Internet backbones, augmenting capacity for high-bandwidth Web applications and streaming media. End-user companies continue to get their upstream bandwidth through the ISP s InterPacket connection. The kit includes all end-user electronics, including a compact satellite antenna. The ISP can offer technical support back up from InterPacket.

Colocation: Provides ISPs with a dedicated server connected directly to the US Internet backbone, which they can use both to improve access to their own content and to offer Web hosting services to their customers. InterPacket offers standardised servers that it builds, configures and connects via multiple redundant OC-3s to the Internet backbone. ISPs own the servers and pay only for the bandwidth they consume.

InterPacket has completed separate agreements with leading Internet backbone suppliers Exodus Communications Inc and AboveNet Communications Inc. Under these agreements, both suppliers will provide the InterPacket network with backbone connectivity and facilities for its core routers and switches. In addition, the companies will partner in offering co-location to InterPacket s customer base.

The source and binary are available as part of the Debian LINUX 'potato' distribution. These are both available via http://www.debian.org and source is also available via http://www.amsat.org (although the Y2K code there had a minor bug at one point). Also available for Debian LINUX is the 'predict' program, also available as both source and binary via the same site.

73's and good luck.

Why take an extra when all your connections are available using the general class. CB operators make friends on their frequencies and those with General Class certification really do not have to or do not want any higher rating because what they have meets their needs. Very simple. Its like a BS degree, if this meets your needs why get a Masters. IF a masters meets your needs they upgrade to a Ph.D The pay is not greater! It all depends on the needs of the person or individual.

The Advanced license give you only slightly greater operating privileges.
It just is not worth the effort.

The network bandwidth sky is not falling. I'll bet your complaints
about my Verisign signature (since removed for news, sorry about it in
the first place) have now consumed much more bandwidth anyway.

Apparently folks in the .uk domain have archaic network access at a
great deal of expense - I'm sorry to hear about it. I can relate -
I don't get DSL where I live, I have to be content with ISDN.

As for end-users paying more, well, yeah, that's inevitable, but that's
not about ham-radio.

But that is not the current version. It is version 3.

Hi all,
Can anyone update me on the status of the russian 2 up / 10 down sats ?
Are they still going ?
Is there a web site / program to calculate passes etc ?

Im thinking of it as a project for a scout amateur radio group and as we have no UHF kit it would seem like the low tech approach of the RS series might fit in well.

Many Thanks

Doug Noble GM0DJN

Possibly my complaints did, but if I had not you'd still be using it and
taking up more and more bandwidth. Thank you for removing it.

Not so much .uk domain as the UK and many other countries, where we have
to pay for local calls (maybe our service rental is less, but I have not
compared). We are getting ADSL, but it's far from cheep!

Actually it is considerable. It is the amount of band space from
advanced to extra (175KHz total) which is negligible.

General to advanced almost doubles the HF space on the non WARC HF bands

Try www.amsat.org for the current info and they also have files there to download and the Kep data to use the programs.

480. How much power?

Newsgroup: rec.radio.amateur.space
Date: 2000-02-08 00:00:00 UTC
From: Tim Goldenburg <tim@moneystar.com>
Message-ID: <87perq$90b$1@news.jump.net>
Source record: 10214

How much power does it take to communicate with a satellite? 35 W, 50 W, 100 W? I'm new to amateur radio, and am very interested in the satellite and packet aspects. However, I don't want to spend too much money on a base station. Would it be possible for a Kenwood TH-D700A to communicate with a few satellites with a vertical 2m/70cm antennae? From what I understand, the D700A can receive and transmit on two different frequencies which is conducive to satellite work. But, is it enough power to get me started? Thanks.

Radio Meteor Observation Bulletin No. 78 February 2000

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: Biedenkopf C2 TV, Video Frequency 48.250 MHz,
ERP 100 kW, Azimut 90 +/-65
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Note:
* local C2 interference or propagation opening
I am working now with some university students to develop a stable software using Global MS Network, similar to MCT5.
This software has been written to run in a PC under MS-Dos, Win 3.x or Win 9x (not recommended), with a CGA display, video card or better.
The program is based on the reading of the PARALLEL port, connected to a hardware which connects Pin 12 and 23 when a reflection occurred and disconnect when the reflection ends. The program counts number of seconds that the pins are connected.
The program shows through display BIOS date and time, remaining time to save data, number of meteors counted in last 10 minutes, a menu and duration of a meteor.
Data are saved to a text file (dd#mm#yy.min) on hard disk, every 10 minutes, creating a new file every day. File could be read from any text editor.
The structure of the file is:
Date | Hour_init | Hourr_end | Num_Meteor | Sec_Max_duration

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.24 MHz
Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: CW
Recording method: listening by ear

January 2000

Number of meteors heard in one hour interval

```

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 1 hour

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
BReceiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
BInterference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
B a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. good Quadrantids activity on Jan 4
. one or more transmitters have ceased broadcasting since early 2000.
The counts are considerably lower, and therefore interference has
a bigger impact.

Pierre De Groote

Observer: R.B. Minton
Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna: Comet made 50MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is
received by a low frequency filter (880 Hz)and fed into
the D/A converter and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with /8 second sampling interval to store the> 1.0 s reflections.

Note
The time of the peak of the Quadrantids was interesting this year.
The normal +6 h shift from previous years to 2000 is not quite correct this year?

Ilkka Yrjola

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio Bmeteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

Which satellite? What mode? How reliably?

Most of the satellites have sensitive uplink receivers and
they can hear you just fine. It's usually more of a challenge
to make sure that you can hear them.

FWIW: at school I was working the 1200 and 9600 baud digital
satellites, horizon to horizon, with about 100 watts ERP. 20 watts
out of the 736, 3 dB feedline loss, 10 dB gain antenna.

While stories abound of people hitting AO-27 with 1 watt from
a handheld - possible in theory, and occasionally possible in
practice - more reliable communication requires a bit more.
But not that much more. Experiment!

AMSAT (http://www.amsat.org) publish reams of stuff. Why not
have a look?

I think 5W should be pleanty for most. I have used AO27 and if you hit it with more than like 10W it shuts down. AO27 was designed to be worked with a HT. You can get a hand-held beam antenna for your HT which will help.

Actually, the General-to-Advanced increment gives you much more addition
spectrum for the effort than Advanced-to-Extra does. If you like to
work 75m DX in the "window" (3,790 - 3,800 kHz), you need the Advanced
rating.

Top 10 List.

1.) Let it expire.

2.) Give it to a retard, they're gonna your spectrum anyway.

3.) Send it to the FCC & tell them to shove it.

4.) Get VE accredited and help license CBers.

5.) Send it to the ARRL & tell them "Thanks for Nothing"

6.) Listen to retards talking in your spectrum.

7.) Modify CB's for your new ham friends & test their echo Mics.

8.) Brush up on your 10-codes.

9.) Teach new hams how to make a dipole and turn on a soldering gun.

10.) Place it in the toilet Bowl... then flush, a CBer will find it.

I plan to get back into ATV and want to know if anyone is using
what was called back in the 80's a "J-Beam" antenna. It was made by
Spectrum International and the model number was "88".

I own one of these and trying to remember how to put it back together.
Before I install it I was wondering if anyone might still have the
single page instruction sheet that came with it and if I could get a
copy of it.

I also would like to know what other ATV people are using and if I
should stick with this antenna or go with something else.

thanks,

Hi Tim,
It really depends on the satellite (ie. What frequency, what orbit, etc). I have worked MIR on AX.25 with 1 W into a dipole on a good pass, on HF RS13 can be worked with 5-10 watts. RS13 may be a good satellite to start on ...
Cheers
Andrew

Too bad you cant be forward thinking like some of the others ive seen...the hobby of ham radio is DYING pure and simple...the enticement of the no code license for techs did not pull in people by the droves it was expected to. However now with upper class licenses easier to get and the ability to talk all over the world hopefully that will draw em in. Heck even the military had enough forsight to eliminate CW from its operations. Cw has its place for sure and i fault no one for their opinions on it but its past the time when high code proficiency should be a factor for obtaining a higher class license.

Well, I think it's more: **** "Anybody stupid enough to join me?"****

If you don't like what's happened, why not work within the system to make sure the standards are upheld and what better way than by continuing to serve as a VE?

Besides the multiple-guess exams that have been the norm for so long are a joke anyway. New exams might actually be better exams but anything that's multiple-guess is a joke!

And you can't accuse me of being a newly licensed individual who is anti-CW. Yes, I must admit I went two weekends ago and passed element 4B with one wrong so I can turn it in after April 14 to upgrade to Extra. However I could, just after I upgraded from Novice, copy 25 wpm but needed a typewriter to be able to get a minute or two down on paper with no errors. I never really enjoyed CW that much but did operate 40 and 15 meters as a Novice which is a good way to build one's speed. By the time Extra existed I had been not using CW for so long that my speed stuck around 10 wpm and goes up to 15 wpm when I use CW for a few hours a day for a week. I upgraded to Advanced many years ago before the exam was a "fill in the blanks" exam.

I was licensed nearly 10 years BEFORE YOU WERE EVEN BORN! And some think it's us "old f*%#s who are against recognizing that times change and we have to adapt to them or the world will pass us by. I guess YOU are the one being passed by and you're no older than my daughter!

Get with the times and live in the real world rather than what you wish the world would be!

And yes, I choose NOT to post my identity. LIVE WITH IT - I get tired of flames not posted for the whole world to see and SPAM.

512. Code, what's big deal.

Newsgroup: rec.radio.amateur.space
Date: 2000-02-14 00:00:00 UTC
From: Tate Jackson <tatejackson@mindspring.com>
Message-ID: <88ahq2cua2@nntp5.atl.mindspring.net>
Source record: 10246

I'm just not getting it. What is the big deal about the code? I entered the hobby as a tech plus. The code has done nothing for me since I passed the test.

I would like to know what eliminating the code will do to the hobby. DX will still there, QRP will still there, The SATs will still there. SSB, RTTY, ATV, SSTV, Packet will all still here. What have we lost by loosing the code.

I've built 4 radios and I am working on another one (Ramsey 20 meter Multimode kit). When I'm done with this, I'm going after the North Country ATV kits. I like building radios. Its why I got into the hobby. I didn't use the code for any of this. But what the heck, maybe I should build a cw QRP kit just to see what all the fuss is about.

To all you hams who are complaining about the "easy " code requirements coming in April, why don't you help the rest of us out. Share all that great knowledge you have. Teach a lic. class. Elmer just a few of us who want to learn about radio. Write some books that teach us to be better hams.

If you really think the quality of ham radio is going down the tubes, don't leave, do something about it.

What's your problem? The Novice written exam is being merged with the Tech exam so now it will actually be harder to get a beginner's ticket" then it was under the old system !! As for the code, if somebody wants to 'go fast' they'll learn it on their own because they like doing it. The 5 wpm code requirement is there because of international treaty obligations and the fact that if everything else breaks you can still communicate with somebody world wide with Morse Code. You don't have to be a speed demon to do that.

Thank you for your service as a VE. What you did was and is important and luckily there will be somebody to take your place.

73 Bill

Hi
snickers Wanna give up your station too while you're at it? I know some guys that would love to get into the ham thing who can build a hell of a radio antenna or even work on a radio and do it right but stumble on the code and if you gonna throw in the towel because they want a chance to learn cw and ssb ops at a modern pace for todays world then by all means leave the equipment too when you give that last test score to whoever takes it .I say that because of this... with the new requirement you are not willing to let people in because they don't conform to your standards so why be a ham when they show up regardless of your views? :) Or do we prefer to be elitist tonight ?
Just a thought
Chris

Vince...

Don't let the extinct morse code keyer hit you in the rear on the way
out!

I doubt you'll get much sympathy on this in a scanner group.

These new rules are a breath of fresh air. Now, if we could eliminate
code altogether, I would gladly visit the old keyers in a musem ,
where they belong.

I must admit that I got really PO'd at the League when they appeared to get behind incentive and refused membership for about 20 years. I discovered they didn't care and I missed out on a pretty decent magazine.

Now to the real problem...I am sure you actually believe that the Code makes us better hams. If that's true then I support your stand. But, I can't help thinking that you are just too set in your ways and refuse to roll with the punches.

Listen Bucky...the stupid Morse is finished and I say good riddance. By the way I was trained in the military and can still send and receive in excess of 35 WPM, I can often be found sneaking around the CW sub bands working really exotic DX... without the usual pileups and DX net BS that you find in SSB.

Haven't you begun to realize that the new crop of low code Hams will have no interest in our CW sub bands and they will leave us to work all the really cool DX without the usual QRM that you find on SSB. Think this thing through and you will realize that the "real hams" (defined as those who know CW) will have exactly what they want...an exclusive window without interference. Think back when hams had calls like 7ADL and you could hear the whirring noise of the rotary spark gap transmitters...nice, big bandwidth, no interference...when real hams made their own equipment. I wonder what those guys would say about your rice box...not a real ham is he?

Now, when we die off and the CW sub bands go into disuse, the FCC will reallocate the CW to something else. Meanwhile, you and I will be trying to communicate with the living by tapping out Morse on the nearest cloud. Gee, I hope my granddaughter can copy CW.

Sam, K2LDK

It doesnt take "guts" to CUT AND RUN Vince!
Maybe your dodging an investigation.
Seems to me that your volunteer service
would be needed more than before.
Bottom line, if you would regroup, retract
your decision, continue your service, and announce
it on this forum, then sir, that would be "guts" and
you would be respected by many of your critics.
What ever your course, thank you for your
contribution.

Take this for what it's worth Vince (KB7ADL) I am a veteran Submarine Radioman with plenty of code background. The hobby is changing, I think we sometimes have to take 1 step back to take a few forward. And if this is what we have to do to keep the bands we have, from losing them to leo's , or any other entity that has outgrown their pants like the Federal Government. I think it is a little sacrifice we have to make. I under stand some of your feelings. Your services as a VE Will be missed, and your QSO's. We all have our opinions on the subject I am sure, but we radio guys need to stick together. Or the Washington politicians will police us to death. I Respect your views and the views of the "New Blood" and welcome both of you into any QSO. Hope to "Shoot the Bull" with all of you one day. Lets stay united, not divided. We cannot be touched united, but easily shot down in washington by some pencil pusher if we get divided this easily. Please stick around, how will we know what the past was like and keep a little of the old with the new If you leave.
Happy Hamming. And hope to Catch all of my fellow hams on frequency one day!

>Radioman with plenty of code background.

Why'd you remain a Tech, John? You could have easily made General with
that code background...

>The hobby is changing, I think we
>sometimes have to take 1 step back to take a few forward. And if this is
>what we have to do to keep the bands we have, from losing them to leo's , or
>any other entity that has outgrown their pants like the Federal Government.

You're chanting the Tech's mantra: "Code needs to be done away with in
order to save our bands," yet the only bands which are in danger have had
code-free access for almost a decade now. M/HF is not in any danger of
being auctioned. You can't name one entity which has made a bid on our
M/HF spectrum.

In '79 we were given three new HF bands, and proposals exist at this
moment to provide us with even more.

73, Jeff KH6O

I hope this won't really be looked at as SPAM. I just want to let you microwavers out there know about the box of misc. microwave parts and units I have up for sale on eBay.

I have 2 working 10GHz units and many parts for sale in a sort of parts box.

If you are interested, stop by. I want to move these things out of the shack as there seems to be little interest in uWaves here in Central Ohio.

Thanks,
KB8JNE

I guess since Vince will be turning in his VE accreditation, I will
go and get VE accreditation after April 15th when I get my 'Extra".
There will be some of us that will try to preserve amateur radio.
Don't feel that the 20 wpm is a show stopper. I do feel that the
FCC should have set it to at least 10 wpm for Extra but that is
water under the bridge and now we all need to ge 'along'.

Ham radio is only as good as you make it. Doing what you are doing
is not helping amateur radio.

Maybe he's afraid that they'll make him TAKE one.

Hmmmm . . .this is a good idea. Maybe we should require proof of
current 20 WPM code skill before we let anyone whine about
restructuring.

How about it, Vince? Care to provide the date of your last successful
20 WPM exam?

I'll bet you Euro guys ARE getting pretty tired of this. I will try to remember to trim my headers.

But before I do, just what is the general consensus over there about this whole thing? Are the complainers justified, or are they just whining?

I know that you have different requirements for licensing, so it would be nice to get an entirely neutral point of view.

Hey Vince,

Don't let the door hit you in the ass on the way out.
You'll rethink your position when you see Ham Radio come
alive again. The sales of rigs will be going up, and when sales
increases manufacturing increase and prices will drop.

Dropping the code is the BEST thing to happen to our
hobby.

Oh yeah, I didn't give up my P.E. license when the slide rule
went the way of the dodo after the HP35 came out. I just take pride
in knowing that I entered the field when number crunching wasn't as
easy as pushing buttons ... AND .... I don't think any less of my
younger peers because they had programable calculators.

Your logic is fuzzy.

I'm with you.

Its refreshing to see someone with principle standing up for what they
believe is right. The Arrl leadership has turned into a bunch of
limp-wristed liberals catering to low-life. If the think these new
"Cracker Jack box licensees" are going to care enough about the hobby to
become members, then their really foolish.

SAVE HAM RADIO!

WOW What a thread!

I have sat here and read every post and am still laughing in my head over some of them. Some of you have come up with some really creative ideas and that is great!!! That is what this NG stuff is all about. I am glad to see it still works. I personally am newly licensed in Amateur Radio, but have been around it for about 15 years. I however am not new to the internet and it is great to see these long threads where although we had some negative ones most of them were positive ideas for Vince.

I have to agree with many of you on the restructuring of the Ham License. Shit happen, times change, deal with it, and move forward in your life sir. You are almost 37 years old and acting like a child. What's next, going to your room and throwing a temper tantrum? I really think you need to reevaluate your priorities in life.

Keep up the great threads.

Well, you couldn't put anything in a modern car from Ace.
Pollution standards are way to stringent. Briggs&Stratton
just wouldn't do. Looks like they are about to release
those hybrid hydrogen engines this year. We'll get more
MPG out of a gallon of gas than ever dreamed of
and pollution free. Times they are a changin'

>Oh boy,another "liberal" BS guy yammering about this CW nonsense!The
ARRL -FINALLY- woke up and saw that CW isn't what it used to be,about
50 years too late,and that their(ARRL'S)"great experiment"-incentive
licensing,has been a total disaster.Even they admit what was wrong with
it,taking priviliges away (from the Generals)is always a mistake!The
incentive change in 1967(?)directly caused a huge number of ham stores
to go out of business.Look at a CQ or QST from before,and a year or two
after,about half the stores are gone!Yeah,maybe the ARRL wants to sell
radios and books,but there has to be hams to buy them!I wouldn't mind
them making the written test a lot harder than it is and will be,BUT,
make CW just a part of the exam that can be FLUNKED,and you can still
pass the test if you ace the rest of it.
If there are no NEW hams,then there won't be ENOUGH hams later on,
and if there aren't enough,there goes spectrum.......

If the FCC changes the passing score on written exams to 90% I'll keep my badge and rejoin the ARRL. Otherwise I'll just be an elmer, fighting corruption, rule violations, and restructured newbies using CB Lingo on the bands.

I wonder if you have any brains. Lighten up man. This discussion is no more relevant here than it would be in rec.pets.cats.rescue. Why don't you post it there?

I'm getting sick and tired of those stupid Americans who cannot stop to think that their licensing scheme and the dying CW mode are such an important topic that they need to be discussed in any group that somewhere has radio.amateur in its name. That is not how Usenet was meant to be used, and the topic is not important enough to warrant an exception.

Sure your licensing scheme is 30 years behind, and fine that it has to be reformed, but please discuss that IN AN APPROPRIATE GROUP. Not in a group where satellite enthousiasts from all over the world try to communicate. We already have enough noise to fight.

Vince:
We respect you for once having gotten the "Extra", and passing 20 w.p.m., plus the theory. That was the requirement, then.

We respect you for having the vision and enthusiasm to help others see the excitement of amateur radio, by serving as a VE. Bless you heart!

You've probably helped your fellow hams and your local community many time over in recent years, and we respect you for that. Many unsaid thanks.

We even envy you for living in such a beautiful place as Yellowstone County. We're talking God's country, here.

So where in the hell does "having the guts to quit" fit into the above picture?

It never ceases to amaze me how folks in amateur radio can gloat over their "forward-thinking" technology, while being stuck in the cement of the past. It's like facing west, then bending down, sticking your head between your legs, and trying to observe the beauty of a new sunrise. No matter how you look at it, your ass is in the way.

So, you have 2 choices. Stand up, and greet the morning, or say, "Goodnight", and move on. Either way, you gotta take your ass out of the picture. If you're attitude is as you truly state it, then you no longer belong in amateur radio. Being a "ham" is NOT about being a code-aholic, a theory guru, or a techno-buff. It's about being willing to learn, teach, and serve, using the marvelous tools of electronics.

I sincerely hope that you take some time, rethink your early years, consider your achievements, contributions, etc., and perhaps the opportunities and unfinished business that still could be contributed by your efforts, and continue on in the fine tradition of amateur radio, or for heaven's sake, just get out of the way, as quickly and gracefully as you can. This is the year 2000, and we're standing up, looking for a brand new day.

I really don't see how in the world that keeps people from using "CB Lingo" or violating the rules. The best defense against those folks is to ignore them once they've been told not to do it.

Hi everybody,

I am desperately searching for informations on microwave downlink frequencies and transmission schedules (S-band and X-band) of interplanetary spacecrafts, e.g. Cassini and NEAR. I would like to try detecting the carrier signals with amateur equipment.

NASA and JPL responsibles do not seem to be willing to provide this information, they simply do not react at all to inquiries.

Any experience in this field out there?

All Right Andy!

I guess some people just won't give up, grow up, and move on. But
at least this shows there are HAMs ready to step to the plate to take
over for the people you'd probably rather have gone in the first place.

And to the 'Bill' that left. Good bye! Hope you get over the emotional
loss. And good riddance. Makes me wonder if you were any good
as a VE in the first place.... Who knows, right? Good or not, you're
not the kind of person I would feel proud about representing my hobby
to potential new entrants.

Mike

As close as I can give you, uplink is S band, 2.2GHz to 2.3GHz, 20KW out CCS (100KW available), 60-65DB gain depending on which antenna, 26M, 34M, 64M, or 70M. Down link, X band primary, about 8.3 to 8.4GHz, S band secondary, around 2.3 to 2.4 GHz. It is a ratio of 240/221 Down link / Up link with X band being 4x the down link Doppler shift is 1-2 Mhz. Receivers are Helium cooled, 2.4degrees K S band. 8.4degrees K X band. In the 1970's and early 80, the were MASERS feeding Parametric preamps. I believe they replace the Parametric amps.

>But before I do, just what is the general consensus over there about
>this whole thing? Are the complainers justified, or are they just
>whining?

There's a similar debate in the UK over the "liberalising" of licensing conditions regarding morse. My only worry is that it may lead to a similar "liberalising" of what are currently cw-only band segments.

>I know that you have different requirements for licensing, so it would
>be nice to get an entirely neutral point of view.

Hardly neutral as I use cw pretty well exclusively. :)

Having started, I may as well add that it would make more sense if instead of trying to relax the code requirement for hf licenses, our representative groups put their energies into getting a decent european allocation for 40m. Anyone for a "mass trespass" on 7.1-7.3Mhz? :))

My thoughts exactly. Morse code is only a small part of amateur radio.
Morse code has reached it's technical limits. There are other worlds to
explore. Also morse code is more of a talent thing. Some people have
it and some don't.

Yeah, so go ahead and turn in your badge, I've recently received mine
and will use it to further the service in getting new people interested
in the hobby, etc. and give back to the hobby/service.

Maybe the government could not stop the free speech so they
figured why not flood the bands to stop some of the
badmouthing in the last 7 years.
Why voluntarily give in and be defeated.

A similar type of tactic may have been used in the 60's when
they *supposedly* flooded the streets with drugs to shut down
the Black Panthers.

In that case, what we need is better enforcement of the bands
and it has been needed for some time now. I'm not sure that
lowering the code requirement will increase the problem.

I believe the FCC is taking steps to clean up bands but only time
will tell if it does any good.

This is pure bugle oil. Here's my vision of what will happen. Since new hams will have no motivation to progress beyond 5 WPM, they will not use CW. (QSO's at 5 WPM are torture!) Inevitably, CW activity will decline and the CW sub-bands will be eliminated (as has happened in Canada and elsewhere). The handful of CW ops will be fighting against SSB California kilowatts on 14010 kHz!

Doug,
RS-13 has been working fine using 2m and 15m up & 10m down. A good dos based tracking program is STS Orbit Plus. Info on the sat and download for the tracking program can be found at the amsat na site (www.amsat.org).

BTW, you need a 2m ssb rig for the uplink. Good luck and have fun.

I went to the JPL web site and gathered information on the
DSN and TMOD. In less time than it took for you to compose
this snotty response,
I was able to find a tracking schedule and the S-band
transponder frequency for Ulysses.

See

http://ulysses-ops.jpl.esa.int/ulsfct/textfiles/00dsn.txt

for the tracking passes and

http://ulysses-ops.jpl.esa.int/ulsfct/spacecraft/scframe.htm
l

for the transponder frequency to the Hertz.

DSN scheduling is quite complicated, and schedulers,
tracking stations and Mission Operations Centers are usually
too busy flying and tracking their missions to make this
information available to the casually curious. I suspect
that the Ulysses info is available on the web for the
benefit of project scientists or others who need this
information.

The VHF downlink (137.5/137.62 MHz) signal is FM, with a fairly
wide bandwidth. The modulation on it is a 2400 Hz AM subcarrier.

The signals are loud. Why not listen and see for yourself?

It is this type of elitism that is killing Amateur Radio.
In Europe they long ago moved to less classes under the
CEPT program. And a single code exam of only 10 WPM.

Every since the '70s, with the Bash books and CB, certain
hams have been pissed off that the "masses" might be able
to enter their little fiefdom. It is the same attitudes we
see with gun control. The elite do not want blacks or the
rednecks with guns. Self defense should be left only to those
who are "valuable". (Guns would be just ham radio if we
let the elites have their way.)

Sorry, but the masses have already discovered the Internet.
They do not need amateur radio.

I've put a sample of what you should hear on my web page at:

http://www.qsl.net/va3ldh/wxsat.html

I use a modified Radio Shack scanner with a homebrew quadrifilar helix
antenna and dual-gate MOSFET preamp.

People seem to really stress over this - I heard my first APT signals
by accident, and was able to get crummy but recognizable pictures
with a minimum of fiddling.

I have one too, but don't even know the function of all the
front panel buttons... :-)

They are listed in Germany's CQ-DL about 2000~2500 DM,
a 1.2 Ghz module recently was offered for 800 DM,
about half of the 'new' price.

Circuit manual is available from dealers,
a rudimentary PC control program is also available.

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

Sony has just announced a Family Service Radio that "trunks". Once you
enter a subaudiable tone code, the radio scanns the 14 channels looking
for an open channel before transmitting. Everyone one else with the Sony
radio in your group (and the same code) locks on to that frequency.

Why can't we hams have trunked repeaters? One good site and several
repeaters. Then trunk groups for the various segments of the community.

: I would figure this is one of the last ditch efforts to keep the Ham Bands
: available for "Amateur" operators. No matter what the requirements to get
: into the system, all previously licensed groups will have a beef.
: But, considering the current over-crowded spectrum which we enjoy to
Listen
: to as "Radio" communications, Watch as "television" communications, and
: support as "Public Service" communications, it won't be long before better
: communications equipment, able to work in the noiser "Amateur" bands is
: available for license. Then the strong Financial Lobby called
"Enterprise"
: and "Public Interest" will begin taking a closer look at the current
: "Amateur" bands as underutilized and request the FCC redress and reassign
: the bands under the guise of "Public Interest" This of course will mean a
: loss of precious communications spectrum to the highest bidder, as has
: happened in other areas of the spectrum.
:

Follow-ups set to just .misc and .policy:

In rec.radio.scanner N9NWO <N9NWO@AMSAT.org> wrote:
>Sorry, but the masses have already discovered the Internet.
>They do not need amateur radio.

Those poor, leashed folks. They're helplessly dependent upon
untold billions of dollars of computer equipment belonging to
thousands of corporation, interconnected by millions of miles
of cable, staffed by thousands of workers putting in tens of
thousands of man-hours per day to keep that complex system
running.

Hams, on the other hand, have not such dependence. It's the *only*
communications medium, in which any two operators anywhere in the
world, can communicate directly without using government or commercial
communication services. Those same two operators don't even need to
purchase commercially-built radios -- they can build them themselves.

Jeff

Canada and Australia could follow the US in reducing the Morse code examination requirement to 5 WPM for full HF access. Radio Amateurs of Canada announced plans this month to ask Industry Canada to eliminate that country's 12 WPM Morse requirement. The RAC Board of Directors has voted unanimously in favor of the proposal, expected to be filed soon. If enacted, the change would leave 5 WPM as the sole Morse code examination requirement for full HF access in Canada.

Meanwhile, the Wireless Institute of Australia reports it's seriously considering whether to push regulatory authorities to reduce the maximum Morse code license test speed Down Under from 10 to 5 WPM. WIA says it expects to discuss the matter in detail next month with the Australian Communications Authority.

The WIA says a majority of its membership divisions appear to favor the reduction from 10 to 5 WPM in Australia. The general issue of Morse code licensing requirements is expected to be a topic for debate at the IARU Region 3 conference the WIA will host later this year. Discussion of the International Radio Regulations regarding the Morse code requirement is expected to come up at the World Radiocommunication Conference set for 2003 in which Morse Code will most likely be eliminated as a requirement for HF access worldwide.

A single 5 WPM Morse code examination requirement for HF access goes into effect in the US on April 15 as part of sweeping licensing rules changes.

The United Kingdom and Sweden also have adopted 5 WPM as the Morse code examination requirement for access to the full HF amateur spectrum. The South African Telecommunications Regulatory Authority is said to be poised to act on a South African Radio League request for a lower code speed limit there. Other nations have expressed interest in the issue.

I don't know if any FCC regulations would prevent trunking in the amateur service, but certainly there's no technological reason trunking couldn't be used. But why?

Basically, most of the places where I've listened to 2 meters (probably the busiest
of the ham bands over 30 Mhz), and even more so on 70 centimeters and 220 Mhz, most repeaters are quiet 95%+ of the time. Some repeaters just sit there and ID

from time to time, but carry no conversations, as far as I can tell. A few high-level
repeaters get used a lot more, but it's almost impossible to find someone to chat
with at 9pm on a weekday even on these repeaters.

Trunked simplex operation -- now that might find a niche if trunks could be divided
by interest group or intention (e.g. DX vs. ragchew.) It would be useful not so much
to alleviate congestion as to simplify choosing frequencies for mobile operators.

You mean meet new people that hate you because you like microphones and
not Morse Code? You mean learn OLD things like Morse Code?

Forget about the current group of Hams that are close-minded and afraid
of change and new technology. We get a group of our OLD friends to get
licensed and have FRIENDLY conversations with each other rather than
whine and moan about the improved license requirements.

596. ** BC895XLT software! Download demo now!

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

Okay, I guess I might as well get started looking for one of these. Not sure how hard they are to find, but I'd like to track one down before the new bird goes up. Looking for the 1.2 Ghz module for the Yaesu FT-736R. I do have a 6 meter module I would give in partial trade, if someone is interested in that. I may end up selling the 6 meter module outright to make room for the 1.2 module, when/if I find one, since I don't have any plans to use 6 meters very much.

Hi Vince, Well I guess that is one way to address the issue.
Its is your decision to make.
However, I wish you would reconsider.

You have invested a lot of time and efffort getting where you are.
You are in a very good position to guide new hams in the right direction.
Our government has made a desision and like it or not we hams must live with
it.
If we sack it in with out any effort then our hobby is truly doomed.
We need poeple like you "fighting in the trenches" on the inside to keep
what we have.
Think of it as a new challange.
Ham Radio has and will continue to change with or without our help.
I would rather stay and help do what I can to promote what I consider to be
the good things about our hobby.

Like I said it is your decision but I really wish you would reconsider.
One man CAN make a BIG difference!
You probally have already and just do not know it.

Anyone had any experience with the 145/435 eggbeater antennas by M2.
Particularly interested in FO-20/FO-29 results using these antennas.
Thanks. Pat K4AVO

Hi all,

Have FT980 in great shape for sale. Comes with hand mike, service manual and owners manual, cw filter. Computer controllable. Was Yaesu's top rig years back. Non smoker, second owner.

Also, FTV107 vhf/uhf transverter. 2mtrs and 440 all mode. Modified to work with the 980 and works great. Will work beautifully with Phase 3D when they launch it soon.

Want $700 plus shipping. Will consider partial trade for vintage gear.

Dave, WH6OL

Will,

Sorry to see you go, as maybe you had some positive things to
do for HAM radio in the past, but the bottom line is if you're going
to be negative about the changes, and towards the new people,
well, so long, HAM radio doesn't want or need you.

Regardless of your personal feelings, you should be presenting a
positive attitude and be a role model for anyone new to the hobby.
Bitch if you want to, but work for change, don't whine that it's not
how "I" remember it and threaten to pick up your toys and go home.
Just remember, the newbies might just have their own toys.

I'm sorry, (I really am, but not for you, for the hobby that has
'hidden' people with cancerous attitudes for too long) but things
have changed. It's just too bad if you and Vince don't like them.

And I have been a licensed HAM for about 19 years, I'm not
one of the 'newbies' you seem to have a pathlogical fear of.

First I have to ask... "Horse shoe stew"???

But I agree... In that I think the conflict of the pro-code vs the
no-code
is what brought down the house of cards. It was built up for so
long as the holy grail, the savior of HAM radio, keeping the
non-believers at bay, that when it finally was recognized that
something had to be done, there were so many people sick of
the arguements, sick of the atttitudes, and sick of the fraudulent
claims, that they just wanted the whole thing to go away.

I really do think that if we had 'moderated' the influence of CW
over the years in how it restricted HAM radio rank advancement
we'd still have it, at least to some extent, in a multi-tiered form.
But the bastions of no-change brought about their own death with
a backlash against their arguements and attitudes.

Hey, I like CW, but I felt the arguement would be the death of HAM
radio. Turned out it was close, but not quite. It was a suicide, but
only of the CW-or-die crowd.

I don't. The whiners are upset that the 5WPM I passed back then is now
enough for my upgrade to Extra, as if CW skill were any kind of
determining factor in one's character or technical ability.

> Perhaps you are a lower class of ham who never upgraded.

Yep. Technician since 1981 ("Plus" since the FCC did that). As of
about a month and a half from now, I will be a General, then in a couple
of months I'll take the Extra exam.

I hope some one can help me.

I live in Europe and I'd like to restart my hobby working with sat's with 2m uplink and 10 mtr down. I found a program called STSplus and Win orbit. The funny thing is both program give a different tracking for the same sat at the same time? How can I be sure. Please can anyone help me out in helping configuring the programs?

Thanks for your response to:

pvdbos@hetnet.nl (PE1KEV)

First, I thought the FCC wasn't going to assign call signs with
"offensive" type words, second, unless you are using your middle name as
your first name, the call sign belongs to a "Mary".

shouldnt be, must hav a setting wrong, but run both programs, and listen
for the satellite, they also have beacons, and when you hear it, check
which program did the right prediction....

My second choice for a vanity call was N4SEX. It's available. K4SEX
is a radio club in Atlanta, I think!

Use up to date Kepplerian elements from www.celestrak.com
Check the accuracy of your tracking program against the
Java satellite tracking program at:
http://liftoff.msfc.nasa.gov/realtime/JTrack/Spacecraft.html

I use SatTrack for Linux. It is quite accurate, even when
the Kep's are more than a week old.

Ok while tresure hunting in the local junk store I came across this some
kind of Radio, C.B., Ham Radio, or some thing I dont know. It says
Hammerlund on it,
It has a off, rec, send, q mult-cw switch
Antenna adjustment dial
Main tuning dial
sensitivity dial
Main, Avc switch
Tuning Range Mcs switch, 20 bs, 10-30, 4-10, 1.6-4, .55-1.6,
Off, lim on swtch
Audio Gain dial
Band spread dial
selectivity dial
Freq. dial
Carrier level gauge
and it has two gauges that have all kind of numbers
ON THE BACK
3.2 ohms speaker hook up
Phones hook up
Meter zero adjustment knob

If any one can tell me about this or where I can find out about it, I
would be very thank full.

Mark

It sounds like a Hammerlund receiver. It should have its model number somewhere. It would be something like HQ110. They made several. I have a HQ180 and have for years.

Newbie Question so excuse the obvious.
Looking for a program for Sat.tracking,(Win 95). I've seen the Kepplerian data sheets on Amsat,but looking for something that would basicly tell when/where a satellite would be in my area,(Southeast).

Also,any suggested sites for Ham Radio related satellite sites, other than AMSAT and ARRL?

Ed,

On the AMSAT web site are downloadable tracking software and links to other sites with software. Surprised you found the Kep's but didn't see the software.

I still use the STSPLUS program. It's runs in a DOS window but it's simple, shows the next 3 tracks graphically in either flat map or 3-d, and gives predictive printouts including visible passes. Originally written for tracking Space Shuttle (STS) missions it works well with all sat's I've tried.

653. UO-14 signal report FWIW

Newsgroup: rec.radio.amateur.space
Date: 2000-02-28 00:00:00 UTC
From: Erik van Bronkhorst <vanbronkhoew@navair.navy.mil>
Message-ID: <38BB0D9B.ABDBCB8D@navair.navy.mil>
Source record: 10087

This weekend presented the first opportunity for me to
try UO-14. Using my modest satellite station the bird
was very loud and quite clear; much easier to receive than
AO-27 for example. It made a pass directly over my QTH
and was so loud at one point I grabbed my Alinco DJ-C5
"credit card" HT and tuned it to 145.975. In between the
flurry of people calling I was able to discern its (my) carrier
against the background, while monitoring with my regular
satellite gear. This using the 4" antenna and 300mW, indoors.
I doubt if my voice would have been copyable however.
Next I tuned the little HT to 435.070 and was shocked
to hear the squelch break intermittantly and copyable
voices! This from inside my house. I was never able to
hear Mir from indoors, but was readily able to hear it
outdoors with my HT. I am in southern Cal. so the
FM birds are pretty crammed when over me, however
I suspect that in a less populated area, one would have
no difficulty working UO-14 with a run of the mill 5W
dual band HT, on a high pass. Using a mobile should
be trivial. This bird is the best bet for first time sat ops.

Bullshit. 95% or more of the population would not have any idea waht
you were saying if you used Morse Code. Back to the question being
avoided by changing the subject to something completely idiotic...

Oh, wait. I have a "nasty" callsign, and you commented on its
nastiness, but you can use that kind of language freely and openly?
Uh-huh. I think I recognize a double set of standards when I see
them...

Kim W5TIT <<< No bullshit.

I mentioned that the "FCC" used to have a problem with certain words,
NOT myself! Go do a search on other call signs with the suffix TIT and
you will see that they do not come up with anyone. This is yet another
silly attempt to avoid the question and change the subject AGAIN!

Well good, that is a start. You are starting to use thinking to see that there is no connection to having to learn every language in order to not be dumb or lazy. Now continue using your brain and you will also see that there is no logic in having to learn Morse Code if you want to talk into a microphone on HF bands. Nor is one dumb or lazy for not wanting to learn something that has nothing at all to do with what that person wants to do.

Some people like to ride horses, but horse lovers should not force car drivers to learn how to ride a horse before being allowed to drive a car. Some people like Morse Code, but Code lovers should not force people who like to use microphones and speech to talk to people on the radio to learn Morse Code before they are allowed to use microphones on HF bands.

You should ONLY learn Morse Code if you intend to USE Morse Code. If you never have any intention of USING Morse Code, then taking the time to learn it to satisfy someone ELSE is IDIOTIC!

So Jery .... Do you complain to the College that learning history or speech
has nothing to do with electronic engineering?
I dont think so!
If you want the degree you take the required classes or you dont get it.

As to the question asked by Jenny about learning every language .... that is
so lame and stupid that it dont deserve an answer!

Ed,

I'm not a "hard core" satellite, just a casual listener. I have tracked and listened to a number of them, including the earlier Space Shuttle missions with amateur radio and the Sputnik Jr's. If you have packet capability you'll have a lot more to work than just voice. I recently have a renewed interest, but I find it frustrating trying to figure out which satellites are working and when they are turned on. I don't have packet and my dual band radio won't go down below 438, so I'm primarily in a listen mode. I haven't figured out the HF transponder satellites yet but that'll be the next hurdle.

Of the various VHF/UHF sats here's what I've found.

SO-35 and AO-27, apparently are on only on the weekends and only durning daylight passes over the US
UO-11 is on most of the time with packet data. It's useful for making sure your tracking software is working correctly.
UO-14 just got put it FM repeater mode, but not sure of its on/off schedule.
OPAL has a 437.1 beacon/data but the picosat (StenSat) that was UHF/VHF repeater, failed to work.

Hope that helps. I reloaded WinOrbit and tried to use it but it just wasn't as cool as STSPlus. Now if STSPlus would just track multipe sats.....

Alf - W4ADS

Actually William, One reason I chose to get my EE degree from Texas A&M
is that they didn't require a foreign language for the BS degree.

Date: Tue, 29 Feb 2000 14:12:11 +0100
From: Peter Guelzow <Peter.Guelzow@arcormail.de>

Dear Friends,

it's official!!

the following information is from the "e-space" ARIANESPACE NEWSLETTER,
FEBRUARY 2000, No. 151 and can be downloaded from

http://www.arianespace.com/news_espace.html

Provisional Ariane Launch Manifest (February - July 2000)
****

Flight Launcher Payload Launch Date

V127 Ariane 44LP SUPERBIRD-4 February 16
V128 Ariane 505 AsiaStar and Insat 3B March 16
V129 Ariane 42L Galaxy 4R April 6
V130 Ariane 506 Astra 2B and GE-7 May 23
V131 Ariane 44LP Europe*Star or PAS-1R Early July
or 44L
V132 Ariane 507 PAS-1R or Europe*Star, Late July
AMSAT P3-D and STRV-1C/1D

In connection with its customers, Arianespace retains the right to
modify this provisional manifest as the result of the availability of
payloads or for other reasons.

73s Peter
db2os@amsat-dl.org

PS: P3-D is misspelled as 'AmSat P-3B' in the original version, which
is indeed us ;)

How to turn $6 into $50,000!-Or more!!-It 100% works!!!
READING THIS COULD CHANGE YOUR LIFE:

This really does work if you give it a honest try!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I though, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading.
Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00.
Well, GUESS WHAT!!... Within 7 days, I started getting money in the mail! I was
Shocked ! I figured it would end soon, but the money just kept coming in. In my first
week , I made about $25.00. By the end of the second week I had made a total of over
$1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now
my fourth week and I have made a total of just over $42,000.00 and it's still coming in
rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.

I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it). Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.
Here are the 3 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." "Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).
Next, place one paper in each of the 6 envelopes and seal them, MAKE SURE THAT THERE ARE ENOUGH STAMPS ON YOUR ENVELOPES. You should now have 6 sealed envelops, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Mail the 6 envelopes to the following addresses:

#1) William Rosser - 254 Getzville Rd. Amherst, NY 14226
#2) Rae Patterson - 150 Hauli St. #150 Wailuku, HI 96793
#3)Connie Wrenn - 111 Chesterfield Dr. Elizabeth City, NC 27909
#4)Christopher Petersen - 222 Haulani St. Pukalani, HI 96768
#5) GERALD R. DE CROCE- 2 HERITAGE CT. MORRIS PLAINS,NJ 07950
#6) Alex Beltran - 6650 Hogan Dr., Sacramento, CA 95822

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add YOUR Name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups or emails, (I think there are close to 50,000 groups) All you

need is 200, but remember, the more you post, the more money you make!
**EVERYBODY AROUND THE WORLD CAN DO IT, BUT REMEMBER TO PUT
ENOUGH STAMPS ON YOUR ENVELOPES!!!!!**

This is perfectly legal! If you have any doubts, refer to Title 18 sec.
1302 -&- 1341 of
the Postal lottery laws. Keep a copy of these steps for yourself and,
whenever you
need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the
honesty and integrity of the participants and by their carefully adhering to
the directions. Look at it this way. If you are of integrity, the program
will continue and the money that so many others have received will come your
way.
NOTE: You may want to retain very name and address sent to you, either
on a
computer or hard copy and keep the notes people send you. This VERIFIES that
you
are truly providing a service. (Also, it might be a good idea to wrap the $1
bill in dark
paper to reduce the risk of mail theft.) So, as each post is downloaded and
the
directions carefully followed, six members will be reimbursed for their
participation as a
List Developer with one dollar each.
Your name will move up the list geometrically so that when your name
reaches
the #1 position you will be receiving thousands of dollar is CASH!!! What an
opportunity for only $6.00 ($1.00 for each of the first six people listed
above). Send it
now, add your own name to the list and you're in business!

--------DIRECTIONS--------FOR HOW TO POST TO NEWSGROUPS--------------
Step 1) You do not need to retype this entire letter to do your own
posting. Simply put your cursor at the beginning of this letter and drag
your cursor to the bottom of this document, and select 'copy' from the edit
menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top
of the blank page. From the 'edit' menu select 'paste.' This will paste a
copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do
your postings in different settings, you'll always have this file to go back
to.
Step 4) Use Netscape or Internet explorer and try searching for
various newsgroups (online forums, message boards, chat sites, discussions).
Step 5) Visit these message boards and post this article as a new
message by
highlighting the text of this letter and selecting paste from the edit menu.
Fill in the
Subject, this will be the header that everyone sees as they scroll through

the list of
postings in a particular group, click the post message button. You're done with your
first one!
Congratulations THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!

BUT YOU HAVE TO POST A MINIMUM OF 200**
That's it! You will begin receiving money from around the world within days! You may
eventually want to rent a P.O. Box due to the large amounts of mail you will receive.

----------Now the WHY part----------
Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With an original investment of only $6.00! AMAZING!
When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday? JUST LIKE YOU are now!!

So, can you afford $6.00 and see if it really works?? I think so

Remember, play FAIRLY and HONESTLY and this will really work.
GOOD LUCK!!!!!!!!!!!

"Hard work beats talent, when talent doesn't work hard"

I have used these very successfully on both FO-20 & FO-29

I find that a pre-amp on 435 makes a big difference - I use the ARR P432VDG

I also use a Teletec amp on the 2m uplink

I use the version of the ant with radials, which according to M2 is optimised
for near-overhead passes.
However, I can sometimes have QSOs horizon - horizon.

There's a lot of resources out there. The following pages have a
bunch of links to resources (and I'm sure you can find a lot more):

http://www.pacific.net/~brooke/Astro.html
http://www.xylem.demon.co.uk/kepler/
http://www.celestrak.com
http://indigo.ie/~gnugent/dnso/software.htm
http://www2.satellite.eu.org/sat/vsohp/satintro.html
http://www.amsat.org/amsat/ftpsoft.html

As far as a recommendation, I personally use OrbMaster. You can get
the shareware version at

http://www.pond.com/~ssp

Take a look and let me know what you think.

This may seem silly, but it has burned me several times with other
programs: make sure that both programs are using the same time zone.
Some programs default to local time, and others to GMT time, and if
your two programs don't use the same standard, then they'll give you
different predicts.

Also, I would suggest you take a look at OrbMaster as an alternative
to the programs you've already seen. The shareware version is at

http://www.pond.com/~ssp

Good luck
Alisa

The Armenian judges gave it a 9.8 on the Olympic Troll-O-Meter,
but they were over-ruled by the umpires in instant replay, who
award it a 2.6

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious.
It was poorly written, poorly executed, and was so incredibly
lame as to lack the true drawing power of a really masterful
troll. Maybe as high as a 3.3 for the sheer stupidity of the
premise, but a 9.8? Never! The Armenian judges tear their
hair out, throw their balalaikas down in dismay, and perform
the traditional Armenian Dismay Chant! They demand a recount!

Regards,

Hans, Lord High Keeper of the Troll-O-Meter

One of the ways to frustrate a troll is to answer unemotionally.

> The proper response, since you felt compelled to answer, would have been
> "Cut the Red/Black wire coming out the back of the rig"

But to get the proper reset function, they have to be cut simultaneously
with the power on. :-)

If you're upgrading to extra, you already have an amateur radio license and
therefore should already be familiar with what a diode looks like and you
should already know the answer to your question. Now, go away. We already
have a bash-fest over legitimate amateur radio topics and don't need you to
stir "the already volatile pot."

Dear Charlie Troll, cut all the diodes -- they only block the current most of the time. If you're not sure if it's a diode, cut it anyway -- it's probably either a resistor (slows current down) or a capacitor (doesn't really allow any current flow), so who cares?

Now, after removing all those blockages to power, you'll have to replace them. I suggest getting an oxy-butane torch or something really hot and melting a whole lot of solder into the rig. Use acid core to make sure there's no cold solder joints. Play the torch over the rig for a minute afterwards to make sure the solder is properly spread, then cool it down with heavily salted water. You now have a rig that will handle a lot of power.

And please don't include rec.radio.scanner in future.

Ron of that ilk.

702. P3D dummy Keps?

AMSAT had a dummy set several years ago. I tried them and they ran fine
on InstantTrack, but that was before Y2K. They may still be on the
AMSAT website.

The site mentioned has a couple of patches for InstanTrak, but neither one is described as a Y2K patch. And neither one helps. I found a KEPS Y2K conversion editor for use in addition to the tracking software on an offshore site some time back, but never installed it because the word on this newsgroup was that InstanTrak would have a patch or update soon. Editing KEPS is a drag.
Didn't happen.

While not needed, it is very nice to have two radios. One that can receive and one to transmitt with. I have talked with some that have tried it with the 706 and they were frustrated because they could not tell where the downlink was or if they tried to uplink to a CQ they were ont heard due to not being on frequency.

You're right, Michael, I should have said, not legally except
for emergencies. I actually have never used my ham transceiver
on the CB bands. I "confessed" because I knew it would drive
Dick right up the wall. I had my emergency blinkers on and was
considering using my IC-706 on CB when a kind motorist pulled
over to see if he could help. If someone had not stopped to help
me, I probably would have tried using my IC-706 on a CB frequency
since I didn't have a CB radio with me at the time and I was
out of range of any 2m repeater.

When you are going to use P3D for voice QSO's, you probably are not going
to need doppler control. That is primarily useful for semi-automatic
operation on single-channel systems (like pacsats).

I decided not to turn in my badge before April 15th because I might still
be able to help test someone who wants to be a real ham.

Radio Meteor Observation Bulletin No. 79 March 2000

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: Biedenkopf C2 TV, Video Frequency 48.250 MHz,
ERP 100 kW, Azimut 90 +/-65
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: own written software "MSD" with sound card.

| Feb 2000
```

Note:
. Finally I have a good meteor detection software, called MSD, using a sound card! Electric noise pulses, computers, household electrical appliances and especially the Radio Intermodulation of TV C4 of Barcelona, make cities bad places to use software like MCT5X or my old DATA CAPTURE software using a 14 bit AD/DA Card. In the near future I will put the software on my web site. I am positive that the observations are meteors. The software also makes ".wav" files for further analysis.

Enric Fraile Algeciras

Observer: Jean-Louis Aillaud
Location: Sainte Clotilde, R&#65533;union Island (55 29' E, 20 52' S)
Frequency: 89.30 MHz
Transmitter location: Mauritius Broadcasting Corporation SUGAR FM
Antenna: 3 elements Yagi FM (WISI UA 05), horizontal polarisation
azimut 247 deg, elevation 35 deg
Receiver: FM tuner TEAC -T-R 400
observing method: Electronic interface on LINE output audio signal are fed in
COM1: of laptop 486
Meteor c 2.05 processes the signal and records on hard disk the time
of the events
METEOR parameters: SAMPLING = 440, THRESHOLD = 0.8, DELAY = 30 s

Jean-Louis Aillaud

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.24 MHz
Receiver: Icom R-10
Antenna : resonant dipole

Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: CW
Recording method: listening by ear

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the Ghent University format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

February 2000

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 1 hour

Maurice De Meyere

Location: Astronomical Observatory, Ghent University, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as

a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. the situation with fewer transmitters since early January 2000 continues.

Pierre De Groote

Observers: Del Dobberpuhl, John Meyer, Jack Meyer
Location: Van Andel Creation Research Center, Chino Valley, AZ. USA. 34 50' 50" N, 112 29' 50" W. Elevation 1347 meters above sea level. Frequencies: 88.5, 88.9, and 89.7 MHz for signal FM receivers; 87.9 MHz (currently an unused frequency) for noise FM receiver.
Transmitter Locations: Many possibilities including: El Paso, TX; Mesquite, TX; Commerce, TX; Abilene, TX; Farmington, NM; Colorado Springs, CO.
Antenna: dipole housed in corner reflector built from wire screen. Open end of reflector tilted at about 65 degrees above horizon and facing due east.
Antenna Pre-amplifier: 27 dB gain.
Coax Cable: 152 meters of RG-8
Receiver inputs: Four-way splitter with outputs to each receiver
Receivers: Four OPTIMUS STA-80 FM receivers modified to 10KHz band width using IF amplifiers with 80 dB dynamic range signal strength output voltages.
Data Acquisition: DATAQ type DI-190, 2-channel module connected to computer serial input port. Acquisition rate is 40 samples per second for each channel. Channel one is the combined peak signal amplitudes from the three signal receivers. Channel 2 is the signal amplitude from the noise receiver. Data are reported only when signal strength at the antenna exceeds -124 dBm. Storage continues for one second after signal drops below -124 dBm.
Interference Rejection: Data storage is inhibited if interference at the noise receiver's frequency exceeds -122 dBm at the antenna. Inhibiting continues for one second after noise level drops back

below -122 dBm.
Data Reduction: Mostly automated computerized reduction.
Data Format: Results are shown as total seconds of reflection time per hour.
When no figure is shown, the equipment was either out of service or
results could have been contaminated by sporadic-E or interference.
Data are in comma delimited ASCII.

For further technical information contact Del Dobberpuhl or John Meyer at
crsvarc@primenet.com

Signal duration distribution for the above period

Duration (s)	Number
< 0.1	1119
0.1 to 0.3	755
0.3 to 1	523
1 to 3	356
3 to 10	98
10 to 30	0
> 30	0

Notes:
. volume was reduced from Nov 11, 1999 onwards to increase signal/noise ratio (see also RMOB No. 77)
. computer down between Jan 10-12 for repairs

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by

JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

-------------------------------------------------------
Count 2 1 1 1 0 1 2 0 4 1 0 1 1

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
```

n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
LT = local time = JST = UT + 9 hours

Sadao Okamoto

Observer: Pierre Terrier
Location: Canet, France (3 36'E, 43 41' N)
Frequencies: 102.5 MHz
Transmitter Location: Several, which complicates things!
Antenna: 5-element Yagi FM, horizontal polar.
azimuth 90 deg (E), elevation 20 deg.
Receiver: FM Tuner Kenwood KT-54 L
Observing method: Electronic interface on LINE output audio signal are fed in
COM1: of Laptop 486.
METEOR v 4.0 test version processes the signal and records on
hard disk the time of the events.
METEOR parameters: SAMPLING = 120, THRESHOLD = 0.8, DELAY = 30 s

Pierre Terrier

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna: Comet made 50 MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is
received by a low frequency filter (880 Hz)and fed into
the D/A converter and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list,
please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge
from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENT: French mailing list

To subscribe to the METEOR soft user list, go to:

Oh, gee whiz, a boon from on high... don't do me any favours.
You started this thread, so I guess you had to bring it back up, although it's been dead for a while. To add to your quitter's post of a month ago, you now state that you WON'T wimp out as early as you first said, and then say that any amateur who gets licensed after the April changeover cannot be a "real ham".
I shudder to think of what kind of help you'd be giving to a prospective amateur... "Listen, sonny, when YOU get your license, you'll be better than anyone who gets it after April... YOU'LL be the next generation of highbrow elite who baselessly feel they are better than the other guy and never let a chance go by to say so, whether it's appropriate or not, either on the air or on the 'Net."
I'd have hoped you decided not to quit because you rethought the absurdity of your whining, but I guess you're sticking around to make it worse.
Oh well, que sera, sera...
Mike

Hi Steve,

Checkout the DX Summit, there are a few logged there under "satellite"

http://oh2aq.kolumbus.com/dxs/

73,

Antonio
(sorry didnt work them myself.. constant rain prevented me from
working on antennas :-(..).

In article <38c53636_1@news.continet.com>,
"Steve" <ai7w@NoSpam.com> wrote:

I decided not to turn in my badge before April 15th because I might still
be able to help test someone who wants to be a real ham.>>

No, laddy. Better that you quit and go hang with your superaged friends in
your little corner of HF heaven, as far away from the rest of us as you can
get, and keep to your daily discussions of hemorroids and the rising cost of
nursing care. In a few years you and your kind will be too senile to work a
key anyway. Can't wait.

Ten-Four, good buddy, catcha on the skip.

Thanks Rob and others for the replies
-- I guess I should have thrown in the fact that I was intending to
also work the analog sats like AO-27 , uo-14, SO-35 and the like.
Several years ago I used to work a lot of AO 10 and 13 (cw).

Alisa,

Have you had an opportunity to compare the accuracy of Orbmaster to other programs such as STSPLUS, LOGSAT, NOVA, etc? Also, if you are using the registered version, how much does it cost. I couldn't find that information on their website.

Thanks

Jeff Gibson, KB0DSH

Would 2m & 70cm Eggbeater antennas work for the new Phase 3 in SSB mode?
If so, it would save me a couple of thousand dollars that I would otherwise
have to spend for directional antennas and AZ/EL rotator.
Just curious.

Dear All,

I am in the process of setting up a satellite station. I will be starting with FM based satellites like AO-14 & Sunsat. I will be in the future going to multimode, ssb, cw, etc. What antennas should I buy ? Should I go with the Arrow antenna for now and then buy some a 70cm & 2mtr antenna that supports cross polarization for future ?

Thanks,

Jeff

Almost on topic, but is really funny...

http://dailynews.yahoo.com/h/ap/20000303/sc/space_station_trash_1.html

Science Headlines

Friday March 3 2:55 PM ET

Workers Seek Space Station Parts

HUNTSVILLE, Ala. (AP) - Boeing Co. workers unsuccessfully combed a
Huntsville landfill looking for two mistakenly discarded parts of
the international space station valued at $750,000.

The nitrogen and oxygen tanks used by astronauts were never found
despite a ``pretty intense search,'' said Boeing spokesman Jim Keller.

742. news article: 66 Iridium satelites likely to become floating space junk

Newsgroup: rec.radio.amateur.space
Date: 2000-03-10 00:00:00 UTC
From: ds0007@medtronic.COM
Message-ID: <8ab7ln$j19$1@gazette.corp.medtronic.com>
Source record: 10026

Another almost on topic article:

http://www.usatoday.com/money/mds2.htm

Iridium users may be cut off permanently

66 satellites could be space junk if $6B system shuts down

By Kevin Maney, USA TODAY

[...]

Motorola, which built, operates and owns 18% of Iridium, is sending out the notices this week. "Unless a qualified buyer comes forward and provides additional funding by March 15," the letter says, "we do not expect Iridium service to be available after 11:59 p.m. ET on March 17."

[...]

While the system works, Iridium has fallen behind the times. It can handle only analog voice calls and pages in a market driven by digital data. Plus, land-based cellular systems have spread across almost all of the developed world, usurping the need for Iridium.

Once service is stopped, it will take time for Iridium's satellites and worldwide ground stations to be decommissioned, experts say. No one's sure when, but at some point during that process, it would be nearly impossible to restart Iridium. The 66 satellites would be left to float in space.

[I thought the Iridium satellites were capabable of induced re-entry entry. Perhaps this would be a better option. How long will it take for these satellites to re-enter on their own?]

What other uses could they have? It seems like that much communication power could be adopted by someone for another purpose? After all, if they are just going to be floating heaps of lost money for Motorola if no one buys them, then it seems like a tiny bit of cash could be used to buy up the whole network worth $6,000,000,000 and then transfer SOME kind of data.

And as we all know, Iridium is the 77th element in the periodic table, representative of the original design of 77 satellites. While the 66th element in the table is, Dysprosium, a rare earth metal discovered by de Boisbaudrain in 1886. Dysprosium is a component of glass blowers spectacles. With due respect to professor de Boisbaudrain, it sound like it's all down the drain to me.

748. PB and PG v.1.4 - programs for communicating with Microsat satellites

Newsgroup: rec.radio.amateur.space
Date: 2000-03-11 00:00:00 UTC
From: Bent Bagger <bentbagger@my-deja.com>
Message-ID: <8adh2h$83f$1@nnrp1.deja.com>
Source record: 10032

I have uploaded version 1.4 of PB and PG for Linux to Metalab.unc.edu.
The file
name is pbpg-1.4.tar.gz. I have placed the file and the accompanying
lsm-file in /incoming/linux. The target directory is
/pub/linux/apps/ham.
The file may also be downloaded from
ftp://ftp.amsat.org/amsat/software/Linux/pbpg-1.4.tar.gz.

The updated documentation is found in the file named README.

The following changes have been made since version 1.3:

- The programs are no longer installed SUID. This removes a security
hole that existed in previous versions.

- The build process is based on the use of the ax.25 library (ax25lib).
Use version 1.3 if you are on a version of Linus that does not
support ax25lib. If you want to remove the security hole from earlier
versions, change the two lines in Makefile that install the programs
to read:
install -g root -o root -m 0755 -s pb /usr/local/bin
install -g root -o root -m 0755 -s pg /usr/local/bin

The following is (still) believed to be an incorrectness:
- Sometimes PB will send requests for directory fills when it is not
needed. I have only seen this with AO-16 but it has been reported to
happen
with KO-25 as well.

The lsm reads as follows:

Begin3
Title: PB and PG for Linux
Version: 1.4
Entered-date: 10 MAR 2000

Description: PB and PG for Linux are program used for download from
and
upload to digital satellites (Pacsats) supporting the FTL0
protocol. This software allows you to directly communicate
with the Microsat series of satellites. It provides a
Curses (Ncurses) based user interface. It features automatic
directory fill requests and simple, rules based file
download requests.
This version of the programs will work with kernel
revisions 2.2.13 or higher.
Keywords: AX.25

Dayton Hamvention is only a couple of months away. I am thinking of purchasing a rig to work the birds with.

Which ones are you using and what are the pros and cons of them. I would like a little in-put from all of you long and short time users out there as to what you really like and dislike.

Thanks

In your previous post you said:
W6RCA has been reported to Hollingsworth for assisting in the illegal
modification of type accepted radio equipment.

I had a tech. work on a highly modified TS-520 once, and he told me
that to clear his responsibility for working on it, was to clearly tell
me that operating the equipment on 11 meters was illigal. Now how in the
hell do you get in trouble for simply pointing the way to the mod. sheet
posted on the web? Yeah, we need more people like yourself on the air
and on the web! Crawl your dumb ass back under the rock from which you
came troll and think with your OTHER head.

751. RS-13 Telemetry Decoder available

Newsgroup: rec.radio.amateur.space

Source record: 10035

I've composed a quick-n-dirty perl script that decodes RS-13 telemetry (from text format) into a one-screen "dashboard" display of the channel data. You need a DOS executable version of perl (5.001) to run it. Drop me an email if you're interested in getting a copy.

Message-ID: <20000311171108.02850.00001215@ng-fw1.aol.com>
Source record: 10036

This newsgroup has been very helpful in helping me find a satelite tracking program. I can predict when RS13 is in listening range and find it when I turn on ten meters.

Now, my question. How do you know when RS13 is using the 15 meter uplink and when it is using the two meter uplink? I should be ready to try to find my signal in the downlink, but I need to know which band to transmit on.

Thanks,

Dave W8IJ

The current ANS bulletin says mode KA, which is what it's been for
a very long time. Nor does it show any sign of changing.

Only if you are a 20 WPM Extra. Of the several HF rigs I've owned since the Novice Enhancements, every one of those which came from an Extra had been modified to run CB or other unlawful freqs. In one case, an estate sale, I had to buy replacement crystals to modify the radio BACK to ham (the 10m band had been changed to 11m), and his widow said that that was the only radio he ever used.

The news release I saw said that once the system shut down, the
satellites would be de-orbited; a nice term for "sent burning up into
the atmosphere".

No modification of type accepted radio equipment has occurred or was suggested. The problem is that for it to be used on CB it needs that acceptance, not the other way around.

774. PB and PG v.1.4 - Linux programs for communicating with Microsat satellites

Newsgroup: rec.radio.amateur.space
Date: 2000-03-13 00:00:00 UTC
From: Bent Bagger <bentbagger@my-deja.com>
Message-ID: <8ai6mr$am0$1@nnrp1.deja.com>
Source record: 9908

I have uploaded version 1.4 of PB and PG for Linux to Metalab.unc.edu.
The file
name is pbpg-1.4.tar.gz. I have placed the file and the accompanying
lsm-file in /pub/Incoming/linux. The target directory is
/pub/linux/apps/ham.
The file may also be downloaded from
ftp://ftp.amsat.org/amsat/software/Linux/pbpg-1.4.tar.gz.

The updated documentation is found in the file named README.

The following changes have been made since version 1.3:

- The programs are no longer installed SUID. This removes a
security
hole that existed in previous versions.

- The build process is based on the use of the ax.25 library
(ax25lib).
Use version 1.3 if you are on a version of Linus that does not
support ax25lib. If you want to remove the security hole from
earlier
versions, change the two lines in Makefile that install the
programs
to read:
install -g root -o root -m 0755 -s pb /usr/local/bin
install -g root -o root -m 0755 -s pg /usr/local/bin

The following is (still) believed to be an incorrectness:
- Sometimes PB will send requests for directory fills when it is
not
needed. I have only seen this with AO-16 but it has been
reported to happen
with KO-25 as well.

The lsm reads as follows:

Begin3
Title: PB and PG for Linux
Version: 1.4
Entered-date: 10 MAR 2000

Description: PB and PG for Linux are program used for download from
and
upload to digital satellites (Pacsats) supporting the
FTL0
protocol. This software allows you to directly
communicate

with the Microsat series of satellites. It provides a
Curses (Ncurses) based user interface. It features
automatic
directory fill requests and simple, rules based file
download requests.
This version of the programs will work with kernel
revisions 2.2.13 or higher.

775. Re: news article: 66 Iridium satelites likely to become floating space junk

Newsgroup: rec.radio.amateur.space
Date: 2000-03-13 00:00:00 UTC
From: Craig Patterson <craiglp@swbell.net>
Message-ID: <38CD1F05.93C6B87E@swbell.net>
Source record: 9909

For the Iridium partners to get full benefit from tax losses and such, the system must be scrapped. To be scrapped the sats must be deorbited. So, it is unlikely the ham community can come up with the cash to offset the tax advantages of turning the sats into 'shooting stars'.

Good luck finding an IC-970! You might take a look at the Yaesu FT-847.

Fred,

You might want to wait to see if P3D get's up OK first before spending a lot of money. Their isn't much left in the way of "easysats", and AO10 is getting harder to work by the day. The 970 is indeed a good radio, but hard to find. The FT847 is good, but without any L-band or S-band capability. The FT736 has an L-band module available, if you can find them. (I have a 736 and it's a great workhorse) The 821 ICOM is probably a good choice with it's price.

However, having said all that; I firmly believe that if P3D makes it up, there will be so much new satellite interest that the major manufacturers will come out with some new radios with mode L/S built into them.

Consider also the possibility of a solid radio (HF or otherwise) plus a
transverter or two. That way you can concentrate on a really good prime
mover and then mix and match up- and downlinks as you need to.

There is rarely much point in having a 1270 or 2400 MHz radio in the
shack.
It's much more effective to have a converter out by the antenna and a
lower-frequency radio in the shack.

With all the split-frequency operation you don't even need a transceiver
-
the best satellite receiver in my shack is a Collins 51J-4. Receives
RS-13
and RS-15 nicely all by itself, and I look forward to using it as an IF
with P3D. General coverage, so I don't need to stick to ham band IFs.

It also picks up the BBC very nicely, holds the bench down and keeps the
shack warm in the winter. :-)

This is certainly true, but for a simple 2400 MHz receive converter you
should use 432 as a first IF (or 144 if you really have to), not 28.

It will be difficult to get any image rejection at 2400 with such a low IF,
and while images may not be your first problem, they will double the noise
figure.

Hey , Thats pretty funny, But you know what the real funny thing is ??
Nothing is going to happen after april 15.... You could put ham radio
license on the back of morning Cereal boxes .... Just sign here, your an
extra ham and you would have NO takers. About the only thing thats going to
happen on april 15 is the already licensed hams are going to capitalize on
an easy upgrade...................

John ....

: The news release I saw said that once the system shut down, the
: satellites would be de-orbited; a nice term for "sent burning up into
: the atmosphere".

: Rick T.
: W7RT

Yep, another article says that as well.

http://dailynews.yahoo.com/h/nm/20000315/tc/tech_iridium_3.html

By Jim Wolf

[...]

Barring the last-minute arrival of a qualified buyer, the company plans to
begin ``de-orbiting'' the 66 satellites that make up the world's first
low-orbit system for wireless telephone service.

That means the network -- variously reported to have cost $5 billion to $7
billion -- would be vaporized as its satellites, bumped by their thrusters,
plunge from 485 miles above the Earth in flames over the ocean.

[...]

``They had the wrong product for the wrong market at the wrong time,'' said
John Logsdon, director of the Space Policy Institute at George Washington
University in Washington.

April, 2000, their designations and allowable modes.

Note: This bandplan has been endorsed by the C.B.R.L., Citizen
Band Relay League, Newington CT.

Band Frequency Allowable
Range(mHz) Emmissions

CB-160 1.8 - 2.0 Splatter Mode, Echo-mics o.k.
CB-80 3.5 - 4.0 Belching & Farting permitted on 3.950
CB-40 7.0 - 7.3 Splatter mode, 7.2 echo-mic calling freq.
CB-20 14.0 - 13.35 Jamming modes permitted on 14.313
CB-15 21.0 - 21.45 Noise Toys & Roger beeps ok below 21.250
CB-11 27.185 Restructured amateur calling frequency.
CB-10 28.0 - 29.7 Tweak your CB a bit more and you're there!

Profanity, insults, and Cursing are permitted if phrases like
"Extra Class" or "Morse Code" are used in the same sentence.

Discussions of a technical nature are rarely heard and prohibited.

I'm 10-7, 10-4?

See ya on the new Bands!

I realy find it priceless to blame the ARRL for restructing.
They did everything possible to stop from showing up at all, and when
it FCC decided to go ahaead anyway (which was something of suprise to
me) the ARRL put forth the best that it hoped it could get on Morse
Code, yes they failed to get it (thank the gods), but they did their
best for the code bigots

10-4 good buddy.

I have my 20kw diesel generator and my 5kw CB linear all tuned up and ready to go. It'll do 5 kw with a bag of sugar laying on the D-104 key all day long, while I play Eddie Arnold records. (gag)

I can't wait to burp, pass gas, work the action and fire my guns, and tell glorious stories of killing and dismembering cats to the retarded masses that will have one of these shining new licences like me! Heck I might even get out my comode 64 and have it swear in CW at 20wpm for all those code loving dirtbags in those elite areas of the band.

See you all there. Haw Haw Haw

I can agree to that, it still takes 5 wpm to get a ticket today on april 15
it still takes 5wpm where are the people beating the door down at this time,
dont expect to see them on april 15

You are absolutely right! OBTW, why the hell should I have to learn to use an arcane mode of communications such as CW so that I can use phone on 10M & 12M, which is all I really want to be able to do? Hell, even the US Navy dropped CW from their technical requirements for Communications Technicians! I am a technician perfectly capable of doing my own repairs and adjustments to radios. I have passed all of the trial tests for Technician and General. I was once licensed as a Broadcast Engineer back in the late '60s with an FCC Radio Telephone license. But I have tried and failed to learn code. So, I am probably more qualified than those idiots out there that passed the CW test but don't know Ohms Law! IT STILL SUCKS!

Ham radio will be better off when attitudes like this cease.
Honestly, whether you like it or not, get over it! April 15 will
come and go, you might find some new people to talk to on HF
but otherwise you probably won't notice much difference.

From what I read on these newsgroups, all the really badly behaved
ops are extras already!

Some young people might get interested and actually progress the hobby
forward in some way. Wouldn't that be amazing? Less people talking on
HF about their currentl illnesses, I'll look forward to that.

Funnier yet is what's happening right now. And it started over a
year ago, when the anouncement was made about the license structure
changes.

If you attend a VE session right now you will find that they are
pouring in to take the 13 and 20 WPM tests, because after April 15
they won't be able to any more. For many hams it's simply a personal
issue and they could care less that the need for these tests might
not exist a week after taking them.

When I heard about the license restructuring, in Dec 1998, I
decided that this was my last chance to prove to myself that I
could do it. It took 6 months of effort but I did pass the 20 WPM
test (with solid copy) and finally made Extra. Now, I don't care
if they change everything. I did it only for myself. I have been
loving Ham Radio for over 35 years and I don't intend to stop
loving it.

Well, so much for patting myself on the back.

The only part of the change that surprised me was dropping the
13 WPM requirement. I knew the 20 WPM test was going to go away
and I thought they might lower the 13 WPM test to 10 WPM, but
it seems I was mistaken. Go figure.

> You could put ham radio license on the back of morning Cereal
> boxes .... Just sign here, your an extra ham and you would have
> NO takers.

Will that be the box of Wheaties with the picture of
the Old Man himself, Hiram Percy Maxim, on the front.
I'll by a box even if I don't need to cut out the coupon.

> About the only thing thats going to happen on
> april 15 is the already licensed hams are going to capitalize on
> an easy upgrade.....................
>

If they are willing to venture into the CW portions of the band,
I'll be glad to talk to them. No matter how bad their CW might

be in the beginning. As long as they don't mind how bad mine is.

But, no matter, it's their right to choose what license they
want to obtain and where they want to operate.

No flame intended to anyone. Just another opinion.

Martin

Perhaps it would be better for those that wanted no kind of change ever again to the hobby/service to depart themselves, rather than see their beloved hobby depart....that way it leaves it for the rest of us who have a more realistic attitude toward change.

Unlike some extras on this newsgroup, he didn't do it for the
purpose of being worshipped by other hams - he did it for himself
which is exactly as it should be.

I somewhat see your point. Like anyone else, if you really want
to do something, you find the time. As far as what I accomplished,
well, I accomplished what I set out to do. That is not always an
easy thing to do.

Having over a year of advanced notice isn't exactly "rushing"
into it. I definitly had to think about whether I just wanted
to sit tight and wait it out, or just get it done. I know you
didn't ask, but, had I waited for the change to happen, I would
have upgraded the easy way. But, after all these years, it just
wouldn't seem the same.

It really didn't take that much time. I only studied the
code for about 15 minutes a day. It turned out a whole lot easier
than I thought it was going to be. And, no, I am not saying that
"anyone can do it", or that "If I did it, you can to". Because
some people just can't do it. For a while, I thought I was one
of them. And, it helps me accept all the other million things that
I can't do that someone else can.

Oh well, I think I generated enough noise on these news groups.
It's been nice talking with you.

You've never heard of learning for the sake of learning? Most amateurs
don't upgrade to prove something to others--most do it to prove
something to themselves.

Give me a break. Many Hams can't pass up the chance of waving
a piece of paper in the face of any one who does not also
posses that same piece of paper.

He meant CB-11 as in "11-meter band," not channel 11. Ham rigs aren't
channelized, even the 5- and 12.5-kHz-step V/UHF rigs read out in mHz.

Perhaps he is the sort of old-fashioned person who takes pride in doing
something that requires a bit of dedication and effort.

I'll never win any Olympic gold but, at age 55, I still run a marathon each
year.

It's known as personal challenge.

It's one of those things that, if you have to ask, you would not understand
the answer.

It gives a sense of personal accomplishment. Something similar can be
obtained by getting the ARRL CW speed endorsement stickers (I assume
that the program will be continued).

I don't know about you, but the things in my life that I appreciate the
most are the ones where I had to exert effort to accomplish.

Sure, and there are many CBers love to wave the fact that they can talk
DX without a license in the face of Hams.

There are such people in both groups. Most Hams and CBers just get on the
air and operate - and do not brag about what license or station power they
may or may not have.

Exactly. I will be getting my Ham license again, after a lapse of about
20 years. It will be the Extra Class license. I plan on spending just
about all my time in the CW segments. After all these years of not
being able to get my speed above about 10 wpm by listening to the code,
I am hoping I can do so by actual on-the-air practice. The Novice
bands were hopeless - few seemed to be able to manage over about 8 wpm.

It's called "bragging rights". It's nothing more than the ability to
tell a newcommer that you earned your license the "old way", which is
SUPPOSED to convey some sort of superior status over newcommers.

Strictly an ego thing.....

Dave

Probably not much. Neither one are worth bragging about.

The point is that anytime someone does something for the primary reason
of elevating himself up to a higher plane, wrt his peers, it's nothing
more than self-praise, a poor substitute for mutual respect.....

Dave

827. N1IR AND FRACTAL QUAD YAGI--THIS WEEKEND!

Newsgroup: rec.radio.amateur.space
Date: 2000-03-17 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000317170436.17333.00005062@ng-xe1.aol.com>
Source record: 9861

I'm happy to report that Chip (the ol' man himself) will be on this weekend on 10M with the Fractal Quad Yagi, working Europeans. He will be on about 1300 UTC somewhere in or near about 28490 to 28500 KHz. He will try (but no promises) to get on both days of the weekend so take a listen to see how that lil' fractal antenna plays! Usually he stays on an hour or so.

Background info can be found on the ham page on

http://www.fractenna.com

Chip's fractal antenna work has appeared in RadCom, Practical Wireless, World Radio News, 73, Communications Quarterly, Radio Revisita, Monitoring Times, QTC, Scientific American, Discover, Science et Vie, and many other magazines.

Hear and work the latest innovation to the world of antennas from Chip himself:-)

Dave, aren't we supposed to keep up with the Joneses? Aren't we supposed to envy his achievement so much so that we pull ourselves up to his new level? Which just pushes him to achieve even more than anyone else, making them even more envious?

Brian

829. Iridium shutdown

Newsgroup: rec.radio.amateur.space

I confess I am not a regular here, but I want to present a thought. Iridium is shutting down tonight at midnight. Plans are to deorbit the satellites and let them burn up. I am proposing that the SYSTEM and frequency allocations be donated to amateur radio for a world wide emergency communications system. Now, now, seriously, the big costs are all past. Labor for operating earth stations to perform stationkeeping on the satellites is the only ongoing expense, and that would be voluntary ham effort.

Ask any CBer that's clipped his modulation limiter and runs a kilowatt. I
guess they think that a so-called "10 meter" radio that covers 25-28 MHz
should be heard across its whole range! BTW, anyone have a used SW
broadcast transmitter for sale? 50KW should do it.

I am really getting tired of hearing about how bad HAM RADIO is going to be. I think it is going to be great. The worse thing that I can see is the mentality of some of those who are doing all of the crowing. But like it or not, change is coming my friend. Look at it as an oportunity and it will be. look at it as a problem and it will be. Why don't we offer to help the new people by making this a program of attraction. Set an example. Why not give it a chance ?

The only thing I see happening by all of this talk is that this newsgroup is going down the dumper

People don't realize this about the FCC: If they had *really* wanted
to "destroy ham radio", all they would have to do is to do *nothing*.
It plays right into a bureaucrat's natural desire for inaction.

Their R&O, on the other hand, is every bit a *hard* dope slap to the
bitter old meanies, including not a few of the ARRL, that change has
to happen to save their (and our) beloved service; it's an effort to
save us from ourselves.

I would not cry if some of these bitter old meanies departed us. Not
a bit.

Take care and 73's,

Dave

Only to those who are not going to be able to force Morse Code on to people, they will be quickly be made the fool of when it is entirely removed as a requirement in 2003.

They will also be quite amazed to see how Morse Code will take off and become more popular than ever in the second half of this decade when people turn to it as a fun nostalgic mode when it is not something that is forced opon anyone. No one wants to learn or do anything that they are forced to do "just because" someone said so. Wait and see how many people decide to learn it on their own once it is something to learn and do JUST FOR FUN! Wait and see!

I had to learn it "just because" I had to in order to talk on a microphone on HF. (as silly and illogical as that sounds) and never used it ONCE after getting my license. Once the code requirement is removed, I will be one of the first to relearn the code (have since forgotten all but 4 or 5 letters of it) and start using it once it is not a forced upon me like some rapist.

Burning up 60 or so new satellites is a ridiculous thought. They are not going to de-orbit them and they cannot be used for ham stuff. Even the old out of service satellites are usually parked out of the way and left alone, not sent to a fiery grave. Steve McCaw/Teledesic will probably buy the system and use it for high speed internet or something that might make a profit.

As was discussed in an earlier thread regarding Iridium, the only way Motorola and the rest of the Iridium partners can recoup any of their costs via tax losses and such is to deorbit all of the sats...

As far as ongoing costs go, the partners are over $4.4 billion in debt from operations.

Well, you certainly haven't been reading the news reports of the court proceedings, have you? Motorola wants to have a $6 or $8 Billion write off, and wash their hands of it.

Leaving stuff up there (as floating space junk) isn't optimal (long term).
Orbital debris is compounding at 5% annual rate. At this rate, it will
eventually lead to unfortunate/expensive accidents. It also incrementally
adds to the really tiny chance of a major space junk cascading collision
catastrophy as well.

One of the best articles I've found on space junk is at:
http://www.space.com/space/launches/spacejunk2.html

Some sites on Space Junk:
http://sn-callisto.jsc.nasa.gov/orbital_debris.html (Orbital Debris Research at JSC)
http://www.aero.org/cords/sdbasics.html (Center for Orbital and Reentry Debris Studies)

You don't get it. "Amateur" radio is already dead, it died a long
time ago. When the FCC came along and started to tell you what
"modes" and frequencies you could use, along with how
much power you can run...it really became something
that would never interest me.

I really couldn't care less about HAM radio.

Personally, I say screw Motorola/investors and a group of (anonymous)
individuals puts their own pirate sat up there to disable/hijack the
existing units. Yes, not at all practically possible, but it came to mind
immediately.

Then you'd support Joe and Charlie running 50 KW on the ambulance
freq's when it's hauling you to the hospital? Or the FAA freq's when
you're onboard an airliner at 35,000 feet. Or the Fire / Police freq's
when you're having an emergency ? etc etc ...

I don't think you've applied much thought to this matter.

Well..... I don't. I do what pleases *ME*. If I'm happy doing one
activity, then that is what I do. If someone else is better at it, well
good for them. I like to better myself for my satisfaction, not merely
to "look good" to other people. Only people with low self esteem need
the support of other people to feel good about themselves..

Dave

OK, now with all that beeing said about debit and taxes, did anyone TRIED to talk to them ?!? The idea of burning the whole stuff is redicolous, and I wish many HAM guys would talk to them to see first IF IF there can be anything done to donate it to the HAM community. TAX laws and stuff are there, but they can be changed and there are exeptions to them. I'm no specialist in any HAM stuff, in fact I do not know anything about it, nor I do know about tac laws, but I think it's up to you guys to at least TRY.

Imagine you guys 'own' a SAT network which is operated by individuals like you. Imagine the popularity Motorola gains in case this would work out. I guess they are open to new ideas if you talk to the chairmen. Imagine, you guys saved 1000's of life somewhere in the world during an earth-quake by making communication possible.

I might be just dreaming, but why not try.

Excuse my bad english, greetings from Germany!

Do you get your $36 back or do you get your life membership dues refunded? Does canceling membership just mean that you are not resubscribing to QST? What metric can be used to see if the radio relay league is losing or gaining membership?

Is there any connection between membership numbers and the ARRL BOD authorizing expenditures to hire a public relation firms to address restructuring?

Mike asked:
>
> What is the moral basis for Congress to force any person to set aside a
> specific portion of his earnings for retirement, whether it's Social
> Security or in a private account?

Because our society does not -generally- allow even foolish
old people to starve to death, those who do not save become
wards of the state in their old age, draining resources
and tax dollars from the workers who do save.
This is the moral basis for an enforced savings account.
Social Security is immorally administered and hideously corrupt,
but that's beside the point. The same logic covers things like
helmet and seat belt laws- people who refuse to wear helmets and/or
seat belts become medical welfare cases, wasting tax dollars
and increasing insurance premiums for those of us
who value our brains over our gonads.
I'm a Republican and a believer in smaller government,
but human nature must be accepted. These laws make sense.

Kind Regards,
D.S.

> I'm a Republican and a believer in smaller government,
> but human nature must be accepted. These laws make sense.

The key phrase: 'but human nature must be accepted."

Human nature is the one thing over which humans have control. We have choice, free will and the ability to decide to take responsibility for our own individual actions. That we generally do not, in this country, has been a function of the political wind. Which has in turn encouraged us to further abrogate responsibility.

The thinking that human nature makes laws mandating human behaviour necessary is contrary to the very concept of freedom. It presupposes that humans cannot accept responsibility for their action. It presupposes that the government MUST prescribe,and proscribe specific behaviours for the protection of individuals who cannot protect themselves. That thinking is flawed. The presumption is false. More insidiously, it presupposes that the bad feelings of tragedy can be avoided by restricting freedoms and choices, which is also false.

And tragically, by buying into the idea that any laws restricting freedoms are necessary, you support the thinking that's current in Washington that more laws will offer a better quality of life. And THAT's the big lie.

> THAT's the big lie.

Thank you for your thoughts, Peter, but I cannot agree with
your utopian assessment. We cannot base our actions on
what people *should* be, or *could* be, or *ought* to be.
We must deal with them as they *ARE.*

Many people _WILL NOT_ accept their personal responsibility
to the whole of society. These people cost the rest of us dearly.
Our culture shows no signs of changing back into one which
teaches and demands personal responsibility.
Unless and until society accepts means to weed these individuals
out of the stream, laws forcing compliance on all
are the only effective answer.

Perhaps I'm really a fascist without the racist overtones, Peter.
True freedom is impossible without personal responsibility,
and most people prefer to blame anyone and anything for
their lives, other then themselves. They mouth about
their freedoms, but in the end they actually want someone
else to tell them what to think and do.

Let us hope that, in the end, you are right and I am wrong.

Kind regards,
Dave S.

> are the only effective answer.
>
While you're right, that many people will not accept
responisibility,
that we simply abrogate the responsibility of the society to
protect
itself is not my point. Society has for the last two generations
entrenched in its citizenry that anything that was not
specifically
proscribed by law, was not only right, but virtually mandatory.
The
result is that laws have become necessary to enforce compliance
with
simple social courtesies, not to mention more significant
considerations.
The problem, ironically, is that in our efforts to become more
socially aware, and
sensitive to the needs of the individual, we abrogated our
responsibility
to teach, train, and encourage responsibility among our youth.
Once adults,

there is literally no way to get them to accept responsibility.
Not even
the pain of legal punishment. Even the law has no teeth to those
who do
not respect it. OJ Simpson but a single example.

Perhaps we've gone too far to recover. But we may, by being
less permissive and bringing back responsibility, eventually
obviate the need
for many of the intrusive laws that we now find ourselves saddled
with. Not that any laws are likely to be repealed. But laws or
not, we must return to personal responsibility if we are to move
forward as a civilization.

> Perhaps I'm really a fascist without the racist overtones, Peter.

Theoretically, fiber has a much greater bandwidth. So it is the
clear winner. In practice, fiber capacity has passed microwave
in recent years, so it bears out theory.

wrote:

> These people cost the rest of us dearly.

Actually, in most cases they don't. Smokers use less of the
health care system because they live shorter lives. In fact,
it's a total myth that smoking costs society anything. Hell, if
it weren't for smokers and the taxes they pay government would
probably come to a halt. (Well, not, but you get the idea.)

For every motorcyclist who costs "society" millions as a
vegetable from a crash without a helmet there are probably 10
cyclists who died from the crash without a helmet and cost very
little.

You have to look at the total effect and apply some risk
analysis. What happens if the person lives to age 75? What
happens if he dies early? Few people these days take the trouble
to look at the big picture. They look at Forest X and assume
that because 1/2 the trees are dying, that 1/2 of all trees are
dying.

Because amatuer radio is used to communicate with people all around the globle who don't speak the same language....
It is also a privelage to have a ham license just likeyour drivers license is a privelage...I am sure there are many driving laws you don't like either....

The problem with this idea is that these satellites aren't at all like ham satellites. Ham satellites are tossed into space and just coast around at will. These satellites are incredibly high-maintenance. They have to be oriented just right, they have to be kept spaced the right distance apart, they have to synch with each other and the ground stations... these aren't omnidirectional repeaters or transponders. I seriously doubt ANYONE in the ham community (or even let me go so far as to say EVERYONE in the ham community together) could amass the resources, time, and effort required to keep that constellation properly aligned, oriented, positioned, and synchronized to be of use. We aren't talking about simple machines with simple programming protocols. Sure, there are lots of folks who could "do it for one satellite", but with such a coordinated, interlinked constellation, would they have the time to do it for the whole fleet? And the way they were designed, e.g., to work as a fleet, would pretty much make any single satellite (or even a small subgroup of the birds) pretty useless for what they were designed for.

Would Motorola donate one or two of them for purely experimental (e.g., not "real communications") purposes? This indeed might be a workable proposal and might be worth pursuing. But don't be fooled into thinking that we could obtain the donation of a fleet of Phase 3D birds, because the Iridiums are as different from traditional hamsats as the internet's fiber-optic-based digital packet switching network is from a 2meter mountaintop repeater.

$0.02.

Sounds like amateur radio policy to me, Peter. If God knows exactly
what people will be freebanding on 10m next week, those guys have
no choice. If they chose to be good guys and not freeband, then God
would be wrong and we know God will not allow Himself to be wrong
so He forces those nasty freebanders to freeband against their will.
That's the problem with an omnipotent God. He doesn't have to be
omniscient if He's omnipotent. He just abuses his power so He will
never be wrong.

Another issue is their interference to radio astronomy. This had been an item of ongoing negotiations just settled last year with the astronomy camp having to accept large amounts of out-of-band interference for some portion of the day and Irridium sats to operate in some mode that reduced interference for the remainder.

Its one thing perhaps having some telecom giants threatening to litegate radio astronomy out of existance and its quite another thing having us do it...all just to envigorate our hobby.

Peter
WB2MJG and amateur astronomer (but not radio!)

Hi Jeff,

I have and ADI handheld and an Arrow for working SO35, AO27 and UO14.
This may seem rather obvious but anyway I didn't realise it at first so
here goes.
Try headphones or an earpiece, back off the squelch completely.
Adjust the volume so the hiss doesn't deafen you!!!.
When the sat comes over the horizon, the first thing you will detect is a
quieting of the hiss.
You can then rotate the polarity of the Arrow and move it slightly until
the quieting is
maximised. At this point you should start to recognise voices and as you
continue tracking the signal will improve.
AO27 has a very low power downlink and is much more difficult to hear than
UO14. UO14 is also operational at night AO27 is only operational during
daylight hours.
I cant tell from your request if you are correcting for doppler etc., so
send me email if you need more info.
Hope to catch you on the birds

From: Jeff Grey <cdma77@aol.com>
Message-ID: <38D9B7B3.4B4E@aol.com>
Source record: 9844

I am new to sats and I tried to "hear" uo-14 with my dualband HT and a antenna from Arrow for AO-27. I was tuned to the proper frequency and adjusted for dopp shift. I oriented the antenna with a compass and the data from a program called Winorbit. Is the sat shut off at night ? I am wondering if it is Winorbit ,since everything was set right. The funny thing is that I heard nothing from Uo-14. Any ideas on why I haven't heard the bird ? I am going to try to "hear" AO-27 tomorrow.

Thanks,

Jeff Grey

Hello I use Satscape The new version 1.40 You can get it at
http://www.geocities.com/net23_uk/ there is a link to the program there .
You can update keps one click from the net. You have to download the program
speechpac and One file all info and links are on the same page.
Thank you for your time The site is down at the momet.

AO-27 indeed is only active during the daylight hours and in the northern hemisphere only. The control operators have stated that the bird is available during the morning hours into the early afternoon. The reason for the daylight sked is to keep the solar panels illuminated to provide sufficient power for transmitting and to keep the batteries charged. Their goal is to prolong the life of the bird. Good luck!

Hello all, just getting back into the satellite stuff and was wondering if anyone had the pinouts for the Control jack on the back of the control unit? I'm trying to connect the unit to my Trakbox for automatic control. Yaesu does not have the info printed in the manual. (Stuff like the up/down pins, rotor position etc)

Thanks,

Larry W0FLY

Downloaded Satscape. The setup.exe installed some old dlls and then proceded to yield all kind of errors. The only way to continue was to click on abort or ignore. I should have clocked abort! The program will run (sorta), but is the buggiest 6%&*)(*& program I ever made the mistake of downloading. Oh well.... you get what you pay for and it was free. Now for the uninstall... Hope my other programs aren't affected by the system changes. Hate to edit the reg.

924. NOVA Demo

Newsgroup: rec.radio.amateur.space
Date: 2000-03-24 00:00:00 UTC
From: AnonMn@netscape.net
Message-ID: <38dae746.13654541@news>
Source record: 9758

Anyone had success running the observer setup with the NOVA demo?
Mine puts my observer location in the middle of the Atlantic Ocean when I put in 32.88 for lat and 96.68 for lon (coordinates for my location near Garland, Tx.) Another problem is that no matter which sats I select to be be viewed, the view includes only MIR and a military sat. Maybe the demo isn't really functional. The manual doesn't say. The demo description only says that the demo doesn't save configuration on exit. The program recommends Pentium processers. I'm running an AMD K6-II 350. ...Any ideas?

My InstanTrak doesn't work since Y2K unless the Keps are manipulated with a program to make a modification to them that IT will accept. Not practical.

That's not the problem Frank. The problem seems to be that no matter what
lon I input, the program will substitute 075 deg West in the view. This program
is cute, but not worth the effort to set up if can't set up a configuration that
is usable. The lat can be set, but the lon has some kind of problem that
I don't know how to fix and the manual doesn't help. I just wish that
InstanTrak would work with Y2K Keps without having them massaged first.

That is couragous. Unfortunately, the ARRL BOD doesn't care what we do. I think they would gladly kiss 500 good hams goodbye if it meant they could sign up 1000 CBer's. There were alot of good hams that threw in the towel and lost faith with the league when the ARRL presented their restructuring proposal. The ARRL used to be a good organization with solid beliefs, they even showed concern for issues that were on the minds of non league members. I don't know what caused them to change, maybe it is just that they're to close to Washington D.C. and the liberal limp wristed Clinton Administration or Rep. Barney Franks home district and eight years of liberalism has rubbed off. One guy said he was going to cancel his ARRL life membership but I don't know if he ever did.

Hopefully you'll cancel your ISP connection at the same time?

Hmm, what is the Usenet name equivalent of a lid who splatters across
frequencies (newsgroups)?

Please exclude rec.radio.scanner in future.

Ron of that ilk.

939. HELP with WISP & KCT

Newsgroup: rec.radio.amateur.space
Date: 2000-03-26 00:00:00 UTC
From: Bart Berg <bberg@uslink.net>
Message-ID: <38DE1558.8662CCCC@uslink.net>
Source record: 9773

I am getting back on PACSATS trying to go from my old Win31 system to Win98.

I have WISP up and running but it won't drive my FT736R or the Yaesu rotor system thru KCT.

The SATDEMO program will drive the antenna but only partially works with the FT736R. It will set the Rig into the CAT mode and will change the modes (FM - CW- SSB) but will not change the frequency.

Has anyone had any experience with these problems ???

Thanks

Bart K8IRC

I believe there is a bug in the FT736R firmware. You cannot change the
bands through CAT unless you have 3 band units.

So, you need to set the correct bands through the frontpanel before you run
your PC program (does not matter what program you use, it is a problem in
the transceiver)

I care! What is an obselete mode? What is an obselete test?
And what are obselete values! I don't have any grey hair.
Old is a relative term. However, I am in my 40's. I took my exams at an FCC office and still believe all exams should be given there. Ham radio took another step back when the VEC program was born. To many people get their license or upgrade because they have friends who are VE's. Ham radio took another step back when the no-code license was born. And now with the new license restructure, the hobby has move backwards even further. I don't have a VE badge to send back to ARRL but I can understand why people are doing it. I for one don't need a radio club from CT to speak on my behalf. They put out some nice books but , in my opinion, that is all they are good for.
Currently I have an Extra class license and I have it so I can work the lower 25 of the CW band.
I work ALL amateur radio frequencies from 160M to 23CM and use ALL modes, not much voice though.
Yes I do care the way our hobby is being flushed down the gutter buy the FCC giving in to people who don't want to work for their license and getting something for nothing!

>Old is a relative term. However, I am in my 40's. I took my
>exams at an FCC office and still believe all exams should be
>given there. Ham radio took another step back when the VEC

Are YOU willing to pay for the extra expense involved?

>program was born. To many people get their license or upgrade
>because they have friends who are VE's. Ham radio took another

That happened long before the VEC program was started.

>step back when the no-code license was born. And now with the
>new license restructure, the hobby has move backwards even

Times change. The hobby must change with them, or die.

>further. I don't have a VE badge to send back to ARRL but I

Understandable, since you lack even the courage to post with your name
or callsign.

>can understand why people are doing it. I for one don't need a
>radio club from CT to speak on my behalf. They put out some nice

Who's going to do it, then? I admit they do a lousy job, but they're
all we have. If folks like you would get involved and run for League
office, or at least vote, things would change.

>books but , in my opinion, that is all they are good for.
>Currently I have an Extra class license and I have it so I can
>work the lower 25 of the CW band.

In that case, the new rules will affect you NOT AT ALL. So what are you
whining about?

>I work ALL amateur radio frequencies from 160M to 23CM
>and use ALL modes, not much voice though.

So?

>Yes I do care the way our hobby is being flushed down the
>gutter buy the FCC giving in to people who don't want to

>work for their license and getting something for nothing!

Yawn.

since the option was either a VEC type of program or no licensing/rare licensing...which do you think is better for the service?

for this part of the world, the VEC program means you can take the test locally instead of having to drive to tampa or miami in the middle of the week.

seems the enforcement guys and gals discover questionable exams on a regular basis. if you have proof of fraud or cheating, please do pass it on to them.

I have problems with both frequency tracking and rotor tracking.

FT736R problem:

Wisp95 will set the radio to CAT but will not change the frequency.

Rotor Problem

Wisp will not drive the rotors to track. Wisp window does read and indicate the correct rotor position. Wisp parks the rotors at the end of a pass.

The SATDEMO program will drive the rotors OK but will not change frequency on the FT736. The program will change the modes (CW-FM-LSB-USB)

Hi,
I'd like to know what kind of use is done with that kind of frequency.
Whta kind of equipement use this frequency or frequency ⍰1 ghz. Thanks to help me in my research .

Why are you only now asking that question? Why weren't you asking that
during the last 5 or 50 years in which the NCTA were whining?

As hams we are sitting on billions of dollars worth of frequency space.
If the hobby continues to be vibrant and growing, continues to provide
valuable
public service, continues to attract new energetic young hams then we
will keep the
frequency space. If it becomes a narrow backwater then all of that is
at risk.

Times change, ham radio was once considered to be a technology leader.
If we can not keep that spirt alive then we all loose.

I've held my Advanced class license for almost 20 years.
I too took my first ham exam(s) at the FCC office.
I long ago stopped opperating on HF, as I could not handle the rudness
and
mutual spitfulness that regularly occures on thoose bands.

I've recently become involved with radio again through APRS and the
digital modes.
It is a fresh new environment, I've seen a number of new engineer/Hams
attracted by the new technology.
CW is an old mode, and it is hard to explain why knowing CW is more
important than knowing
something that is directly applicable like DSP programming.

I agree that making it too easy to get a ham license threatnes to turn
us into CB'ers,
but It would be politcally impossible to create a realistic useful exam
that the OT Extras
could not pass.

How many of the you old CW fans could build a modern DSP IF or even
dicuss it's basic operating processes?
How many have written even one line of code! (programming, not morse!)
I believe that you should all be retested to make sure you are current!

I for one am glad to see that the hobby can continue to grow and be
useful.

I apolgize for any insult I may have caused thoose that are old time
hams and
truely do operate in todays technology. You should know that this rant
was aimed at the people
who oppose progress rather then thoose that foster it.

Paul (Kl7JG)

Some endurance-explorer atheletes may lose communications link
when Iridium shuts down. Info from latest comp.risks posting.

Dale Skiba
W0BOT

Date: Thu, 23 Mar 2000 7:55:01 PST
From: "Peter G. Neumann" <neumann@csl.sri.com>
Subject: Iridium insidium

Jo Le Guen, the Frenchman who is rowing solo across the Pacific, six weeks
into a four-month trip from NZ to Cape Horn in Chile, in hopes of raising
awareness of the plight of our oceans.
[http://www.wired.com/news/print/0,1294,35077,00.html]

Rune Gjeldnes and Torry Larsen, two Norwegians, are attempting to be the
first known to ski from Russia to Canada over the North Pole.
[http://dailynews.yahoo.com/h/nm/20000320/tc/iridium_norway_1.html]

What do they have in common? Both efforts may lose their communications
lifelines when the plug is pulled on the Iridium satellite network at
midnight on 24 Mar 2000, after Iridium LLC failed to be rescued from
bankruptcy. However, Motorola will attempt to keep the network running in
remote areas "for a limited period of time." Le Guen gets his weather
forecasts from France, and talks with his doctor. (He has some alternative
modes of communication, but with practical restrictions.)

[Thanks to Mark Brader and George Mannes for the source material.]

Because the NCTA was asking for change and they got it. Now the
PCTA is asking for that change to be undone, i.e. a step backwards.
Eliminating the med/high-speed code requirements was "getting on"
with the hobby. Going backwards certainly would not be.

Yet another article, this one on an open source movement to raise
money to buy out the satellite system...

http://www.salon.com/tech/log/2000/03/23/save_iridium/index.html

[...]

Thursday morning, the three longtime friends, who are systems administrators
and network architects, launched the Web site for Save Our Sats, a
yet-to-be-incorporated nonprofit that hopes to raise money to save the
apparently doomed satellite network Iridium. Just Monday night they hatched
their rescue plans, where else but in a chat room.

[...]

In the unlikely event that Save Our Sats does quickly raise hundreds of million
of dollars for the cause, the organization would operate as a nonprofit on a kind
of public television model, in what they call, in the loosest sense of the term
-- open source. The organization would be collectively controlled by
thousands of members and volunteers with no one company or person owning
a controlling interest. Members would receive a discount for Iridium phone
service, which could also be used for global Net access, albeit at 9,600 baud,
and any other purpose the collective genius of the owners could dream up.

[...]

I'm new to the sattallite thing and I'm looking for suggestions. Are there birds I can use on VHF/UHF FM without the need of a warehouse supply of 13B2's and a nuclear power station to run the rotor system? Something i can use on a dual-band vertical with 25 watts? Also, are there any birds listening on 6M SSB, and if so what freq?
Thanks,
Dan - KF4LNE

Try SO-35 aka Sunsat 35, a South African imaging sat. with basically a
cross band repeater on board, check it at...

http://sunsat.ee.sun.ac.za/

I am working it easily with 25w and vertical, UO-14 is also available,
much the same as SO-35, FM VHF up UHF down. Great fun, check 'em out!

Since neither program will work, your problem is with the KCT board,
the only part common to both.

Try different I/O address ranges on the KCT. They're not plug and play,
and if you get it wrong, they get very confused. Double-check the
interface software. If in doubt, reinstal.

Since some of the 736's CAT functions work it's probably OK, but
you might want to test it just to make sure. There are programs
kicking around, and the manual provides protocol details.

Got it from the ITU some years ago. Can't guarantee that
it is fully up-to-date.

You can get a chart from the RadioCommunications Agency.

I'm sure there must be something on-line somewhere if you
want to search for it.

Shortwave magazine- July 1999 gave an excellent freq. spectrum chart wall
poster
away with the magazine-
which covers 5kHz to 50GHz .
You could try and get a back issue-
must be some still available if you get a March/April 2000 edition-
The info for back issues should be in there-

hobby (hï¿½bï¿½ï¿½) noun

An activity or interest pursued outside one's regular occupation and
engaged in primarily for pleasure.

Part 97 specifically says that ham radio cannot be used for commercial
purposes. Hence, it falls under the above definition of a hobby.

NO NO NO NO NO. It was asked where in PART 97 does it say 'hobby'.
Can't find it? Because it is not there. Hobby is 'your' definition
but not the FCC's.

The question was a straw man. Not every detail about ham radio is
spelled out in Part 97. Since the Part 97 makes it OBVIOUS that ham
radio is an avocation (hobby) rather than a vocation, there is no reason
to spell it out. Anyone with a funtioning brain (yes, I know this
excludes many hams) can figure this out without for himself.

I can certainly understand the emotional feelings and attitudes of the many hams who have DONE IT THE HARD WAY, whether this was CW at 13/20 wpm, or driving 150 miles to the FCC Field office to take exams, or whatever. ONE SIMPLE QUESTION. When will it get through your thick heads that this IS NOT THE ISSUE? A lot of hams did it this "hard way", and no one is criticizing them for having done it. But unless something had massively changed in the hobby, it was doomed to go down the tubes. I don't see how so many can be "blind" to this reality.

What responsible governmment (or businesses) is going to sit around when spectrum is at a premium, amateur radio is not growing, and the on-air behavior of the "old and wise ones" is embarassing to all. If you haven't studied a frequency chart recently, you ought to do so, and NOTICE how "generous" the allocations are for Amateur Radio. If you think these weren't vulnerable under the existing conditions, then you are grossly out of touch with reality.

For those that are upset with all the changes and restructuring, it appears to the rest of us that you would have been content with no changes for the last few years of your life, as the hobby dwindles, and then if it all folds after your "passing", then so what. That appears to be what the underlying attitude is, and if so, it is about as far removed from the "spirit" of Amateur Radio, as you can get.

Also, if you were of the opinion that the hobby was going to grow under the previous conditions, think again. The world has changed. Interests have changed. The Internet, in a way, is the more practical "ham radio" of today. Available, free-time is scarce, and the vast majority of established hams (20+ years or more in the hobby) are so grossly out of touch with young people today, that there is nothing they could do to bridge the gap, let alone generate new interest. I think many younger hams saw the same problems/options/opportunities that the ARRL/FCC saw, and that was we had to make changes, adjust to the times, or lose it. Plain and simple.

BOTTOM LINE. It doesn't make a hill of beans difference whether anyone likes or dislikes the restructuring. It's here, it's going to stay. Many believe it was a step that will help Amateur Radio survive/move forward for the time being. Other changes will probably follow. I am certain that all older, current, and future hams will be able to still enjoy what Amateur Radio offers. And, if you think you have to do something drastic to express your discontent, go ahead. It will have NO EFFECT on ANYONE, no one will care, no one will listen to you, and if you decide to depart from Amateur Radio (one way or the other),

probably no one will miss you. Why? Because you spend your whole time looking backward. LIFE, and Amateur Radio, are about LOOKING FORWARD.

Anyone know why the NOVA demo won't accept observer settings ? It is supposed to and seems to work for some people with no problem. It always reverts to another location when showing the map. When I go back to the setup, it has changed from my settings. I have uninstalled it for now. Maybe reinstalling it will help.

Hi folks!
Over 5 years ago, I used to use Oscar 13, and the RS satellites.
I used a beam without elevation, and worked 13 when it was low to the
horizon.
I want to get back in to it.
I understand 13 has fizzled, and Oscar 10 is not feeling too well.
I am going to get an AZ-EL rotor, but was wondering if
cross polarized antennas are worth purchasing?
Will they be helpful at all with P3D?
If I get a Kansas City Tracker,
should I get the tuner as well?
I have Icom 275H, 475H, and 575H. I would have to get the computer interface
for the rigs, but already have the satellite interface which slaves one of
them to the others' tuning. Can the tracker and tuner keep up with the
faster speed of an RS bird whizzing by?
I used to use InstantTrack on my 386, but have ordered Nova for us on the
new 'puter.
Thanks all, I could sure use a satellite elmer to help me re-familiarize
myself with the current goings ons of satellites.
Regards....Dave

Yup.....dream on...But you better check out the reports from the
sources...Things burning up in our atmosphere is NOT exactly an
infrequent event ..tsk...Actually it would provide many good VHF
scatter openings like suggested in some previous posts.
Cheers
Eric/VE3RUE

Peter:

An exceptionally excellent point to add to this discussion. At least digital transmission
modes can have their signatures recorded in some kind of ever expanding archive

of manmade UHF + signal /RFI sources...

Eric/VE3RUE.

>I am going to get an AZ-EL rotor, but was wondering if
>cross polarized antennas are worth purchasing?
>Will they be helpful at all with P3D?

To know that, you will have to wait for the launch.
Usually (for 10 and 13) the claim from the builders is that the sat
has circular polarisation itself, so you could use linear antennas and
live with a 3dB signal loss.
However, in practice the polarisation turns out to be not really circular
(especially with Oscar 10, which had a collision with the launch vehicle),
and using circular polarisation on the ground will reduce the fading
due to the spin of the satellite.

To know how it will be with P3D, which has circular antennas as well but
also has a lot stronger signals (so a small loss and a bit of fading
isn't that critical), experience will be needed.

>If I get a Kansas City Tracker,
>should I get the tuner as well?

Not really required for P3D. But it can be handy for low orbiting sats,
especially when using packet radio.

>I have Icom 275H, 475H, and 575H. I would have to get the computer interface
>for the rigs, but already have the satellite interface which slaves one of
>them to the others' tuning. Can the tracker and tuner keep up with the
>faster speed of an RS bird whizzing by?

The ICOM line has a clever interface bus (CI-V) which allows all three
transceivers to be controlled using a single serial port and a level
converter (MAX232). That is what is in the computer interface. You can
make it yourself for a couple of dollars.
Same goes for the tracker: a $10 circuit can be built that is a technically
more sound solution to tracking than the KCT (which has a serious design
mistake that can kill your rotators when they don't have end-switches).

The control of the transceivers and the tracking can be done by the main PC
using only a single COM port: RX/TX data used for the tuning, RTS and DTR
used to control an AMSAT-DL tracking interface using bit-banging. I don't

know if Nova supports that, you will have to check the specs.

Auto-tuning is really useful when you work single-channel sats, like the pacsats and the FM repeaters. The frequency can be unambiguously calculated and is OK when it is within a couple of KHz. On a voice transponder using SSB it is less useful, as you have to decide which frequency you want to be constant (rx/tx/position in transponder), and have to rely on the other end agreeing with that assumption. Furthermore, you want to be correct within about 100 Hz. Sure it can be done, but most hams will have their fingers on the dial anyway.

Tracking a low orbit satellite is usually no real problem, except on overhead passes. The rate at which the satellite passes can be near to or greater than the rotator rate, especially when the azimuth rotator goes through its end stop and has to rotate all the way round to pick it up again (this can be avoided when your elevation rotator can turn the full 180 degrees, usually no problem for the rotator but your cabling has to be laid out carefully to deal with it).
Also, you will need a source of correct time when you want to track accurately at those moments, as a few seconds of error on the clock will mean a large offpointing of the antennas.
But, the time spent in this critical area (say, above 60 degrees elevation) is so short that it won't really hurt when you haven't got this perfectly sorted out.

I don't know of any single source. But, you may want to try the
following places for advice:

news:rec.model.rockets
http://www.rocketryonline.com

RocketryOnline has a discussion area (with an electonics section) and
loads of information and links to vendors and other rocketry sites. I
know there is at least one vendor that is selling a telemetry system, so
the knowledge is out there...

Good luck

Who cares if it is a hobby or a service? I do not participate in any service aspect and have had my license revoked in 30 years. I guess the FCC must see it as a hobby. Besides other services have been eating away at Ham radio spectrum for years to provide their services for a fee to the public.

Let's face reality of the two basic truths about mankinds endevors:

1. MONEY TALK AND BS WALKS

2. "THE GOLDEN RULE" - He who has the gold makes the rules

So who cares about all the inane arguements any way as the FCC and people with bucks will do what they want without everyone elses consent!

Matt,

Being a long time ham and rocketeer I will agree with Craigs URL recommendations. There are lots of places that have electronics packages for model rockets...Altimeters, with parachute deployment outputs all the way up to full recording flight computers. Beacon transmitters can also be found.

For your project you would do well to look into interfacing some of those into a packet telemetry system. Your'e also looking at larger rockets...most of the products available are geared towards "High Power" rocketry (H motors and bigger). Systems with the kinds of capability you mention will require a fairly good lift capability.

If your'e not already familiar with the rocketry end of things see if there's a club nearby, NAR or Tripoli.

I have for sale a DSP-12 Multimode communications controller from L.L. Grace Communications Products, Inc.

This unit is used mostly on the amateur satellites such as UO-22, KO-23, KO-25 TO-31, AO-16,etc.

Many modems are available in this unit, VHF packet, HF packet,PSK and FSK for high speed packet and satellite work, RTTY Baudot, RTTY ASCII, ACARS, and other test modes.

Three analog radio connectors. RX & TX can be split in any combination. It can do multi-tasking operations and has built in packet mailbox.

This unit has the one megabyte RAM expansion, Date/Time clock backup and the 8-channel telemetry/experimentation options.

Comes with DSP-12 users guide, computer and power cord.

Price $315 shipped COD USA.

You may email or call me at 606-273-1611

Thanks Dave. This might have been what I was missing. The software has
been uninstalled, but I'll download it again and check to see if this fixes the
problem. The program appears to have better graphics than others.
I still like InstanTrak though.

"Vincent Fiscus, KB7ADL" <vlfiscus@mcn.net> went on a illucid tirade in msg news:sej69tg3eop156@corp.supernews.com...
> Code haters say that CW is out dated and digital is all that matters in order
> for ham radio to move forward, but you code haters are a pack of fools and
> lack the ambition to move ham radio forward and accomplish something. ...

Narrowminded Grandpa Vince (troll) can only react as typically happens in situations like this, he feels threatened, feels that he is losing something, and has to defend since he lacks the intelligence and self-awareness to see alternatives. Human nature is pretty consistent, we hate change and fight anything new or different, from wanting to hang onto the "world is flat" theory, to having organizations like the KKK to "protect" our racial purity from "infiltration". His mindless ramblings are just another form of "there goes the neighborhood, undesirables are moving in", or "the sky is falling". The more we evolve past the blind pre-programmed, inherited behavior of humans as animals, the more we can move forward and see other options.

As an Extra, I would like to have some distinction between an Extra that had to earn his stripes under more stringent requirements and the new Extra "Lite". However, I see the dropping of CW as a positive thing to allow others to use modes that the majority uses anyway and that they are restricted completely from now. I also realize that my wanting to have something like an "Extra Plus" is also purely a human frailty, I want the recognition.

Once again, I offer this for entertainment...

Once again, prevailing thought has called upon the canned HAM to respond. In light of the recent FCC testing requirements changes, those self appointed to protect our rights have used the airwave soapbox to decry the injustice of it all. A recent satirical "test" was passed around, but the CannedHam used his ample snout to root out the "real" test and found this ripe truffle. He presents it here for your pleasure:

Fred
N4IXL

FCC EXTRA CLASS LICENSE EXAM

1. A change long lobbied for is announced by the FCC, do you:

a. complain miserably on every band for which you have access
b. stock supplies in preparation for the obvious end of the world
c. make sure everyone knows how hard things were when you first became a ham
d. all of the above

2. Proper testing procedure should include:

a. the ability to solve a triple integral equations and Fourier transforms
b. the design and construction of an entire HF rig using tubes
c. the ability to send 30wpm cw using a foot paddle while standing on your head
d. all of the above

3. The FCC moves to another letter in sequence denoting new hams, you must:

a. Listen for the new calls and let them know how long you have been a ham and that you are a higher class
b. Coordinate with your buddies to not respond to these "appliance operators"
c. Make sure to "educate" all the new calls as to the proper procedures of being a HAM according to you
d. all of the above

4. When you received your license it also gave you which rights?

a. omnipotence: your opinion is always right and there is no room for other, obviously wrong, views
b. your fringe interest such as QRP, CW, ATV, APRS, etc. must be imposed on others
c. to post and say controversial or extreme views and expect no dissention or debate
d. all of the above

5. HAM radio should always maintain the same set of rules since Marconi because:

a. You had to do it, so should everybody else
b. We wouldn't want to ruin the neighborhood by letting all those lazy CB rejects into the hobby
c. You can't possibly be a good HAM radio operator without an EE degree and 20wpm code skills
d. all of the above

6. A good way to assert you opinion is to:

a. say and write vile right wing diatribes but laugh or put a smiley on it and say is is a "joke"
b. hang out only in groups of people who believe as you do to reinforce your opinions
c. let everyone know that it is not an opinion, but rather a fact and only an idiot couldn't see that
d. all of the above

7. The HAM radio motto is:

a. intolerance, self-righteousness, arrogance
b. exclusion, close-mindedness, bitterness
c. conservatism, the Klan, the NRA
d. Veni, Vidi, Vinci

8. The recent "proposal for change" in rulemaking has asked for the following:

a. reciting 500 memorized stories, chants, and formulas in a dark, candle lit room to 12 hooded elders
b. electric shock therapy for any question missed regarding Q signals or pro-signs
c. skills test showing the ability to solder 50 surface mount components in 5 minutes
d. proficiency in setting up a remote mountain top station using magnet wire, chewing gum and burlap

9. The proper way to maintain your skills as a HAM are:

a. troll newsgroups and nets to learn clever catch phrases like "appliance operator" and "codeless tech"
b. get on 2m repeaters and use Q signals like "QTH" and "QSL", and terms like "ROGER" and "OVER"
c. put down others so that you can appear to be above them without actually having to elevate yourself
d. all of the above

10. When you first became a HAM radio operator

a. You aced all exams without a missed question, could send 30wpm CW, and built all of your own equipment
b. You had to walk 20 miles in a blizzard, at night, with a broken leg to take your tests at the FCC office
c. You didn't have to worry about those damn parasites that didn't have to pass a code test
d. Marconi was still a Novice

The "Canned" HAM

I have numerous quotes from my 1930's magazines on how ham radio was getting worse and worse and was going to die. The more things change...

>You'll get alot more enjoyment from ham radio knowing and
>using CW than you can without it.

A simple solution Vince. Simply use only CW. A number of ops are doing that these days. Those awful new codeless hams won't be able to bother you... (Unless you keep hanging around these newsgroups. But heck, that's what makes the place fun. And that's why you stay here isn't it. Cmon, admit it...)

This newsgroup seems to be populated by two distinct groups - bitter
old men, and snot-nosed teenagers. Where's the middle aged firmly on
middle ground?

I'm 40, and just passed my Extra. I could have passed 4B and waited
til April 15, but I did 1C the old fashioned way because it gave me
satisfaction. It did NOT make me a superior being...

I support the restructuring because it was necessary for the survival
of ham radio at a time when "under-utilized spectrum" is being auctioned
off to the highest bidder. I enjoy operating CW, but as anything other
than a nice, quaint pasttime, it is obsolete (i.e. not used commercially
at all anywhere).

Many of the smartest E.E.s I know are Techs, while some of the biggest
buffoons on the air hold Extra tickets. Obviously, the ability to copy
20wpm Morse code has done nothing to "weed out" morons, and it is
certainly no measure of operator "class"!

I'm 47, have BA, BS, M.Ed., Ph.D, extra call for many many years, lived and traveled around the world, speak two languages (curse in neither), and I'm not an ounce better than anyone else in any way. I have been able to take advantage of opportunities that others have provided. The restructuring will provide opportunities for many. I just hope that most get beyond the "hardening of the categories" and encourage the hobby to grow.

1037. 6 cm hpa's

Newsgroup: rec.radio.amateur.space
Date: 2000-04-05 00:00:00 UTC
From: Tim Wilson <tim@cmwave.com>
Message-ID: <38EB5DDC.BDF6BC4F@cmwave.com>
Source record: 9671

FS quantity 4 Varian vzj2700d4 3kw klystron hpa's. complete and operational with solid state ipa's and 80 dB of gain. wr-137 input and output. 20 dB manual attenuator. 208 volts three phase. Full metering: beam voltage, beam current, body current, reflected power, forward power (4000 watts), drive power, filament volts and current, beam and filament hours. Many spares including klystrons,
filament and beam transformers, 3 phase autotransformers, meters, wiring harnesses, and more.
These amps have either 12 or 24 channel tubes and will make >3kw across any 40 mHz. bandwidth.
Higher power outputs are easily obtainable with reduced bandwidth tuning of the klystron. The tube is a Varian va936 series, 5 cavity. Typical operating parameters are 8kv@1 amp with PO about 3 kw. I
have operated the amps at 8.5kv with output near 4kw. The beam power supply is variable from about 4 kv up to about 10 kv. The amp has arc detection and shutdown, as well as an output isolator.
For more specific information please e-mail or phone. SERIOUS INQUIRES ONLY! THESE ARE NOT TOYS!

1043. QST--FRACTAL ANTENNA CHALLENGE--QST

Newsgroup: rec.radio.amateur.space
Date: 2000-04-06 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000406023923.01080.00000134@ng-cr1.aol.com>
Source record: 9677

QST--

Chuck O'Neal, K1KW, has issued a challenge to compare his 10M linear loaded antenna with the 10M fractal quad Yagi (FQY) seen on the ham page of:

http://www.fractenna.com.

The specs on the FQY indicate at least 3 dB gain compared to a dipole (in the same environment) and better than 20dB F/B. Impedance is close to 50 ohms, with no matching whatsoever.

Chuck's linear loaded antenna will have the same turning radius. Specs are not known, but Chuck contends that 'fractals are linear loading' so this should be interesting. [BTW, fractal antennas are certainly not linear loads any more than a nonlinear circuit is linear.]

On the air comparisons with DX are not scientific. That's what the specs are for. But it should be fun to see how these two antennas 'play' at the same heights, with very similar types of locations (separation about 20-25 miles LOS) and get comparison signal reports.

You are invited to hear this challenge on the air.

Plans are for Chuck and I to operate N1IR and two other local ops to operate from K1KW.

Tentative date is May 13, 2000 on about 28500 KHz. Time TBA but probably about 14 or 1500Z. Propagation to Europe is a requirement; a 'raindate' will also be posted.

Please pass this along to any list, buddy, or NG you feel may enjoy knowing about this.

73,
Chip N1IR

1045. NEED HELP !!!!!!, CAN'T HEAR UO-14 !!!

Newsgroup: rec.radio.amateur.space
Date: 2000-04-06 00:00:00 UTC
From: "cdma77@aol.com" <cdma77@aol.com>
Message-ID: <38ED688B.970@aol.com>
Source record: 9679

I am new to satalites and I was wondering if anybody could help me solve a problem, I am not able to hear UO-14. Here is my config :

Kenwood TR-851E, 70cm multi-mode radio tuned to 435.07(+-10khz)FM when the sat is supposed to appear for Doppler shift and the squelch is open

Arrow A0-27 antenna on a camera tripod, aimed with a compass according to the pass

20ft coax run between he radio & antenna

I will be getting a 2mtr radio soon for the uplink and I am just trying to hear UO-14. I am using a copy Winorbit for tracking with new Keps. I have tried moving the antenna to make sure my that my aim may be wrong, but I don't hear anything. I am getting very frustrated ! I haven't tried to hear AO-27, because of my work schedule and the satellites availability. Do you know of anybody in he St. Louis MO area that may be able to give me some hands on help ?

Thanks,

Jeff Grey

Jeff: if its any consolation, I am not hearing it very well myself. I have made a few contcts through the bird but only when it is almost directly overhead. It is in noway comparble to the signal strength of the SO-35 or AO-27. Of course these two birds downlink on 2 meters instead of 435. I suspect my antenna is the probelm on hearing the UO-14. I am using just a 440 ringo ranger and/or a discone on my Icom R-7000. I am also using an Icom 471/271 combination on up/downlinks. My two meter uplink antenna is an Cushcraft 2 meter turnstile, or crossed dipoles which works really well. I feel that my 435 antenna capability is my problem in hearing UO-14. I use NOVA and Instantrack for tracking. I wonder if you have made the Y2K corrections for Instantrack? By the way I have a turnable array for 145/435 satellite work that I am restoring along with mast mounted Icom pre-amps. I am looking for an AZ-EL rotor to complete that project. I would be interested to hear how things turn out for you. Pat K4AVO

From: Peter Hodgson <va3pkh@rac.ca>
Message-ID: <38EDD6BB.726C020A@rac.ca>
Source record: 9681

Hi Jeff

A can suggest a few of things to try.

Start at 435.080 and work your way through .075, .070, .065, .060
as the satellite progresses it will probably be easy to determine
the best time to change as the signal distorts.

Try without the tripod to start with, use headphones, and move the
antenna
in the direction that Winorbit shows the satellite is approaching from.
You will hear a quieting of the background hiss as the sat approaches.
Don't forget that the Arrow may need rotating as well as pointing to
allow for
polarization of the sat antenna as the sat rotates.

Make sure you Winorbit is set correctly and that your time zones etc.
are
set. Winorbit can show passes in local time or UTC at the moment here in
the east we are UTC -4:00 hr. I am not sure about St. Louis.
I usually do not hear anything until 2 to 3 minutes after Winorbit's
prediction of AOS due to the horizon not being in line of site at
my location Belleville Ontario FN14.
I have spoken to KB0NWT Dave Newman several times on SO35 and UO14
he is located in FN30 Memphis MO. I don't know how close that is to you.

73
Hope to hear you soon

Information List Server. This system is
operated by George Race - WB8BGY

To be removed from this mailing list please
send your request to: WB8BGY@ARRL.ORG

It is me again, having to come to you a second time in the same day
with a request for help.

Please see if you can get the following information on your Nets as
much as possible during the next week. This is particularly important
to the Northern Ohio, Michigan, and South Western Canada areas.
Anything you can do to help will be appreciated.

73...George Race - WB8BGY
ARRL Great Lakes Division Director

HERE ARE THE DETAILS OF THE ANNOUNCEMENT

I have received word from Gerald Rosner, N8FGK, that the Grosse Pointe
Woods Hamfest, scheduled for Sunday April 16th, 2000 and sponsored by
SEMARA has been officially cancelled. The Hamfest Committee met late
Friday, April 7th, and made the decision. Lack of advance table sales
and Dealer participation was at the heart of the decision.

The Officers of SEMARA are sorry to have to cancel this formerly
popular Hamfest, but needed to take necessary action to cut their
losses to a minimum at this late date.

George Race - WB8BGY
ARRL Great Lakes Division Director

Your Great Lakes Division Leadership
Director - George Race - WB8BGY@arrl.org
Vice Director - Gary Johnston - KI4LA@arrl.org

Please let us know if we can be of service to
you or your Amateur Radio organization.

When I renamed Keps downloaded from Amsat to whatever.kep using
Windows it didn't actually rename it properly.It was still
whatever.txt.I had to use DOS command line to rename it.
Also NASA's J-Track 3D web site could be used to compare tracking
results.

Switch off the "hide extensions for known filetypes" option in the explorer.
It only serves to confuse you.

Radio Meteor Observation Bulletin No. 80 April 2000

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: Biedenkopf C2 TV, Video Frequency 48.250 MHz,
ERP 100 kW, Azimuth 90 +/-65
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: own written software "MSD" with sound card.

Note:
. March was used for testing MSD (Meteor Software Detection)
Very soon the MSD will be freely distributed on my web site:
http://personal3.iddeo.es/ea3btz
also with the explanation in English.
With MSD, you can select different parameters:
- Audio Range frequency of detection.
- The levels of hysteresis detection.
- Number of samples and sampling rate
During March we changed the parameters every week. For this reason no data
were stored between March 17 to 25, and on March 12 and 13 we had rates of 0
or 1 per hour.

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz

Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)

The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the Ghent University format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

March 2000

Mar | UT

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 1 hour until March 25, UT + 2 hours from March 26
onwards
```

Didier Favre

Location: Astronomical Observatory, Ghent University, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate

Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. computer outage during the weekend of March 5-7

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, with manual interference rejection.
Sampling interval: one 4096 point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also
available at http://www.qsl.net/oe8fnk this includes now also Es, FAI
and radio fireball statistics, and the original leonids 1999 peak recordings.

The meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value, to show the reduced accuracy. Results for less than 20 min. observing time are excluded.

Counts of 0.5 seconds length (shortest period available, assumed to be underdense):

Notes:
. did not record during the Quadrantids, too much Y2K stuff.
. there was an outburst of underdense meteors, from Jan 13 to Jan 20 in the morning hours, every day at 01-03h UT, which shows up only on the "underdense" statistic, not on overdense of "% of total reflection time". See graph at: http://www.qsl.net/oe8fnk/obs2000.htm

. local time conversion: 1 hour ahead of UT (6h local = 5 h UT).

Werfried Kuneth

Observers: Del Dobberpuhl, John Meyer, Jack Meyer
Location: Van Andel Creation Research Center, Chino Valley, AZ. USA. 34 50' 50" N, 112 29' 50" W. Elevation 1347 meters above sea level. Frequencies: 88.5, 88.9, and 89.7 MHz for signal FM receivers; 87.9 MHz (currently an unused frequency) for noise FM receiver.
Transmitter Locations: Many possibilities including: El Paso, TX; Mesquite, TX; Commerce, TX; Abilene, TX; Farmington, NM; Colorado Springs, CO.
Antenna: dipole housed in corner reflector built from wire screen. Open end of reflector tilted at about 65 degrees above horizon and facing due east.
Antenna Pre-amplifier: 27 dB gain.
Coax Cable: 152 meters of RG-8
Receiver inputs: Four-way splitter with outputs to each receiver
Receivers: Four OPTIMUS STA-80 FM receivers modified to 10KHz band width using IF amplifiers with 80 dB dynamic range signal strength output voltages.
Data Acquisition: DATAQ type DI-190, 2-channel module connected to computer serial input port. Acquisition rate is 40 samples per second for each channel. Channel one is the combined peak signal amplitudes from the three signal receivers. Channel 2 is the signal amplitude from the noise receiver. Data are reported only when signal strength at the antenna exceeds -124 dBm. Storage continues for one second after signal drops below -124 dBm.
Interference Rejection: Data storage is inhibited if interference at the noise receiver's frequency exceeds -122 dBm at the antenna. Inhibiting continues for one second after noise level drops back below -122 dBm.
Data Reduction: Mostly automated computerized reduction.
Data Format: Results are shown as total seconds of reflection time per hour. When no figure is shown, the equipment was either out of service or results could have been contaminated by sporadic-E or interference. Data are in comma delimited ASCII.

For further technical information contact Del Dobberpuhl or John Meyer at crsvarc@primenet.com

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
LT = local time = JST = UT + 9 hours

```
Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna: Comet made 50 MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is
received by a low frequency filter (880 Hz)and fed into
the D/A converter and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENT: METEOR mailing list in English

Welcome to a Meteor & Colorgramme software users list !
This list is in English only.

You can post messages to its members via e-mail at:

meteorv4@egroups.com

You can also read and post group messages on the Web:

http://www.egroups.com/list/meteorv4

Hey, can I sound like an old fart for a minute? Weellllll ya know I passed my 13WPM at the FCC office at Atlanta back in 70 and passed my 20 in 87 now all I need is 5wpm and wished it had been that way back in 70. Finially, the FCC has got something close to being correct.

Thanks to all regarding my issue of not being able to hear UO-14. AS it turned out Winorbit was using daylight savings time. My passes had he right Az & EL, but not the right time. I think I am going to add a pre-amp to increase my sensitivity of my radio. Any recommendations on pre-amps for 430 MHz?

Jeff

I don't remember if QST published it, but a common way to make the "lindenblad" satellite antenna is to package the elements inside PVC pipe. Mine is made this way, and was pretty quick & easy - all I needed was some 300 ohm twinlead, a few feet of pipe, and a couple bucks worth of PVC fittings.

See: http://www.amsat.org/amsat/articles/w6shp/lindy.html

All,
He grabbing his marbles and going home as he does not like the rules. He can't be serious about he hobby or he would stay and help foster new hams into it. Hell he could even focus all that negative energy into going after the 35-55 crowd that have the money and leisure time to get into ham radio. So Vince are you going to do more public service to give back to the hobby or are you going to "sell out" and move over so us radio do goobers can't get more band space? I don't think you would be happy in any hobby as you are an old curmudgeon.

Hi folks...

I have an FT-726r for sale (suggest $600; reasonable offers considered carefully!).
Includes:
144-148 MHz module
430-440 MHz module
satellite module
Manuals, etc.

The rig is in good shape. I am moving to quarters not as "receptive" to satellite work as the prior location.

The Volunteer examiner (VE) administers Amateur Radio testing.
The badge is his/her identification.
Too bad this wasn't explained a month ago when this off topic thread started
(or was it longer?)
Butch
still keeping my VE badge and ham ticket

I tell you this Vincent is a disgrace to the Amateur Radio hobby. Why don't you do us all a favor and give up your callsign as well. Then you can go back to the 11 meter group. Real Amateur radio operators don't want dumb butts like you giving our hobby a bad name.

This is really funny, the easier license testing is how this FOOL below
got his license in the first place. Now that exact same issue is why the
FOOL
is resigning.

Adapt or die to change. Time has largely passed the code by,
except in specialty areas like QRP, EME, and weak-signal DX.
Vince would rather pass blame and have his hobby "die"
than adapt and continue. So be it; it's his choice.

1095. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 2000-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8d8qod$632$1@news.hawaii.edu>
Source record: 9629
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Did you simply mail the credential back to the VEC or did you
include a letter specifically requesting that you be disaccredited?
Simply returning the credential may not do that. If you really want
to make sure you are disaccredited, mail your license back to
Gettysburg with a letter requesting that your amateur license be
cancelled. Once you can confirm that your amateur license has been
cancelled, you can relax because you are no longer qualified to serve
as VE and the VEC's accreditation will be moot.

folks who want to proctor amateur radio examinations have to meet certain criteria (spelled out in the rules).

most of the exam coordinators issue badges for those meeting the requirements.

-----BEGIN PGP SIGNED MESSAGE-----

Heck, might as well stick my 2watts in:
<shrug> so you're giving up your VE badge--guess what? I'm going to
get mine, and yes, I got an extra under the (omigosh) *new* rules.
Heaven forbid we *ever* change anything--why, we could still be using
horses to get around!

The new rules? Don't really care one way or the other--might just
have taken a few months longer to get my Extra, yet ppl with that
attitude, seem to want to scorn me as "not really an Extra"--wait
until I fire 30wpm CW at you by the end of the summer. Sure, and
some of you could fire it back too :) But I bet some "real" Extras
might not :)

And I've gotten one person already licensed (KC&#65533;HLL), and am working
with two others, and they will have a license by midsummer with luck.
I'm going to go to the school here at some point and time, and try
to get a club going there, as hams in Grinnell, IA are few (3 active,
for the most part, 2 PT). I'm going to try and get involved with the
weather net in Johnson IA. Isn't this what being a "real" amateur is
about? Furthing the hobby? Generating good will with the public?
Putting forth that "Extra" effort? Why hold so much animosity?
Before you turn your license in, why don't you listen for me on 10m?
See waht kind of op I am?

Want to know what the value of my license is to me? It took me 10
years, before I got licensed--CW held me back for years, and then the
internet distracted me (and a couple hundred thousand others who
might have gone into the hobby). But I perservered, and passed my 5
wpm--and immeadiately started working on 23 & 30 wpm.

Would there have been another ham, had I not gotten a license, to
call on a repeater for an ambulance and a tow truck for the couple
who had an accident on I-35 when I was travelling to Kansas City a
few weeks ago? No one else was stopping to help, even though the
mini-van was in a ditch, and obviously damaged beyond repair. <sigh>
The new rules, are the rules, whether we like them or not--adapting
to them is what requires character, not a fast code speed.

Hello all could somebody answer this question below:

I currently have a 2mtr multimode radio that puts out 25 watts. I also own a 430 multimode radio that puts out 25 watts. I own a Arrow antenna for AO-27. Since I have very short runs of cable (11ft of RG213) to both radios do you think I would be able to work or hear FO-29 & FO-20 for mode JA work? I don't currently own any preamps or TX amplifiers.

Thanks,

Jeff Grey

Does anyone know of software to patch satellite tracking info into a
GPS.

Thanks in advance,

Scott

why would you want to do this when a GPS only needs to recieve a signal and
does not need to track anything?

1117. Satellite Recommendations

Newsgroup: rec.radio.amateur.space
Date: 2000-04-19 00:00:00 UTC
From: John Reed <jreed@NOSPAM.thor.atl.ga.us>
Message-ID: <sfsso5d4in214@corp.supernews.com>
Source record: 9551

Hi Folks:

I recently moved into a new house that was previously owned by a ham. This new place came with satellite antennas on a roof mounted tripod, with a Yeasu 5400 Az/El rotor.

Now, since I have this nice equipment, I plan to put it to use, but I'm a little curious about satellite gear, and what to buy.

I've been looking at the Yeasu FT-847 as well as the Icom IC-821. There's also Kenwood TS-790's out there on the resale market.

What would you get?

I already have a Kenwood 690 for HF and 6m, but I do not own any allmode gear on VHF or UHF.

The Kenwood 790 would be nice as it would "match" my 690, but it would be used gear...

The Icom 821 is a nice rig, from what I can read on the specs, but the Yeasu 847 does everything the 821 does, and I'd have a backup rig for HF and 6M - plus its only $100 more than the 821.

So, you who are so wise in the ways of satellite, what would you do? Which is a better radio, and one the most adapted for voice satellite. (I don't own any PSK gear to play on the digital satellite modes). Price isn't the issue here, its performance, - but I'm down to the three rigs listed above.

Please reply to the group, or send me email privately, removing the "NOSPAM" from it.

Thanks in advance.

John, N4TII

I like my IC-821 very much, it has dualband receive (the FT-847
doesn't) so you can listen/be standby at both VHF & UHF at the same
time.
I sold my "old" 2 seperate VHF & UHF rig's and still wanted to be QRV

on 145 & 435 Mc at the same time.
The IC-821 has switchable Pre-amp powersupply (menu controlled),
the Kenwood TS-790 doesn't...

I used a FT-847 once during 3 weeks on a expidition to Malta ('98 /
9H3QH) but had several times QRM from my own uplink on 145 Mc on my
downlink on 435 Mc (using simple antennas) working FO20 & FO29.

Never had QRM at home from my own IC-821 working whatever satellite.

Avoid the Kenwood.
Other suitable (older) transceivers are the Yaesu FT-736 and 726.

>The Kenwood 790 would be nice as it would "match" my 690, but it would be
>used gear...

It has some problems. This might be why it is so widely available.

Sure. I use 25w into a small beam on 2m and do ok. My receive setup is
a little different but also kind of humble. I can still hear the birds
well. My signal is one of the weaker ones out there but I do make
contacts.
FO-20 is great. 100 KHz bandpass and no QRM at all (not enough
activity). Much more pleasant than RS-12/13. I haven't used FO-29
much.

I used a TS-790 on ao-13 for several years, and plan on using it on P3D.
It's a good radio, but lacks the 'tracking' of the VFO's like the Yaesu
726/736.

1128. ANNOUNCEMENT: Dayton Hamvention PACK*BASH!

Newsgroup: rec.radio.amateur.space
Date: 2000-04-24 00:00:00 UTC
From: srbible@gate.net
Message-ID: <3904de32.12737125@news.gate.net>
Source record: 9562

Dayton Activities

Attending the 2000 Dayton Hamvention? Then don't miss out on
PACK*BASH!

What?
An event for the digitally-inclined ham, featuring:
* Buffet dinner
* Keynote Address: "Amateur Radio and Submarine NR-1"
by CDR Chas Richard, W4HFZ, USN

Commander Richard will give an overview and description of
Submarine NR-1, the U.S. Navy's only nuclear powered, deep
submergence submarine. He'll talk about highlights of some
recent missions, including the 1997 "Isis" operations in the
Mediterranean with Dr. Robert Ballard, with details of the
discovery of the oldest known shipwrecks in the deep ocean.
He'll also talk about Amateur Radio Operations on NR-1 and her

support ship Carolyn Chouest, and on Amateur Radio's impact
and benefits to both the ship and the crew.

* TAPR special interest group meetings
* "Birds of a Feather" gatherings

When?
Friday evening, May 19, 2000
Doors open at 7:00 pm; dinner served at 7:30 pm
Speaker and meetings after dinner

Where?
NCR "Sugarcamp" Conference Center, 101 W. Schantz Ave. --
South of downtown Dayton, just west of Main St. (Rt 48).
Maps available on the TAPR web site (www.tapr.org) or at the
TAPR booth.

How?
Dinner requires advance registration and payment through TAPR.
Tickets will be available at the TAPR booth on Friday, though
we strongly encourage registration <before> Hamvention.
The cost is $25.00 per person, tax and tip included.

All amateurs are welcome to attend, enjoy the speaker, and
particpate in the meetings, although only those purchasing
a dinner can eat.

To register, contact:
PACK*BASH
c/o TAPR
8987-309 E. Tanque Verde Road #337
Tucson, AZ 85749-9399

Phone: (940) 383-0000
Fax: (940) 566-2544
Internet: tapr@tapr.org

Visa/Mastercard Accepted

Who?
PACK*BASH is co-sponsored by TAPR -- Tucson Amateur Packet
Radio, the national leader in digital communication -- and the
Miami Valley FM Association, Dayton's packet radio club.

For more information (including maps), go to
http://www.tapr.org/tapr/html/dayton.html, or send email to
tapr@tapr.org.
You can request information via packet radio at
BASH@W8APR.#DAY.OH.USA.NOAM.

1129. FT-847 Earphone volume

Newsgroup: rec.radio.amateur.space
Date: 2000-04-26 00:00:00 UTC
From: Greg <greglh@gte.net>
Message-ID: <39067991.349461E8@gte.net>
Source record: 9563

Can anyone answer a question about the earphone volume on the Yaesu FT-847? At a given setting.the speaker volume is more than adequate, while the earphone volume is very low into 'standard' 8 ohm stereo headphones.

I notice the owners manual says the unit is 'optimized' for 16 to 32 ohm headphones....I have never owned headphones with this impedance value....could the mismatch account for a tremendous difference in listeneing level?

Any insights into this from other FT-847 owners?

Thanks, Greg K7YDL

>listeneing level?

Yes, that could well be. When the radio adapts the power level using a
series resistor, a lower-impedance headphone will receive less power than a
higher-impedance type.

Cheap "walkman-type" headphones usually are 32 ohms, and when you wire the
two halves in parallel you get 16 ohms; apparently that is what they expect
you to use.

When you want to use your existing headphone, lower the series resistor
that is probably found near the headphone connector. Or use a transformer
(e.g. from a sixties transistor radio) between the radio and the headphone.

Personally I only use Helixes on 23cm band,
but check out this page:

http://www.webcom.com/af9y/helix.htm

Might help perhaps...

Do you know of a deserving youth Amateur Radio who could be a candidate for the 2000 Newsline Young Ham of the Year Award? This bit of information is for you. Please spread the word to all Amateur Radio operators and Amateur Radio clubs you know, and consider nominating that young individual who has contributed to the betterment of Amateur Radio. Nomination Deadline: MAY 30, 2000

The nominating period for 2000 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details.) Any continental United States (48 contiguous states) FCC licensed Amateur Radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted BEFORE May 30, 2000 on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the 2000 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download from our website at http://www.arnewsline.org. With continued corporate sponsorship, the award presentation is scheduled take place this summer at the 1999 Huntsville Hamfest. The Huntsville Hamfest, Chaired by Mr. Scotty Neustadter, W4WW, is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracting some 7000 attendees.

When GeoClock had its own BBS some years ago there was a program
you could add on to it that tracked satellites too... I wonder if anyone has
this or knows how to get a copy.....I've looked just about everywhere and
the author of Geoclock doesn't seem to know about this.

Please if anyone could help I would greatly appreciate it. I don't know
how well it worked but would like to "check it" for myself. I have a few
satellite tracking programs and I prefer the old DOS programs like
Instant Track

Mark

Mark, just in passing...have you been in touch with Geoclock's author recently? I'm trying to find an e-mail address for him. I was about to buy the CD-ROM with the complete collection of Geoclock maps, only to find that his web page had shut down (it simply had a banner on it saying "Closed" some weeks ago) and now has vanished completely, even to the root server. Any thoughts?

Thanks in advance. BTW, if you reply, please use owlsprng@iol.ie instead of the deja-com address.

Best regards,
Diane Duane

Hello!!
I have a web page dedicated to the radio hobby here in Tampa Bay Florida. I am in the process of launching a new audio chat network on a channel for amateur radio enthusiasts. The idea is for webmasters to put the small html code somwhere on their amateur radio web page which would be linked all together worldwide. The system utilizes the new HearMe plugin which is a small 80k or so program new visitors of the amateur radio audio chat would download upon landing on the page which has the html code for the plugin. Please let me know if you decide to use the system so I can add your site to my links page to let others know your site is connected to the network. For a demonstration of the system you may email me for a time and date so you can see it in action. To get the html code please visit my web site below. To get further info on the HearMe requirments to have it work click on the help are for Hear Me on my web site. I am in no way affiliated with HearMe and my web site is a noncomercial page.You may also visit my radio page at the url below from 7pm to 8pm eastern time every day I try to be in my scanner audio chat at that time. I look forward to hearing from.
Thankyou
Best Regards

1152. GPS Selective Availability TURNED OFF!

Newsgroup: rec.radio.amateur.space
Date: 2000-05-02 00:00:00 UTC
From: n5zgt@swcp.com
Message-ID: <390e726c.35085280@news.swcp.com>
Source record: 9586
Cross-posted to: rec.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.space

Hi All,

For those of you who use APRS, or any other Amateur Radio activities where GPS is used/needed, you will be happy to know that Selective Availability (SA) has been turned OFF, at 0000UTC on May 2, though the full effects weren't noticed until around 0500 UTC.

So, look forward to greater accuracy with your GPS receivers, with less wandering, and improved altitude readings! Make no mistake that there will still be errors caused mainly by the atmosphere.

Also, for those now wondering what will come of DGPS now that SA is off, please remember that DGPS is the most accurate "form" (for lack of better words) of GPS (1-5 meters) -- even better than GPSs WITHOUT SA (unless long averaging is used, similar to the ones used for surveying). So they'll still be used heavily for many applications!

Enjoy!

73,
Brian, N5ZGT

Hi Sam,

The problem with Mir is not power, it's competition. I lived in Hawaii for 4 years & got started with sats there. I had a Kenwood TH-21BT, 1 watt HT hooked up to a Cushcraft 4 element yagi in a fixed position. I sat there waiting for Mir to pass over just to see if I could hear it. Ha!!!! There's no way I could work it with 1 watt & little yagi. 1 other person on the freq sent an unproto packet to check to see if anybody else was on freq & we arranged who would contact Mir first. I planned for failure but was elated to "hit" Mir as it flew over Hawaii. After that I regularly worked Mir both voice & packet with that same set up. I knew people who worked Mir voice with a 5 watt HT & a rubber duck. I got here to the mainland & it was tough. He was working XE1 to VE3 to K6 to K4's. Lots of competition. The biggest pile-up I ever saw in Hawaii was 6 (six) stations. Just be patient, you'll find Mir easy if you could catch him off peak hours. Good luck & 73's.

Ralph NH6QT/3

Hi Joe,
I've built the helix mentioned in the ARRL Antenna book. Checked it out from the local library. Just using it in rec'v mode right now. Was easy to build and tune.. Works well on the Leo's. Havent compared it to a Quagi I built also yet... Busy with 1st,2nd,& 3rd harmonics right now ;-) .. Only dis-advantage is the polarization. either righthand or lefthand circular.

I agree. No amp is needed, my first year I got into the packet
station with a meager 5w through an HT whip but got a mobile rig and
ringo ranger after that. 50W is PLENTY even though some guys use much
more. If you use a beam 5-10w would probably do you just fine.

When Norm Thagard was on board MIR, I worked him several times on FM voice using ten watts from an old Yaesu memorizer and a homebrew five element quad made out of refrigerator tubing and scrap lumber. I have some pictures of the set-up in the space and astronomy section of my web site.

I am putting together a couple of Helix antennas for 2.4gHz. Does anyone have a copy of the QST article describing how to adjust the feedpoint to obtain 50 ohm feed impedance? Seems to me I remember it being the position of the connection of the helix to the connector on the ground plane???

Also, what has been used to obtain the correct spacing of the turns. I wound mine by hand and the consistancy of turns if pretty poor. What have successsful builders used for a spacing jig??

I don't have the article you mention, but I have built some helices.

The impedance match can be done by putting a quarter wavelength section
of the end of the helix parallel to the reflector. From there on it
bends upward into the helical shape. However, for the correct match
to occur at an acceptable distance from the reflector (taking water
buildup into account), it is better to widen the helix using a strip
of copper in this area.

Fine tuning can be done by adjusting the diameter of the last turn of
the helix (the free end). The match is usually better and the bandwidth
for good matching is wider when the last turn is tapered to a diameter
about 30% less than the remainder of the helix.

I have wound helices by close-winding them on a tube, then letting the
resulting coil expand, and finally stretching the coil while mounting
the standoff pillars on the boom. Just use a ruler to bend the turns
to approximately equal distance; this is not too critical.

The following info was on the ANS mailing list:

Wakeup 04:00 UTC
Breakfast 04:30 UTC
Lunch 09:00 UTC
Dinner 15:00 UTC
Bedtime 19:00 UTC

Normal working day is 04:00 to 18:00 UTC. Amateur radio operation is most
likely after the normal working day or during meal times.

Does anyone know the feasibility/legality of using a ham satellite as a link to a remote base station? IOW, use the bird to establish a 420+ MHz link between the control point and the remote base, which might then operate on an HF band or another VHF band? Would the satellite owners frown on this?

> 20 watts will do fine...

now:
I worked (and so did a lot of others) MIR using 1w and
a rubber duck inside my house some time ago when the
APRSheads were sending packets to MIR. At that time,
it was all simplex on one freq. No doppler, all on 2m.

The following is the Unofficial Space Shuttle Launch Guide. This file
contains
information on how to get a launch or landing pass, and if you can't
get one,
where to view the shuttle for launch, re-entry or landing. This file
also
contains the distances to the pads from the various viewing sites,
Shuttle

frequencies, HAM frequencies for listening to and watching NASA
select, hints
on photographing launches, where to watch SSME test firings, how to
get
accredited as a Press Personage, internet sites to get additional NASA

information, how to get the latest two line element sets, and
information for
teachers on how to access NASA information.

NEW Landing information from Kim Keller
UPDATED VIP Passes

NASA Causeway Site Passes
==========
Thanks to werners@novavax.UUCP, Mark and Julie Bixby
<markb@spock.dis.cccd.edu>
Peter Armstrong, Christopher A. Poterala <potsie@sils.umich.edu>,
Michael
Borthwick <holden@netspace.net.au>, and Ned Forrester
<nforrester@whoi.edu>.

You can view shuttle launches right from the base at the NASA Causeway
Site
which is about 10 km from the launch pad. This is the BEST and closest
view
for the general public.

The KSC Visitor Center offers bus rides from the visitor's center to
the
Causeway Site. The cost is $10 for a launch viewing opportunity (LVO)
ticket or
for $15 you can buy a combination ticket which includes an LVO ticket,
an IMAX
movie, and a mission briefing. LVO tickets are available five days
before
launch from the KSC Visitor Center Pavilion (open seven days a week
from 9am
to 5pm, except launch days). The buses leave from the KSC Visitor
Center and
bring you back there after the launch. You get to hang out at the
Visitor
Center before and after, so you can skip a lot of the traffic. Tickets
have to
be picked up ahead of time at the Visitor Center, but they will FedEx
them to a
place of your choice if you are not going to be in the area early.

You can also obtain a free Causeway Site Pass for your vehicle by
sending a
postcard with your name, address, and mission number to

Car Passes
PA-PASS
Kennedy Space Center, Florida 32899
ph. (407) 867 6000

Car passes are reserved as the requests are received based on their
remaining
availability. Your car pass will be mailed to you approximately three

weeks
before the mission's launch. If you will be leaving your residence
before the
pass will reach you, give the address in Florida where you will be
staying,
as well as your home address. Requests for more than one pass can not
be
accommodated. It is recommended that you be at one of the KSC entry
gates at
least two hours before launch as traffic can become quite heavy.

Each vehicle launch pass allows the entry of a vehicle. If you have a
van,
camper or recreational vehicle, please request a vehicle pass for an
oversized
vehicle. One per address. In general, if you know the launch that you
wish, ask
for that launch. The launch pass is good for that launch no matter how
many
times it is postponed. If you know a general time frame, then ask for
that time
frame. You can also obtain NASA Causeway passes by writing to any NASA
centre.

For information on a pass if you have requested one, call KSC public
affairs at
(407) 867 2622. For information 24 hours before the launch on how the
launch
is progressing, call (407) 867 2468.

Other Viewing Recommendations (frederick.mckenzie-1@pp.ksc.nasa.gov
and others)
==========
If you can't get a launch pass I suggest you come to Titusville. Go
east on
State Road 50 from I-95, to US-1. Go north on US-1 to the "Miracle
City Mall"
at Harrison. Park somewhere north of this spot. Anywhere north along
highway 1,
or east (as far as you can) along highway 406 (402) is good
(specifically Sand
Point Park), just as long as you can see the VAB and don't have trees
blocking
the view. If you can afford it, just pay the $10 to park in someone's
yard along
the river. Also you can try Jetty Park at Port Canaveral (you will be
south of
the launch looking north).

You can go to the Visitor Center the day on the launch and watch from
their

obstructed view. The only problem with this one is that they close the Visitor
Center 5 or 6 hours before the launch and about an hour after, so you have to
stay at the visitor center for at least 6 hours.

Regardless of where you are going to see it, arrive early (at least 2 hours
before launch). Be prepared to get into some real heavy traffic, it will also
take some time to get out of the area. Bring along some food and drink,
umbrellas, sun glasses, sun screen, portable TV/radio, binoculars, VCR,
whatever.

When watching a launch, listen to FM Station 91.5 (it is a local religious
station) or AM 580 out of Orlando (Thanks to Matthew DeLuca). NASA Select
Television is carried on Spacenet 2, transponder 5, channel 9, 69 degrees West,
transponder frequency is 3880 MHz, audio subcarrier is 6.8 MHz, polarization is
horizontal.

TV: Local stations such as channels 56, 2, 6 & 9 sometimes have live coverage.
They usually just interrupt the program that is in progress for the final 2
minutes of prelaunch, and then a couple of minutes after launch. Same for
landing.

Radio: Some local radio stations to listen to are 91.5 FM, 99.3 FM, 101.1 FM,
1350 AM and 580 AM.

Hints for First-Time Launch Attendees (Peter Armstrong)
==========
This section offers hints and advice for those attending a shuttle launch for
the first time. Included are tips on
- what launches to attend,
- obtaining launch passes,
- when to arrive for a launch, and
- where to stay.

For the first time shuttle launch viewer, I'd say that you should choose
your launch wisely. For instance, if you are travelling half way around the

country (or world), don't plan too heavily on seeing a launch that has just a
6 minute launch window. Instead, pick one that has a long 2.5 hour window if
possible. That increases the odds that you'll actually see it go up. Secondly,
if you are viewing the launch from the NASA Causeway, wait for a launch from
Pad A. It is significantly closer than Pad B is. Thirdly, your odds at seeing a
launch may be better for early morning (e.g., near sunrise) launches than for
launches at other times of the day or night. There are several reasons for
this: at sunrise at KSC, the TAL sites are still in daylight; the winds are
usually lighter in the morning; and the sea breeze, which can bring clouds and
rain showers over the space center, has not yet had time to begin.

Regardless of where you are viewing the launch from, secure your launch pass
as early as possible. Most, if not all, of the various types of passes are
definitely a finite resource, and are given out on (more or less) a first
come, first served basis. You should begin acquiring your launch pass or
passes two to three months before the launch date. Elsewhere in this guide you
will find information on the different types of launch viewing passes. Many
people choose to view a launch from the shore in Titusville, but there is
really no reason not to get a closer view. The NASA Causeway viewing site is
the most easily accessable site for the general public (although you still need
a special vehicle pass) and it offers a great view of both launch pads.

When going to view the launch, arrive on-site as early as possible. The center
opens for viewing site traffic about 4 hours prior to a launch, and with good
reason. The traffic can be quite heavy in the hours leading up to a launch, and
the last thing you want to do is to get to the viewing site late (or not at
all). Additionally, the KSC gates will close about one hour prior to launch to

clear the roads for emergency traffic, so if you're late, you may be out of
luck. Also, do not arrive at a KSC gate before they are open for viewing site
traffic. Although other traffic is allowed through, you will be turned away by
the KSC police even if you're a minute early.

Another bit of advice for a first time launch viewer is to not focus too
heavily on taking lots of photographs. The event happens so quickly that before
you know it it's over and you may realize that you viewed the whole thing with
one eye closed and the other stuck in your viewfinder. I've attended some
launches where my primary goal was to take pictures or video, and others where
I just stood there and watched it go up without worrying about pictures. I have
to say that I enjoyed the latter much more, but the tradeoff is that I had
fewer pictures to take home.

On the question of where to stay while you're in the KSC area, if your goal is
to be as close to the space center as possible, then I'd recommend staying in
Titusville. The Ramada Inn KSC is nice, as are the Holiday Inn and Best Western
hotels. If your goal is to have as nice a room as possible, then definitely
stay in Cape Canaveral. My personal favorite is the Radisson Resort at the Port
on A1A. There are many other very nice hotels in Kennedy Space Center area:

Cocoa Beach

Best Western Cocoa Inn 407 632 1065
Cape Colony Resort 407 783 2252
Cocoa Beach Oceanside Inn 407 784 3126
Crossways Condominium 407 784 5331
Crossways Inn Resort 407 783 2221
Days Inn Oceanfront 407 783 7621
Discovery Beach 407 784 2550
Hilton 407 799 0003 & 1 800 526 2609
Holiday Inn 407 783 2271 & 1 800 HOLIDAY
Howard Johnsons 407 783 9481 & 1 800 654 2000
Motel 6 407 783 3103
Ocean Landing 407 783 9430

Ocean Suite Hotel 407 784 4343
Wakulla Motel 407 783 2230

Merritt Island

Holiday Inn Merritt Island 407 452 7711

Cape Canaveral

Radisson Resort at the Port 407 784 0000
Canaveral Towers 407 784 1130
Royal Mansions Resort 407 784 8484

Titusville

Best Western Space Shuttle 407 269 9100
Days Inn 407 269 9310
Holiday Inn (riverfront) 407 269 2121
Howard Johnson (waterside) 407 267 7900
Quality Inn 407 269 4480
Ramada Inn 407 269 5510

Reserve your room well in advance--at least 5 or 6 weeks prior to the launch
date. Hotel rooms have been known to fill up quite rapidly.

Distances to Pads (thanks to Peter Armstrong)

Internet Access for Visitors to KSC (Jerry Russell, jdr@digital.net)
==========
Any visitors to KSC that would like to have Internet access to get their mail,
stay in touch, are welcome to stop by our Network Control Center in Cocoa, Fl.
and get online free! If you have a computer with you we will give you a FREE
guest account for 24 hours, menu based (text) account with full Internet
access. We are a commercial provider here in Cocoa, but offer this service to

our visitors as a FREE service and encourage you to use it!
FLORIDA ONLINE, 3815 N US 1, #59, Cocoa FL 32926, (407) 635 8888
voice,
635 8833 DOS BBS, 633 4710 FLORIDA ONLINE, 635 9050 fax.

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and
Ku-Band.
The UHF frequencies are simple AM voice and are very easy to copy.
These
frequencies are used for launch and landing operations, EVA
operations, and as
an additional voice downlink when other channels are in use for the
current
ground station has no S-Band capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The
voice
channels are digital slope delta modulated and are multiplexed in with
the rest
of the Orbiter telemetry and is very difficult to copy. Much of the
downlink
TV is on S-Band also, but is wideband FM and should be easy to copy.
The
frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry
during
launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data
relay
satellites and is used much more heavily in Spacelab flights than in
others.
The data rate is very high (50 Mbit/s). These transmissions are
directed
to TDRS satellites in geostationary orbit on a frequency of 15.003
GHz.

(Information via WA3NAN, and WA4SIR)

Ed Sileo (edsileo@qnet.com) says that Shuttle audio can be heard on
169.4
MHz at Edwards Air Force Base (EAFB). The transmitter site is on

Lehman Ridge
on the east side of Edwards near the Astronautics Lab. This can be heard during
all flights since you never know when the shuttle may land at EAFB.

Shuttle Audio Retransmissions
==========
Excerpt from the Goddard Amateur Radio Club (GARC) Shuttle Retransmission Fact
Sheet (from Jim Blackwell, N3KWU, HRSBLACKWELL@deblur.gsfc.nasa.gov)

Retransmission of Shuttle air-to-ground audio from the GARC (WA3NAN) may be
heard on the following frequencies:

Frequency (MHz)	Mode	Antennas
3.860	SSB LSB	N-S/E-W Dipoles
7.185	SSB LSB	N-S/E-W Dipoles
14.295	SSB USB	3-element Yagi
21.395	SSB USB	5-element Yagi
28.650	SSB USB	4-element Yagi
147.45	FM Simplex	Phased vertical

Where SSB is Single-Side-Band and LSB, USB indicate either Lower and Upper Side
Band. A short-wave receiver possessing a Beat Frequency Oscillator (BFO) is
needed to receive these transmissions.

GARC maintains a Bulletin Board System (BBS) which is accessible by way of the
Internet, modem and packet radio. The BBS contains areas with information on
the club, mail distributed by the Amateur Satellite Corporation BB (AMSAT-BB)
listserver, SAREX bulletins and Space Shuttle mission information. During
Shuttle missions, users can also access Keplerian Orbital Elements (Keps) which
are generated by the club based on information generated by NASCOM at GSFC
(these orbital elements are read over-the-air by our volunteer operators). The
BBS is accessible by the following means:

1. Internet: telnet to wa3nan.gsfc.nasa.gov (128.183.105.17)
2. Telephone: (301) 286-4137 (up to 14.4 kbaud supported)
3. Packet Radio: WA3NAN on 145.090 MHz in DC area.

Just follow the login instructions. Note: Full access to the BBS is limited

to members of the club.

GARC also maintains a WWW Server containing a wide variety of information about
the club, its activities, as well as links to other Amateur Radio resources.
The URL address is:

http://garc.gsfc.nasa.gov/www/garc-home-page.html

Excerpt from rec.radio.amateur.misc FAQ Part 3 (modified):

Shuttle audio is re-tranmitted by the following Amature Radio stations.

Station Centre VHF 10m 15m 20m 40m 80m

K6MF ARC 145.585 7.165 3.840
W1AW ARRL 147.555 28.0675 21.0675 18.0975 14.0475 7.0475 3.5815 1.818
WA3NAN GSFC 147.450 28.650 21.395 14.295 7.185 3.860
W6VIO JPL 224.080 21.280 14.282 7.165
W5RRR JSC 146.640 28.495 21.350 14.280 7.227 3.850
AK8Y LERC 145.670 or 147.195 (alternate)
WB4FUR SSC 146.700
KA9SZX 146.880 (Video at 426.250)
K4GCC 146.940
WA4VME 145.170

You might also try 20192 LSB which is NASA.

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on 40-80m.
W1AW - ARRL, Newington, CT (news bulletins, 9:45 PM and 12:45 AM EST)
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
W5RRR - NASA Johnson Space Center (JSC), Houston, TX
AK8Y - NASA Lewis Research Center (LERC), Cleveland, OH
WB4FUR - NASA Stennis Space Center (SSC), Hancock County, MS
KA9SZX - Champaign-Urbana, IL
K4GCC - John Anderson, Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)

You can also go to

http://spacelink.msfc.nasa.gov/Educational.Services/Technology/Shuttle.Amateur.Radio.EXperiment/Hearing.Space.Shuttle.Communications

for a listing of repeaters in the USA that offer this service.

Amateur TV Repeater of NASA Select
==========
Chris Best (clbest@ddi.digital.net) writes:

I belong to a local ham radio club called the Launch Information
Service and
Amateur Television System (LISATS for short). We operate, in the
Cocoa Florida
area, an Amateur TV Repeater where we, during shuttle missions,
re-broadcast
NASA Select (from a satellite receiver located at the repeater site).
We also
have a computerized bulletin board (VIDEO) at the repeater site which
cycles
through screens of interest to hams, one being a projected launch
schedule
(shuttle and expendable). The LISATS repeater can be viewed by anyone
with an

outside antenna and a cable ready TV in the launch area. Please
checkout:

http://ddi.digital.net/HamRadio/lisats.html

The two primary points of contact for LISATS are myself (ham radio
callsign
N4KCI) or Ernie Baldini (ebaldini@ddi.digital.net, K4RBD) who is the
prefered
Amateur TV expert.

Photographing Shuttle Launches
==========
andreas@il.us.swissbank.com has some hints for photographers:

Get the longest lens available (e.g. rent one at Helix). I used a
300mm
shooting from Titusville and was still too far away to clearly see the
shuttle.
However I could take beautiful shots of the engine's firetrail and the
smoke.

Put your camera into continuous shooting mode (unless you have a VERY
high
speed camera like a Nikon), as the whole spectacle will be over within
no time.
I shot about 1 roll of film (36 pictures) until the shuttle was gone
for good
while almost constantly pressing the button.

Use a LOW speed film (ASA 50) as the light is so bright (Remember:
NASA
launches only under good weather conditions), that even with a long
tele lens
you still have enough light left for short exposure times (I had
1/1000 with F
5.6 and a Kodachrome 64). That way making detail enlargements is also
easier,
meaning less grainy.

Try to AVOID a tripod, as the shuttle moves "upwards to the right" (at
least
from Titusville with the standard 28 degree inclination). You are more
flexible
if you use a onepod or even better one of those professional
harnesses, that
you wear like a jacket and that support your long lens (like a tripod
attached
to your upper body).

During the night before the launch you can see (at least sometimes) a
search
light illuminating the launch pad. With a tripod and a very long

exposure time
(> 20 sec's on Kodachrome 64) you'll get nice pictures as well. Make several
shots with different times according to general night time photography rules.

A final hint for the early-birds: I was lucky enough to see the big and red
glowing sun rising exactly behind the VAB (from the US1 in Titusville). An
incredible view, that didn't even require a tripod.

Jim Blackwell (hrsblackwell@stars.gsfc.nasa.gov) and Todd L. Sherman
(afn09444@afn.org) has these hints:

I can also say something about photographing night launches. Basically, for
STS-61 and STS-67 I used 1000 ASA film and shot at 1/1000 th of a second at
F/8. For STS-61 I was at the VIP site at 5.3 km and used a 70-210 mm zoom at
the 210mm setting. For STS-67, I was at the NASA Causeway (about 10 km I
think) using a 500 mm f/8 lens. Got great shots in both instances. I used
Kodak Royal Gold (used to be Ektar) 1000 ASA film. I would also advise anyone
to remove any filters they may have on their lenses as they can get nasty
internal reflections and that a good, sturdy, well-built tripod is a must,
especially with the 500 mm. Even footsteps from other persons nearby can be
amplified by the tripod if it's not a good one. I also used a cable release and
a motor winder on the camera.

Todd L. Sherman (afn09444@afn.org) has these hints on doing time exposures
of night launchers from afar:

I can tell you that you should give yourself say a half hour ahead of the
launch to get yourself set up and ready, with camera pointing in the direction
the shuttle is expected to come up above the horizon. Make sure the camera is
on a good, sturdy (as sturdy as possible) tripod, and make sure you're as far
away from other people as possible because even thier walking around can cause
vibrations that the tripod can pick up and exaggerate.

Set the shutter speed dial on [B]ulb and connect a length of cable release to
the button. When you see the first hint of glow rising, open the shutter and
hold it open with a cable release until the SRBs burn out, then close the
shutter. You now have a time exposure of the launch. What you should see upon
developing is a long, bright trail starting at the horizon and curving upwards
into the sky as the shuttle rises. You'll also get some minor trailing of the
stars. Make sure your position is as dark as possible with no nearby city
lights in the direction the camera will be looking or you will get some sky
"fog" which may ruin the shot. If it's partly cloudy, try taking the shot
anyway. You never know what might happen. There may be breaks in the clouds
through which the SRB contrail may show through, providing an interesting shot,
still.

Don't forget to put your photo up on the web! Then tell us where to find the
photos in one or more of the space-related newsgroups, so that we can all
`ooh and aww' at them! You'll also want to tell us how you made the shot...
film speed, aperture setting, shutter speed, lens size, camera used, sky
conditions, and direction of light.

Most-likely, from your own city's location, you won't be able to see any detail
of the shuttle or it's outline (especially here in Gainesville, 145 km away
from KSC). You'd need a telescope for that and, besides... you'll be too busy
concentrating on your exposure to have a look.

If you have any filters on your camera, though...take them off for a nighttime
shot. These things only happen once in a long while, and you're only going to
get one try (unless you're gifted with a large budget and can afford an arsenal
of other cameras). You don't want the chance of internal glare or reflections
ruining your shot.

And chain little Jimmy to a stake permanently out of your camera's field of
view. You don't want him jumping or standing in front of the camera and
ruining the shot, either.

Expendable Vehicles
==========
These are usually launched from the southern part of the base, best viewing is
at Jetty Park or south along the beaches of Cape Canaveral and Cocoa Beach. Not
as crowded as shuttle launches, but still give yourself some time to arrive
early. Jetty park can fill up so plan an alternate. Again bring your stuff.

Philip Chien (KC4YER@amsat.org) wrote:

For the Delta launches at the Cape the press site is actually within the
Impact Limit Lines (about 1.5 km from the pad), but the press is considered
part of the launch team, so we're there under an exemption as launch
critical personnel. There are discussions underway to move the press site
to the Trident turn basin at the south end of the Cape, not that far from
the publicly accessible areas. About the only advantage to that site is
you have a straight line of sight to the Atlas, Delta, and LMLV launch pads.

The VIP viewing site for Deltas and Atlases is located in the middle of the
Cape, close to the 'skid strip' about twice as far from the launch pads.
It also has the disadvantage of obstructions in the way, primarily trees.

Landing Information
==========
Unfortunately the KSC landing strip cannot accommodate a "viewing public"
because it is situated on wetlands, however gt3597a@prism.gatech.edu
suggests:

If you do happen to try and view the landing at KSC, do not despair when you
realize actually how far away US 1 is from the runway. Even a moderately
powered set of field glasses will provide good views of the Orbiter as is

decelerates into the KSC area. That twin sonic boom is very unique and, for
me, was well worth the drive by itself. You will actually be able to see the
Orbiter as it comes into the KSC area and turns on the heading alignment circle
better than during the final approach.

Don Diego (don.diego@nosurf.com) and Peter Armstrong also suggest:

The best viewing site for the Shuttle landings is the Shuttle Landing Facility
(SLF). There are bleachers available about 140-180 metres from the runway.
What a great spot. Not only is it the best possible viewing site, you get to
hob knob with astronauts and VIP's. VIP invitations now sent out by NASA
headquarters are for launches and landings (see following section on VIP
passes). Other passes from NASA may also invite you to the landing if you are
a shuttle worker or involved with the payload. Unless you have very good
connections, the general public cannot have access to the SLF.

As with the launch facilities NASA Select audio is provided on site as are
restroom facilities and vending areas run by NASA.

For a realistic spot there's really only one choice. On US1 in Titusville
across the Indian River from KSC. Hope it's not early in the morning,
otherwise, you're going to be facing directly into the sunrise. I've tried on
several occasions to try to catch a glimpse of the orbiter coming in as I was
in Cocoa Beach or the city of Cape Canaveral but you're just too far away.

Whether you get lucky enough to get on KSC or have to settle for the US1 site
you're in for a real treat. A landing is every bit as exciting as a launch.
During a launch it's Boom, Zoom and in two minutes it's gone. But with a
landing you have time to soak it all in. The key is picking it up visually as
soon as possible. The thing to remember is at 15,000 metres (50,000 feet) the
orbiter can be seen directly over the landing sight. Look straight up and

watch for the puffs of smoke coming from the Reaction Control System (RCS)
jets. Once you pick those up you should have no difficulty following it around
the HAC and all the way down. Contrary to popular belief the thing doesn't
land silently. When you've got an object that big and bulky cutting through
the air at that velocity you get a wind rushing noise that has to be unique.

US1 in Titusville can be accessed from SR50 from Orlando or I-95 from the North
or South. Local radio stations that have the best NASA coverage for any NASA
related event are WMMB AM 1240 or 99.3 FM. Prior to any operation events can
be followed locally on TV channels 2, 6 or 9. Or pick up a copy of the local
newspaper The Florida Today. Some hotels in the area also carry NASA Select.

Kim Keller <kekeller@mindspring.com> writes:

It is amazing that a vehicle as large as the orbiter would be hard to see
landing, but it is! Here are some tips. The orbiter approaches KSC from either
the northwest or the west, depending on the orbital inclination. As it enters
the vicinity of KSC, its altitude is somewhere between 12 to 15 km. It will
look like an airliner at high altitude, if you are fortunate enough to catch
sight of it before it enters the heading alignment circle. Sometimes, you may
catch sight of short contrails as the aft RCS thrusters are used to assist the
rudder in steering the vehicle. They are the best clue to catching sight of
the vehicle at high altitude, but they are unreliable; you may or may not see
them. I start looking in earnest for the vehicle when I hear the PAO announcer
say the vehicle is approaching Titusville. At that point it's helpful to know
which direction the orbiter is approaching from. Generally, if it's returning
from a high inclination orbit, it'll approach from the northwest. If it was a
low inclination orbit, look to the west. As it flies over the runway,

it's
still at high altitude, and will begin a turn around the heading
alignment
circle. The direction of the turn depends on the runway direction the
orbiter
will use. The turn takes it out over the Atlantic.

KSC has one runway, referred to by two numbers: 15 and 33. These are
abbreviations for compass headings of 150 and 330. 150 runs from
northwest
to southeast, 33 is just the opposite. The PAO announcer will have
announced
much earlier which runway will be used. This will determine where the
best
place to view the landing would be. If runway 15 will be used, your
options
are limited. You will need to be in Titusville to see the final
approach.
There is a park on the edge of the Indian River at Route 407 which
gives the
best view of the area of the runway, but you won't see the runway
itself. It
is about 8 km from the park. When the orbiter touches down you will
lose sight
of it, except perhaps for a view of the tail. It depends on how high
the trees
have grown!

If runway 33 is in use, you have more options. The best place to view
is from
the parkway near the KSC Industrial Area. You can take some excellent
pictures
from this spot. This is just past the KSC Visitor Center. If you are
in this
area, the orbiter will pass from right to left. As it approaches, you
will be
able to hear it. The airflow over the structure and the sound of the
APUs
combine to make it sound like a powered jet. You will also see one of
the
Shuttle Training Aircraft flying loose formation off to one side. It
will
disappear from view to the north as it reaches the runway threshold.
Other
viewing spots for a 33 landing are the Beeline Expressway between
Merritt
Island and Cape Canaveral, or along the Indian River at Titusville.

Shuttle Re-entry Flyovers
==========
For an example of a shuttle entry plasma trail photo go to

http://www.sworld.com.au/steven/space/shuttle/images/

Todd L. Sherman (afn09444@afn.org) has these suggestions about viewing and
photographing shuttle re-entry flyovers:

You'll first need to go to the "Sightings" section of the NASA Shuttle Web site
("http://shuttle .nasa.gov/") a day or two before actual landing and look at
the sightings list. The top part will be for viewing the shuttle over your own
city while on orbit. Keep scrolling on down and you'll come to the REENTRY
sightings list. This list will list many cities along the incoming flight path
and offers appearance and disappearance azimuths, maximum heights, approximate
times post-max-alt that the sonic boom should be heard, etc. (I'm trying to
convince them to post, from now on, data for the ALTERNATE landing opportunites
as well. Up till now, they've been posting only for op #1, which is nearly
always waved off and, never updated once that happens.)

I've tried to catch the shuttle as it flies over Gainesville but have always
been clouded out whenever it happens and I've got a camera in hand. Thus, I
can't offer any working experience there, either...shutter speeds, apertures,
film brands and speeds. Sorry. This part is a mystery I never see covered,
and it would be nice if someone who HAS tried it before would offer his or her
own experiences for others like me.

Edwards Landing Passes
======================
For a landing pass at Edwards, Mary Shafer
(shafer@skipper.dfrf.nasa.gov) says:
(Steve Handler (cityfarm@aol.com) advises us: The Public Affairs Office at
Dryden Flight Research Center says that there are no landings scheduled in 1995
for Edwards and thus they are not giving out any landing passes at this time.
They also indicated that the ability to see landings at Edwards is via the
courtesy of the Air Force.)

There are three ways to see the Shuttle landing at Edwards AFB, listed in order
of restrictiveness of access and availability.

1. The East Shore area on the lakebed. Take Hwy. 14 to Avenue F and follow
the signs or take Hwy. 58 to 20 Mule Team Road and follow those signs. This
area is opened about 2 days before the scheduled touchdown. The viewing area
is an unimproved area so don't expect many amenities. I think that there are
sanitary facilities and that food and drinks can be purchased. It's suggested
that you bring food and water. Nothing is required for access to this area.
If any viewing is allowed this site will be open. The only times they don't
open it is for the DoD's classified missions.

Burns Fisher (fisher@skylab.enet.dec.com) says the view you get depends on
exactly what course the shuttle comes in on. If the shuttle lands on the
ascending node of its orbit you only see the shuttle coming straight in and
landing in front of you...but not too close. For a descending node landing the
view is much more spectacular as you see the shuttle turning and passing right
above you (described by Burns as "a *gorgeous* sight!").

2. The hillside viewing area. This is on the hillside, just above
Ames-Dryden, and requires a special pass. This pass is good for one vehicle,
with any number of passengers. You can't enter the Ames-Dryden complex but you
can walk down the hill to the cafeteria and the gift shop, etc. More
amenities, including radio transmissions from the Shuttle and JSC. Some of us
believe that this area has the BEST view of the landing. I believe that the
Hillside, like the East Shore, is open for all unclassified missions. These
passes can be obtained by writing, as detailed below. Ames-Dryden employees can
also obtain them.

3. Official guest. Access to the Ames-Dryden complex. You get to watch the
landing from the ramp, which is right on the lakebed. (The Shuttle lands some

distance away, depending on which runway it uses.) The crew speaks to the crowd
just before they return to JSC. There are special aircraft displays (including
the SR-71, F-15, F-18, X-29, etc.) in the hangars. The radio transmissions are
broadcast. This method is only predicted for a few missions this year. Opening
the Facility is fairly labor-intensive and very disruptive, so we won't do it
for every possible mission.

You can write, as detailed below, to obtain these badges and parking permits.
To obtain a hillside pass or official guest badges, write to:

NASA Ames-Dryden Flight Research Facility
Public Affairs Office
P.O. Box 273
Edwards CA 92523-5000

Do this early, because there is a limited amount of space. If you get these
and then discover that you can't attend, please try to pass them on to someone
else who can use them. Incidentally, there is _no_ charge for any of these.

William Daul (billd@informix.com) suggests it is quicker to call your congress
person and ask for a VIP pass. They usually have you pick the pass up
somewhere near Edwards.

Come see the Shuttle land--it's great. Wear warm clothes!

If the Shuttle lands in the morning, it will be cool to downright cold. Forget
the myth that the desert is always hot, it may be in the low 60s even in the
summer at sunrise. It's frequently freezing in the winter. If it's much
warmer, it's because the wind is blowing.

However, if you're an Official Guest and will be hanging around until the
Astronaut Departure Ceremony, it may be warm by then. Wear layers.

Especially, wear warm footwear. Official Guests will be standing around on the
cold, cold ramp and all your body heat will seep out of your feet into the
concrete heat sink. Running shoes work well. Hillside Guests will be sitting

up on metal bleachers. The portions of their anatomy in contact with the
bleachers (feet and seat) may get _real_ cold.

Here is a list of Freqs for the White Sands Missile Range

Military Police: 36.100 141.250
Laser Operations: 173.5625
Drone Operations: 164.500 172.400
Cooling: 168.000
Maint: 34.490
Missile Tracking: 412.875
Range Control: Channel 1 36.510
Channel 2 34.850
Telemetry: 38.450, 38.710, 38.950, 40.100, 41.450
Photography: 30.090, 41.430, 139.440
NASA operations: 34.310, 164.100, 169.075, 169.400

SSME Test Firings (thanks to David.M.Seidel@jpl.nasa.gov)
==========
The Stennis Space Center in Mississippi does Space Shuttle Main Engine (SSME)
test firings, which, if I understand correctly, can be viewed by the public.
Try their public affairs office for details. The Marshall Space Flight Center
in Huntsville, Alabama also has an SSME test facility where you may be able
to view the firings.

Press Site Passes
==========
If you can convince a local newspaper to write you a letter of accreditation,
you can be a official Press/Media representative. This allows you much
closer viewing, and material from NASA on the mission. The Press Site is
just east of the "Dome" at LC-39 near the VAB. The shuttle while on the pad is
obscured from view by the launch towers.

Requests for accreditation should be mailed/faxed to the accreditation
secretary two to three weeks prior to launch. The request must be from a
credible media source and it must be on company letterhead stating the
requester(s) full names, social security number, affiliation and purpose (i.e.
John B. Quick, 111-22-3333, Time Magazine, photographer). The letter must be
signed by the requester's supervisor/editor/or person in charge. All calls

concerning accreditation should be given to Leslie. These requests can be
faxed to (407) 867 2692. After you are accredited, you can call the Media tour
info number, (407) 867 7819 for Photo ops, remote camera setups, etc.

Public Affairs Office
Attention: Accreditation
M/S PA-MSB
Kennedy Space Center FL 32899

Call (407) 867 2468 a couple of weeks after submitting the letter to make sure
that your name is on the list as an accredited press type person.

Barge Turn Basin Passes (KSC Visitor Center News for 16 February 1996)
==========
This a new site at the LC-39 Barge Turn Basin (physically adjacent to the Press
Site) for NASA and contractor employees deserving special recognition for their
support of KSC's human space flight program. Each pass is for a vehicle. As
with other VIP viewing areas, launch commentary, bleachers, restroom
facilities, and food and souvenir sales will be provided. The pass will be
valid for entrance through KSC gates two hours before launch for vehicles no
larger than a 15-passenger van. A badged employee must be in each vehicle.

VIP Passes (Peter Armstrong, Julie Clements and others)
==========
Astronauts families and other VIP's over 12 years of age are situated at the
VIP site 1.5 km north-east of the VAB and away from the press. The site is only
5.3 km from Launch Pad B, and 6.2 km from Launch Pad A. It offers great viewing
of a launch and is near the site for the new Apollo exhibit site which encloses
a Saturn V. You can see the backside of Pad B and therefore don't see the
initial ignition very well. Families with children under 12 and any overflow
from the VIP stands are sent to the Static Test Road site (which is considered
to be a VIP site).

The day before launch, the VIP guests are taken for personalised bus tours of
the Launch complex. During this bus tour, they will actually drive you

to right
outside of the fence of the Launch pad and let you out to take superb close-up
pictures. But if it's raining, you're out of luck! - the Rotating Service
Structure will be in the way. But, no matter what, you will get *much* closer
than the KSC Visitor Center (formerly Spaceport USA) busses get! You also drive
past the Vehicle Assembly Building, Launch Control Center, Shuttle Landing
Facility, crawler transporter, and other neat stuff.

The day of the launch, you're transported to the VIP launch stands via bus from
the parking lot of the KSC Visitor Center (crew guests meet at a predetermined
location off-site). The site is broken up into three viewing areas. At the
southern-most tip, the astronaut families and friends are given one set of
bleachers. Next are the bleachers for the guests of NASA administration.
Included here are astronaut guests who are not close family or friends.
Continuing to the north there is a path that takes you to the Saturn V Center.
There is a set of bleachers here that are only accessable by going through the
building. Each person is given a coloured button which indicates which stands
they are allowed in. About ten minutes after the launch the buses return and
take the VIPs back to the KSC Visitor Center. From there, VIPs must contend
with the traffic themselves, which is filled with all the people coming from
the Causeway and Static Test Road sites.

VIP passes may be obtained by writing to your Congress representative.

Relatives and friends of the astronauts/experimenters for a given mission may
be invited, as can those of other NASA officials. International visitors
wanting a VIP pass need first contact their embassy in the US.

Getting a VIP pass is not simply a matter of calling your favorite Congress
person or Senator and asking for one. There is certainly no harm in doing so,

but asking for one does not guarantee that you'll get one. Request your pass or passes at least 3 months in advance. Asking for a VIP pass even a month in advance is just about hopeless. NASA puts together the VIP guest list for a launch way in advance. Actually, you are not requesting a VIP pass, you're requesting a VIP invitation. All VIPs are invited guests of NASA. So, the process is that you ask to be invited, then they invite you, you accept via RSVP card, then they send you the necessary instructions. If you are invited by NASA HQ then a vehicle pass for KSC Visitor Center is included in the invitation itself.

When you write or call your Senator or Representative, be very specific. State the STS number and the target launch date for the launch you want to see. Realise that you're asking for quite a privilege, so be respectful and don't have a demanding tone. You at least want your request forwarded to NASA HQ (the Congressman or Senator does not approve your request themselves). Whether or not your request is approved by NASA HQ is, in part, a function of how many VIP invitations have already been issued. If the Banana Creek site is full, you may be sent to the Static Test Road site instead. The Static Test Road site is also the only VIP site available for families with children under 12.

VIP passes are on a per-person basis, meaning that you'll need a pass for each person in your group. The easier-to-get NASA Causeway passes are for a vehicle, with the only restriction being the size of the vehicle, not the number of people in it nor their age.

Static Test Road Passes (Peter Armstrong)
==========
This site (just north of the causeway on the cape side) is accessable only via a "Static Test Road" pass. The official NASA policy is that the STR site is an "overflow" location for the VIP site and the location for families with

children under 12--nothing more, nothing less. To get to the STR site one must
be nominated by an astronaut or member of Congress just as they would if
desiring a VIP pass.

Gold Passes
==========
These are reserved for guest's of the Kennedy Space Center director. You can
basically go _anywhere_ your guide can take you. You generally have to be a
guest of the KSC director to get one of these.

Forward Fireman Team (T.E.Thacker, Jr)
====================
The absolutely positively best place is to get yourself a place in the Forward
Fireman Team. This is an exceedingly rare thing to come by and takes
considerable political pull but it has been done. This team is the group that
parks 1650 metres from the pad in one or more Armored Personnel Carriers ready
to go in and aid a crew abandoning ship in an extreme emergency. Needless to
say they can tolerate only one or at most two extra persons in and among them.
You stand a better chance if you have had any kind of fireman training -
especially fighting shipboard fires (like Naval veterans) - because then you're
more likely to be actually *useful*.

The noise at that distance is no longer noise. It's just one great big horrible
screech. Also, the heat off of the yellow-white hot SRB flame columns is so
terrific that you have to wear those silver colored fire-proof suits and head
coverings. You don't dare leave a camera by itself on a tripod without heat
foil covering because it will likely melt or at least burn up the film inside.

Viewing from the LCC (thanks to Joe Mize <jmize@globe-net.net>)
====================
I work in the VAB and watch as many launches as possible from outside the LCC,
Launch Control Center 5 km from the Pads. No one is allowed closer than this
because of safety and "Medical" reasons, the sound levels during

launch closer
than 5 km will cause hearing loss and other physical damage. There is
a "Dead
Crew" who work closer for safety assistance, they have special
reinforced and
sound proofed bunkers. The reason for their name, "Dead Crew" is that
there is
a high risk doing this job. No one has been lost so far.

During launch the popping heard is caused by the solid rocket booster,
SRB's
burning their fuel and atmospheric compression. There is no control of
the SRB
burn rate, light it up and off it goes. The uneven burning of the
solid fuel
contributes to the popping sound. "Uneven" is a harsh sounding term,
but it is
just that although the burn rate has been precisely calculated there
are
variances. Close up, on the NASA NET replays, somethines you can see
pieces of
fuel not completely burnt coming out of the fire stream.

Sometimes, dependent upon the weather the sound can be exceptionally
loud, high
humidity, or practically non existent in comparison because of low
humidity and
wind directions.

At the 5 km limit you can feel your pants and shirt vibrating against
your
body. Open you mouth and you can feel the vibrations in your lungs.
Building
fire alarms and car burglar alarms are set off because of the
vibrations. The
VAB is covered by huge corrugated sheets which vibrate and start to
squeak
during launch. It almost sounds like a scream.

No wonder everyone cheers at launch...

Johnson Space Center BBS
==========
The Public Affairs Office at the Johnson Space Center operates a BBS
to provide
information to the public. Check this board for updates to the
Keplerian
element sets during the flight. To access the BBS, call +1 713 483
2500 using
1200 baud (do NOT connect at 2400 baud), 8-N-1, at the ENTER NUMBER:
prompt,
enter "62511" and you will be connected to the BBS. Direct dial
numbers are
+1 713 483 2419 and +1 713 483 2278. Check file area 30 or 99 for

latest
element sets.

NASA JSC's Electronic Space Information BBS is intended to provide
24-hour
access to biographies of NASA officials and astronauts, news releases,
space
flight mission press kits and television schedules, space shuttle
systems
information, flight manifests and schedules, and other information
about the
space program.

Additional X-Windows information and can be obtained by anonymous ftp
to
krakatoa.jsc.nasa.gov or 139.169.31.12. Donations: Much of this
library
is comprised of donations by local contributions. We encourage all
donations
concerning X windows such as widgets, programming tools, and other
applications.

Marshall Space Flight Center Spacelink
======================================
You can also access: THE NASA Spacelink, Huntsville, Alabama, 24
Hours. Has a
great deal of information about NASA's space program, including press
releases,
shuttle status reports, shuttle press kits, and images.

WWW http://spacelink.msfc.nasa.gov
Modem Calls (205) 895 0028 (8-N-1) (Up to 14.4 bps)

Science, Technology and Classroom Demonstrations
==
Call Argonne National Laboratory 708-252-8241, or Internet
newton.dep.anl.gov
or 130.202.92.50.

Jet Propulsion Laboratory
=========================
Anonymous ftp to ftp.jpl.nasa.gov or by dialup modem to +1 (818)
354-1333, up
to 9600 baud v32/v42bis/MNP5. The www address is
http://www.jpl.nasa.gov .

CD-ROMs
=======
For more information on CD-ROMs, telnet to nssdca.gsfc.nasa.gov,
username:
NODIS (no password). For a hardcopy catalog phone (301)268-6695 or
send email

to request@nssdca.gsfc.nasa.gov and ask for the "NASA Earth and Space Science
Data on CD-ROM."

NASA Press Releases
==========
NASA press releases and other information are available automatically by
sending an Internet electronic mail message to domo@hq.nasa.gov. In the body of
the message (not the subject line) users should type the words
"subscribe press-release" (no quotes). The system will reply with a
confirmation via E-mail of each subscription. A second automatic message will
include additional information on the service. Questions should be directed to
+1 202 358 4043. NASA releases also are available via CompuServe using the
command GO NASA.

KSC Press Releases and Status Reports
==========
To subscribe to KSC press releases send an email to domo@news.ksc.nasa.gov
with the message "subscribe ksc-press-release" (no quotes). To subscribe to
Space Shuttle status reports send an email to domo@news.ksc.nasa.gov with the
message "subscribe shuttle-status" (no quotes).

JSC Press Releases and Status Reports
==========
Johnson Space Center Mission Status Reports are available automatically by
sending an Internet electronic mail message to
jscnews-request@listserver.jsc.nasa.gov. In the body of the message (not the
subject line) users should type "subscribe" (no quotes). This will add the
e-mail address that sent the subscribe message to the news release distribution
list. The system will reply with a confirmation via e-mail of each
subscription. Once you have subscribed you will receive future news releases
via e-mail.

NASA Headquarters
==========
Anonymous ftp to ftp.hq.nasa.gov in directory pub/pao (has press releases,
shuttle status reports, and shuttle press kits).

Orbital Elements
==========
The most current orbital elements from the NORAD two-line element sets
are
carried on the Celestial WWW: http://celestrak.com/ and are updated
daily (when
possible). Documentation and tracking software are also available on
this
system. Element sets (also updated daily) and some documentation and
software
are available via anonymous ftp from archive.afit.af.mil (129.92.1.66)
in the
directory pub/space. As a service to the satellite user community, the
most
current of these elements are uploaded weekly to sci.space.news and
rec.radio.amateur.space. (thanks to Michael R. Grabois,
orbit@ix.netcom.com)

Brian Rehm (Rehm@serv512.gsfc.nasa.gov) and Peter Armstrong tells us:

http://spacelink.msfc.nasa.gov/Instructional.Materials/Software/Tracking.Elements

also contains the latest orbital elements. There is also tracking
software
available here for both Macs and PCs.

There's a list of some 4100+ elements posted weekly at

ftp://kilroy.jpl.nasa.gov/pub/space/elements/satelem

You can also access a very large catalogue from a site at the Goddard
OIG bbs.
It's number is +1 301 262 6784.

You won't find the elements for _ALL_ the objects out there, but you
will find
a much larger list at ftp://seds.lpl.arizona.edu/pub/sat/satelem. The
files are
UNIX Z-compressed and have over 3000 objects. To decompress them, just
leave
off the .Z when ftping them.

Eric Kaercher (astyanax@ddi.digital.net) & Gary Morris (garym@cts.com)
writes:

The latest element sets for Shuttle flights and the MIR space station
(and
someday for Alpha) can be found at
http://www.cts.com/browse/garym/elements
Elements can also be obtained from several NASA web sites
(shuttle.nasa.gov,
spacelink.msfc.nasa.gov, www.osf.hq.nasa.gov,
oigsysop.atsc.allied.com), ftp
sites (garc.gsfc.nasa.gov, archive.afit.af.mil) and other mailing

lists (AMSAT's
KEPS list, etc).

Teaching Material
=================
If you are or know a teacher, and they would like some teaching
material
posters or pictures, have them write to the following address with the
pertinent information:

NASA
PA - ESB
Kennedy Space Center FL 32899

To receive the "NASA Report To Educators" and other NASA publications,

Yeah, better to stick with 19th century communications and then wonder why
the amateur population is dwindling down to nothing, as the FCC takes
frequencies away from hams.

1176. ISS Downlink

Does ISS have any beacons or any other downlinks?
Or, yes, I know it has, but anyone got any freqs? :)

====================
Huh -- as of April 2000 there are 678,539 US Hams
(http://www.speroni.com/FCC/Licenses.html)
In 1992 there were 524,782 US Hams (RAC CALLBOOK)

Hardly dwindling fast

The current US population is 274,745,387 (http://www.census.gov/)
The US population in 1992 was 254,994,517
(http://www.census.gov/statab/freq/99s0002.txt)

Would you care to do some math about growth rates?

This does not allow for the effects of the change to the ten year
license. It also does NOT show how many hams are inactive. Check the
stats for the ages of hams, and you'll find that the ham population is
mainly Old Farts. We're not getting nearly enough new blood to keep the
hobby vital.

The frequencies suggested by the amateur community are as follows:

2 meter
145.8Mhz downlink
144.49 uplink

70cm
437.5 - 438.0 Mhz segment 1
435.7 - 435.8 Mhz segment 2

These frequencies are taken from the March April AMSAT journal

Glen, your argument is their argument. What you see as a problem (not enough new hams), they see as a benefit. They're not interested in keeping the hobby vital. They've got their's, and the world ends when they die, so they don't care about growth and new, changing (Change!!) technology. Less hams means less competition for THEIR frequencies. If you study history at all, take a look at what happened in the late 1930's when Billy Mitchell proved that airplanes could sink ships. He got courtmartialed. The no-cw?-over-my-dead-body crowd would like to courtmartial (drumhead?) all us new hams for rocking the cw boat. There's no point in arguing with them (they love that, gives them a soapbox). Just ignore them. They'll be dead soon anyway.

And I'm 47, no spring chicken either. Had a novice ticket back in '71, but as you know, they were only good for a year back then, and an all-expenses paid trip overseas courtesy of good 'ol Unk Sam got in the way of my upgrading. (Ever tried to send CW with an M-16? And I sure didn't want a QSL from the guys on the receiving end!!) So here I am 29 years later, getting back in. But calander age has nothing to do with it, it's your mental age. And if your mental attitudes are set in stone, then your thinking will be stone age. Some of the youngest guys I know are 20-30 years older than me. And I also know a couple of 30 year old "Old Farts"

I agree with Mark, the worst ting the new ham upgrades can do is to NOT get on the air and use their new freqs. If the ole timers fon't want to talk to you because of your /AG or /AE call then tune to a different freq and talk to someone else.

But, of course, restructuring has taken care of the "Old Fart" problem, so this is no longer an issue. The "new blood" will be flocking in droves to the door very soon now. Stop worrying. It's all taken care of.

I wish that were the case, but considering the fact that
basicaly few beyond the ranks of ourselfs the existing pool of hams
KNOWS of the changes means that it is hard for them have much long
term effect

As for the rest, you make my case.
All others, go to www.eham.net and take alook at the article "Three Types Of Hams". B.K> seems to be a classic type1.

Twenty years later packet is still 1.2 thousand baud and my dialup
connection is 56 thousand baud and it's unregulated and doesn't need a
license to "operate". Zzzzzzzz . . .
>
> Slow-scan TV
>
Slick. Forty years old and is 20x slower than the 1930s flying spot
TV.
>
> APRS, for starters.
>
. . . there's a real mindless gooder. I have a GPS rcvr, I have a
mapper and I don't need ham radio to get me from here to there. GM and
Toyota have been putting a far more advanced interactive form of APRS
in car dashboards for years.

Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc

This balloon launching from southwest New Hampshire will drift roughly
along the border of New Hampshire and Massachusetts as it moves toward
the coastline not too far from Boston. The coverage could easily
include all of the New England states and beyond at its peak altitude.

Foxhunters/trackers could well enable the quick and successful
recovery of this balloon payload.

Full GPS telemetry will be transmitted, as well as balloon measurement
data. It may also be possible to connect to the launch crew by
packet through the balloon.

We have at HABLIC a CAPSAT coverage map based on expected line of sight
range, as well as all the relevant data and handy links for these upcoming
projects (check the nice CAPSAT webpage for detailed packet procedures).

May 9 CAPSAT southern New Hampshire
May 13 Delaware Rockets for Schools Delaware
May 13 or 14 SkyQuest experimental launch eastern Massachusetts
May 20 or 21 SkyQuest 3 eastern Massachusetts
May 27 BEAR 1 Alberta, Canada

You got it. There will be a heap of upgrades over the next few months,
maybe a new ham here and there and back to business as usual with some
new voices on 20m ssb. Of course it also makes life even easier for
the FCC which was the only point to the whole thing from the gitgo.

Hi.

Does anyone have (the file or URL to) the recording of JY1/King Hussein in QSO with Dr. Owen K Garriot / W5LFL on board space shuttle Columbia/STS-9? I know I found it once, but alas have lost the URL when changing computer.

If your still have your orignal Novice license you might want to check the length it was valid. Mine is from that ancient era and says 2 years non renewable. Then they made it 5 years renewable and then 10 renewable.

While I do not have much use for CW, it is fun to drag the QRP rig out into the woods every fall and see if I can still talk to the world on 2W.

Not to fan the flames any more, but SSTV was invented by a University of
Kentucky grad. He did his doctorial on it. Use the (then ham) 11Mtr band.
In 1957 or so it was the newest technology. I have read and should have a copy
of his desertation. Interesting given the technology he had available to work
with.
Do a net search on Capehorn Mcdonald sometime. I
only hope I have spelled his name correctly.

My Novice license is from 1973 (FCC form 660 - July 1972) and looking
right at it here it says 'Effective Date 04-07-73' , 'Expiration Date
04-07-75.' There's also an outlined box in the upper right hand corner
that says 'Not Transferable.' There's no mention on my license about
it not being renewable but I don't think ?? it was.

Radio Meteor Observation Bulletin No. 81 May 2000

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: Biedenkopf C2 TV, Video Frequency 48.250 MHz,
ERP 100 kW, Azimuth 90 +/-65
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: own written software "MSD" with sound card.

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.24 MHz
Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: CW
Recording method: listening by ear

April 2000

Notes:
. no corrections for radiant position made to the counts.
. - = no observations made.
. * = interference

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the Ghent University format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

-------------------------------------------------------------------------
Location: Astronomical Observatory, Ghent University, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

```

Notes:
. the Lyrids show up nicely, notwithstanding the current constraints.
. also noticeable is the slight increase towards the end of the month
which continues in May (apparently starting slightly earlier than
during the previous years).

Pierre De Groote

Observer : Rafael Haag
Location : Porto Alegre, Brazil (51 10' W, 30 30' S)
Frequency: 83.25 MHz
Receiver: home made convertor, 1.5 dB noise and Sony ICF-7600G as FI.
0.2 uV for 10 dB S/N
Transmitter Location: many stations, video carrier C6
Antenna: 2 element Yagi, elevation 90 deg (zenith)
Observing method: the audio signal of the video carrier is fed into PC sound port.

April 2000

Note: I think this is the first bulletin of a Brazilian Forward Scatter Meteor Station! From May or June onwards, the Radio Meteor Observatory will be operating permanently.

Rafael Haag

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.

Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km, direction south and 2) a 30 kW TV video carrier from Sicilia, Italy, distance 900 km, south. The total echo power of both transmitters is processed into same 40 Hz virtual receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, with manual interference rejection.
Sampling interval: one 4096 point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also available at http://www.qsl.net/oe8fnk this includes now also Es, FAI and radio fireball statistics, and the original leonids 1999 peak recordings.

The meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value, to show the reduced accuracy. Results for less than 20 min. observing time are excluded.

Counts of reflections longer than 3.5 seconds

Notes:
. Lyrids active from April 19 to 22.
. from April 25 the Eta Aquarids activity starts.
. local time conversion: 2 hours ahead of UT (6h local = 4 h UT).

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
LT = local time = JST = UT + 9 hours

Sadao Okamoto

-------------------------------------------------------------------------
Observer: Ton Schoenmaker
```

Location: Roden, Netherlands (06 26' E, 53 08' N)
Frequency: 55.275 MHz
Transmitter: Spanish TV channel E3 (video); transmitters in La Muela (30 kW),
Gamoniteiro (50 kW) and Aitana (60 kW); all stations within
100 Hz of nominal frequency; distance 1650 km
Antenna: 4-element horizontal Yagi, geographical azimuth 195 degrees (SSW),
elevation 15 degrees
Receiver: Yupiteru MVT-9000 in FM mode; sensitivity 0.5 uV at 12 dB S/N
Observing: audio signal from ear-phone socket was rectified, digitized
and fed into a PC via the parallel computer port. HP VEE was used
to process the digitized signal and to store 15-minutes counts of
reflections stronger than 0.06uV.

Sporadics in January - April 2000

Uncorrected hourly counts for signals stronger than 0.06 uV

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna: Comet made 50 MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is
received by a low frequency filter (880 Hz)and fed into
the D/A converter and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Yes, the ham population is dwindling now because they're not licensing hams anymore. They're licensing CBer's.

Mankind has been communicating with voice for thousands of years. We need to get back to communicating with newer modes like CW.

What the hell is wrong with communicating via the spoken word. Yes humans have been doing it for thousands of years, but we kept this form of communication for a good reason, it is efficient. I mean if CW mode was the most efficient mode of communication we would walk around carrying keys with speakers attached to them.

Now don't get me wrong. CW has its usefulness but voice communications are much more simple. Their is no "translateing" voice communications, but you have to "translate" code. Anyway that is my two cents worth.

Well, because CW is so good, because it can be used in emergencies and all, lets make all hams learn symaphores, marine flags, and how to shoe horses. After all, in an the right emeregency all of those tidbits could be usefull. A special not for the satire impaired: This was a JOKE!

While I have been a ham for 30 years, I still marvel at the BS that claims CW keeps out the riffraft. Not that anyone has asked me, but I would much prefer to deal with a person who technical skills are a little dull, then a whiz that is a jerk. IT is easier to help someone learn then to help a jerk be nice.

Yea, sure.

When that happens, I fire up my SCS PTC2e at 60wpm CW in
keyboard mode. :-)

Incidentally, PACTOR II works as well as (or better than) CW
at QRP levels and nobody tries to "display their superiority".

PactorII may well work better, but with my QRP rig, all I need is it, an
antenna and 12V and I am in business, no PC/TNC/etc.
Not that I am opposed to PC/TNC/etc, it is just fun to do somehting simple
and fun. No reboots. No QRM[at least from my end]
Are there any programs to allow a modest [P233/MMX Creative/Ensoniq
PCI sound card] to run Pactor II?

Except that none of those "modes" are in use on the ham bands.
Just whom would you communicate with using "semaphores, marine flags,
and horse shoes" on the amateur frequencies? Yet CW rivals SSB as the
most popular HF mode.

>While I have been a ham for 30 years,

Really? What was your first call? I'd like to check my 1961 Call Book.

>I still marvel at the BS that claims CW keeps out the riffraft.

No one's claimed that CW keeps the riff-raff out -- just listening to
certain 20 and 80 meter frequencies shows that even the riff-raff can
learn code. But you won't hear any of the riff-raff on the low ends of
the HF bands. The *use* of CW is the filter. Can you name any ham who
has received a NAL from the FCC for an intentional rule violation while
operating CW?

Amateur Radio is suffering from the same malady as the computer hobby. I have for a long time been a member of our company computer club and it is full of old guys now. Nearly everyone is retired and it is very hard to find people who can run for the top office (they must be active employees). Everyone thinks of radio and computers etc. as an appliance. It is something you turn on and use and don't tinker with. Many cell phone users use radio daily and never realize that they are. I became interested in SWL when I was young back in 1964 when it was a big deal to receive signals from far away places. Now I routinely converse with people all over the world on the news groups and think nothing of it. Until we can make the electronics hobbies look glamorus again we will not see a big influx of new members.

Absolutely amazing what my original post has come down to. I never sed " ac6v
<ac6v@ix.netcom.com> wrote:
><snip>
>> We're not getting nearly enough new blood to keep the
>> hobby vital."
========================
What I did say originally is:
====================
Huh -- as of April 2000 there are 678,539 US Hams
(http://www.speroni.com/FCC/Licenses.html)
In 1992 there were 524,782 US Hams (RAC CALLBOOK)

Hardly dwindling fast

The current US population is 274,745,387 (http://www.census.gov/)
The US population in 1992 was 254,994,517
(http://www.census.gov/statab/freq/99s0002.txt)

Would you care to do some math about growth rates?

Nah, it's long gone. All I remember is that it was expired when I got back. The FCC office didn't give a S--T that I'd been in no position to do anything about upgrading and the person on the phone made a snotty comment about govt. killers not getting any special treatment. I suggested that with an attitude like his he needed to be careful what he said to "govt killers" and hung up. A couple of days later I got a visit from an FBI agent concerning "threats" I'd made to a govt. employee. He was a much more reasonable person, and after listening to my story, told me not to worry about it, SHOOK MY HAND! and said thank you, and left. (If it sounds like that meant alot to me, it did!) But I figured it would be a good idea if I avoided the FCC for awhile. No matter, I'll get my upgrade now on my own merits.

I have a little 2 watt QRP 40/80MTR rig that I can "talk" much further on CW then with voice or RTTY/ASCII/SSTV/FAX.
It is very simple.
And it is fun.

I guess my novice license was from a 'really' ancient era (1966),
one year non-renewable.

1221. New Resource For Investors

Newsgroup: rec.radio.amateur.space
Date: 2000-05-09 00:00:00 UTC
From: meir@investmove.COM
Message-ID: <W6C623UA.IH527ZP6@investmove.com>
Source record: 9547

Hi,

I would like to introduce our new site and kindly request
that you add InvestMove.com <http://www.investmove.com>
to your Links/Resources page (or please forward this message
to the person who is responsible for maintaining your Web
site). This will provide your visitors with a very useful
and information packed resource. InvestMove.com allows
investors and analysts free access to vital stock market
information.

In recognition of its usefulness, InvestMove.com has been
awarded recently with the prestigious USA Today Hot Site award.

InvestMove.com features a unique tool that allows visitors to
enter a company symbol into a search form and obtain a customized
page covering more than 30 major information categories about
that specific company. The information includes: stock quotes,
stock performance, earnings estimates, stock valuation, company
performance, analyst opinions, broker reports, company profile,
and much much more.

Another feature of the site is an investor resources directory
that includes links to the best investment sites on the web.

Linking to InvestMove.com helps you to add value to your website
by presenting your visitors with a useful free investor resource.
Your visitors will find here all the tools and information needed
to make educated investment decisions, and it's all completely free.

In addition, links to relevant and popular sites are known to
increase a Web site's "popularity ranking" in some major search
engines. In other words, linking to http://www.investmove.com may
actually help increase your Web site's rank in certain search engines
that record this external link.

Thank you in advance

Meir Liraz,
InvestMove.Com

Now that is a statement I can't argue with. If it's fun for you, something
you enjoy, then go for it!! I intend to upgrade to General in the next
year and will probably get up to at least 10wpm code speed as a point of
pride. Already bought a Kenwood TS-440S/AT. The only problem I have with
CW is when somebody tries to beat me over the head with it to display their
superiorty.

Wow! That's an interesting observation and you sure did get me to thinking on whole different level. Computers and radios, and things like them, used to be "gizmos" that were new, interesting and fun to play with. They have now become utilitarian devices and the uniqueness, newness, and fascination with them has now become mundane.

That's an even harder battle to come out of, as well, in terms of keeping/getting people interested in hobbies like this. So much the more for demonstrations of what *can* be done with amateur radio. I hate to use the word, but we need to "exploit" the hell out of our rescue and emergency service, and whatever else I am leaving out (I think from the perspective of those things because that is my "bag" with radio).

Thanks, Ihad done a quick net search but came up fairly emepty.
I will have to keep my eyes open for this one.
AX25 was not the end all it was once proclaimed to be.
Especially on HF.

1227. Satellites on APRS??

Newsgroup: rec.radio.amateur.space
Date: 2000-05-10 00:00:00 UTC
From: Joe Schlatter <joe@schlatter.org>
Message-ID: <%GcS4.17775$vN5.7403794@news-east.usenetserver.com>
Source record: 9461

I have an old notebook computer, a 15-year-old 2-mtr xcvr, and a packet controller running APRS version 8.something 24 hours a day. Antenna is a vertical on the roof.

This morning when I checked the Heard list I found that the system had heard what appears to be several satellites. In fact, when I zoomed out on the map, I saw satellite symbols with station identifiers next to them. Never saw this before and I have been running this thing for 6 months now, 24/7.

Here are the satellites from the Heard list:
LO19
UO22
TO13
KO23
MIR
FO20
IO26
AO16
FO29
aprsdCOS
aprsdTUS
aprsdNYC
SV35

Why are these sats showing up on my APRS screen now when I never saw them before? Or, maybe I did see them before, I just never noticed them -- I check the Heard listing very infrequently.

FT847.

I had one of the first IC970 made and I was really dissapointed. The receive is bad for a radio of this price. The receiver suffers from intermod. Also, you can only transmit on the main band and you can only use the receive adjustments like NB etc on the main band. So this means that when you are using the radio as a satellite radio you cannot use the NB etc because you are using the main band to transmit. This radio is a overpriced boatanchor.

Hi Kim,

The president of our local club out here has come to exactly the same conclusion, and we are actively promoting the formation of ARES/RACES groups in our relatively new area. We are encouraging them to use our repeaters, and are putting new repeaters on the air to service the areas in greatest need. We'll see how it goes, but I think it definitely helps to create activities, and facilitate the need for the use of amateur radio.

I agree about CW being much better than having to horse around with a
computer or even a palmtop for portable / camping etc. But I did just
this week see a spiffy looking folding keyboard for one of those
devices, there's also several mini-keyboards available.

It's already gone Cecil. Ham radio is literally dying.
Average age for hams is 68 Yrs old.
Your correct above, and ham radio WILL be DEAD
by 2015. Stick a fork in it - it's done cooked thru and thru.

RIP: Amateur Radio 1917-2015

News Flash: New technologies will solve ham radio problems for everyone like it or not. FCC Licensing to use a consumer product like a ham radio is stupid, counter productive stifles innovation and keeps prices for gear artificially high. These FCC rules and regulations are ALL showing their age and the world is changing way too fast for antiquated systems.

Personally, I use a real neat device called a cellular phone for most things no license, no testing required I figured out how to use it all by my self. :)

1244. Question about rec.radio.amateur.space NG

Newsgroup: rec.radio.amateur.space
Date: 2000-05-12 00:00:00 UTC
From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <391CC431.64D75ED4@nettally.com>
Source record: 9403

Is this NG about Amateur Radio operations in space and Amateur Radio
satellites? I am confused as there seems to be a lot of unrelated stuff
here.

What you fail to realize is, inteligents and technical prowess
do not exclude abusers and criminals. Sure, crime is not
inteligent. Yet there are a lot a inteligent criminals out
there. Like the ones who disrupt the repeater clubs. You'll
never see them on "worlds dummest criminals". Stupidity isn't
the problem. Lack of character is.

So, a hard test isn't the answer. What we now have are a lot of
inteligent asses.

What is the answer. Enforcement, policing our own bands *with*
FCC support, Inovation and change so to attract quality people.
What do you think?

1247. make money

Newsgroup: rec.radio.amateur.space
Date: 2000-05-12 00:00:00 UTC
From: 4Roses@Access1.NET
Message-ID: <391B4C63.4DF3C8FD@Access1.Net>
Source record: 9474

Make $1000 of an initial $6 investment very easy, not a scam, really works!

Make Money Now! It doesn't get any easier than this. Just follow this awesome money making program, and you'll be collecting a nice supplemental income in no time. You don't have to buy anything! You don't have to sell anything! This is not a Paid To Surf Program or a Paid to Click Program. You don't have to surf the Internet for a ton of hours or click on little banners a million times. This program is fast, simple, easy, and most importantly....IT WORKS!

Mission: To make a one time investment of $6.00 and have it return to you over $6,000.00

The program really works! Read this testimonial first!
A little while back, I was browsing through newsgroups and websites, just like you are now, and came across an article similar to this. It said that you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a total scam." But like you and me, i was curious, so i kept reading. Anyways it said that you send $1.00 to each of the 6 names and addresses stated in the article. After you send the mail, you then place your own name and address in the the bottom of the mailing list and post the article in at least 200 newsgroups. No catch, that was it. So after thinking it over and talking to a few people about it, I figured, "what have I got to lose other than $6.00 and a few stamps?" So I decided to try it and I mailed out my measly 6 bucks. Well Guess What?! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. Mail after mail with a 1 dollar bill inside. In the first week, I made $25.00 - Wow, I already made back my initial investment with some extra lunch money. But next week came more mail. By the end of the second week, I had made over $100! In the third week, I had over $1200.00 and it was still growing. By the end of the 4th week, I had well over $6,000.00! I couldn't believe it. It was certainly worth $6.00 and 6 stamps. And the best thing - it's perfectly legal! Thanks a bunch to everyone involved!

Important: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!
Please note: Please follow the directions EXACTLY, and $6,000.00 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business

your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you asking to be included in that list.
4 Basic Steps to Success
STEP 1 : Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Write on each piece of paper your mailing address and your email address. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase with
your house and email address. What you are doing is creating a service. THIS IS ABSOLUTELY
LEGAL! You are requesting a legitimate service and you are paying for it! Any doubts? Please refer
to Title 18 Section 1302 & 1341 of the Postal lottery laws or call the US Postal office at 1-8000-725-2161.
STEP 2 : Mail the 6 envelopes to the following addresses:

1) Christopher L. Sloan
2200 Hickory St.
H.S.U. Box #14579
Abilene, TX 79698

2) Karen Lohning
155 Blue Spruce Ct.
Delaware, Ohio 43015

3) B. Stoltenberg
7149 Wynter Way
Indianapolis, IN 46250

4)J. Hanan
10871 Poyntell Cir.
San Diego, CA, 92131

5)Rob Barnes
14575 Spingvale st.
Poway, CA, 9206465t

6)Eric Larose
17757 Corazon Pl.
San Diego, CA, 92127

STEP 3 : Now copy this list and take the #1 name off the list that you see above and move the other names
up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as #6 on the list.
STEP 4 : Change anything you need to, but try to keep this article as

close to the original as possible. Now try to post your amended article to at least 200 newsgroups (chat rooms, message boards, guest books, bulletin boards...u know). You don't have to post 200, you can do more or less, but remember, THE MORE YOU POST, THE MORE CASH YOU MAKE! Keep a copy of these steps for yourself, and whenever you need cash, you can use it again, and again.

PLEASE REMEMBER : This program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Loook at it this way. If you are a person of integrity, the program will continue and the CASH that so many others have received will come your way.

NOTE : You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes peple send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft. So, as each post is downloaded or read, and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousand of dollars!! What an opportunity for only a one time investment of of $6.00 and six stamps. Send it now, add your own name to the list, post it, and you're in business!

To make sure you don't get into trouble with Uncle Sam, make sure you declare your extra income. Remember, this is LEGAL> You are using the Internet to advertise your business. What is that business? You are creating a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be addesd to your mailing list. It is legal. What you do with your list of names is up to you. so build your mailing list, keep good accounts, declare your income and pay your taxes. By doing this you prove your business intentions.

How Much Can I Really Make?

Out of 200 postings (which should take no more than 1 hour) you receive only 7 replies (a very low percentage). So then you just made $7.00 with your name at #6 on the letter. Now each of the 7 people make around 200 postings with your name at #5 and 7 more people respond, you just made $49.00. Now those 49 people put up another 200 posts each, and still only 7 more reply from each person, you just made $343.00 with your name at #4. Following the same pattern, you would make $2401.00 with your name at #3, $16,807.00 at #2, and $117,649.00 at #1. And remember, that's only if 7 people reply each time!

Additional NOTES :

1) In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office, explaining the above statements (that you have an online busines, etc.). You may have to pay an extra tax, but that's OK, the amount of the incoming CASH is HUGE!!

2) You may want to buy mailing and email lists for future CASH, or

database of spreadsheet software.
3) You may eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. Just make sure all the addresses are correct.
4) If you're really not sure or still think this can't be for real, please print a copy of this article and give it to someone who really needs the CASH, and see what happens.
5) For a business to be successful, be honest and fair.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams should be 90% not 70%

Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Step 4: No-code license should be one year non-renewable.

Step 5: Remove negative influences by disbanding the ARRL.

agree here.

> Step 2: The passing score for written exams should be 90% not 70%

sure, why not.

> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

HA! How does THAT make things better! Go back to the stoneage, fool.

> Step 4: No-code license should be one year non-renewable.

Why?

> Step 5: Remove negative influences by disbanding the ARRL.

That is the best suggestion yet.

1260. Question: Innovation in Amateur Radio

Newsgroup: rec.radio.amateur.space
Date: 2000-05-12 00:00:00 UTC
From: Kevin McQuiggin <mcquiggi@sfu.ca>
Message-ID: <391C479A.ED335B9A@sfu.ca>
Source record: 9487
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.antenna

Hi Folks:

I've been licenced for 23 years, currently VE7ZD, and am in graduate school up here near Vancouver, BC.

I'm researching amateur radio and its history. I'm specifically interested in inventions, discoveries, or techniques that were developed within amateur radio and later spread to the electronics industry. Similarly, some of our operating techniques and procedures were later widely adopted by other services.

Hams operate outside of the structured environments within industry, and I think that this freedom has permitted us to invent and discover without being shackled by any policy issues, or possible stigmatism from investigating things that would be considered "too far out in left field" by management and non-ham co-workers.

Examples would be the investigation of wavelengths below 200 meters, with the discovery by hams that such wavelengths were better for propagation than longer waves; packet radio; APRS; propagation studies that were undertaken in the 20s and 30s; facsimile; SSTV; and network operating techniques.

Some of this stuff was regulated, such as the banishment of amateur radio to the "useless" wavelengths < 200 M, but this sort of proves my point. There's been lots of innovation within the hobby, and the general public now benefits from it.

If anyone could provide me with more examples, or good books or articles on this topic, then that'd be great. Of course I'll give appropriate credit to those who assist!

If you could email me as well as posting your reply, thanks. There's lots of traffic in these groups and I don't want to miss any replies.

73,

Kevin VE7ZD

How about if I start you off with a pointer to a piece by the guy who invented SSTV, Copthorne Macdonald, VY2CM, in his own words. SSTV was invented at the University of Kentucky, in Lexington, Kentucky.

http://www.ultranet.com/~sstv/history/

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

Packet radio already existed. Somebody (I can't remember his position
or whether he was a ham) in what was then the Department
of Communications here in Canada, with a name like deMercado, had had
some experience with Aloha Net in Hawaii. He decided it was time
for hams to move forward, and so he changed the rules in Canada to
allow packet radio, and introduced the Digital License. That license
carried no code test, but what was said to be a more complicated
theory test, and was VHF only, maybe restricted to certain bands. I
thought there was also a segement or two set aside for packet that
only Digital License holders could use. I remember he came and talked
to one of the local clubs in 1977 or 78, so long ago that the details
are vague.

So it's debatable how much ham radio influenced packet radio. On
the other hand, I don't dismiss the value to some individuals, who
got it going in ham radio and played with it, and used that
experience in the commericial area.

I think the influence of ham radio on technology in recent years has diminished. That's less important than whether it is still affecting the young, getting them interested in electronics and radio at a young age and providing them with a place to play with these things.

But up till a certain point, ham radio was basically synonomous with electronics and or radio. You don't have to go any further than Howard Armstrong, who was a ham first and it could be said his work was nothing more than an extension of ham radio, even if it influenced radio tremendously; regeneration (and regenerative receivers) the superheterodyne receiver, the superregenerative receiver and practical FM. You can't do anything in radio without one or more of those things.

A lot of the oscillator circuits are named after people who happened to be hams.

I thought practical narrow band FM for two way communication came from a ham, something like the guy who started Sonar, but that is based on some remembrance.

Amateur satellites certainly must have helped the field. The first OSCAR went up only a few years after Sputnik and must have cost significantly less. The concept of a piggyback launch came from OSCAR, and certainly others have taken advantage of that. There have in recent years been "OSCAR-type" satellites, ie relativley simple and inexpensive, which have probably been mainly experimental but have either helped provide a training ground for satellite work or helped "third world countries" in some way.

And you can find examples of hams supplying practical experience (gained from the hobby) in some of the important projects of the last century. I can't get to it easily, but I read a book about Benchley Park during World War II where they worked on what the other side was doing, and the author mentions right at the end the importance of hams in the practical experience they brought to the process. I think there was a similar mention in a book about radar development during WWII. People would come out of the universites, and know all the theory, but be lost when it came to practical work, but hams had that down because of building their own equipment. And of course when WWII started up, hams ended up filling various technical roles in the armed services.

I thought the first person to play with radio astronomy was a ham. If it was't someone who followed up was.

The US Army tried moonbounce in the forties or fifties, but they needed big arrays and lots of power. Hams followed, using much simpler equipment. I'm not so certain moonbounce has much practical use for society other than hams, since others can put up satellites while hams are somewhat limited, but the process of advancing the art may be as important as whether the technology actually migrates elsewhere.

A lot of the history has been written. The ARRL had or has some books on the history, including that one about "200 meters and down...". "Empire of the Air" by Tom Lewis (and it was a Ken Burns PBS show some years back) dealt with Armstrong, Sarnoff and DeForest and probably is fairly available. There was a book about Armstrong, I can't find my copy right now, first published in the fifties and then in the sixties by Bantam Paperback, that I've found in used book stores that provides good, though not too technical, coverage of his life.

Since you can now get QST easily on CDROM, it would be worth getting the early years, actually get the whole set if you've got the money, and then you can see the history unfolding as it happened. The other ham magazines may not be as useful, since they came later, and more important they aren't as available so cheaply or conveniently.

Once you have the ham history, then you can start exploring where it fits into the rest of electronic/radio history. Whether it was simply implementing something discovered elsewhere, or had impact on society beyond ham radio.

And you might want to dig up an article by John W. Campbell (yes the legendary editor of Astounding/Analog SF magazine) who was a ham and once upon a time wrote some technical articles for CQ. He once wrote an article about "How to be an Amateur" pointing out some of the benefits hams have to innovate for the simple reason that they aren't bound by corporations. I think it was published in an early issue of 73, and then reprinted once or twice. 1971 comes to mind.

Want to guarantee the economic end of ham radio? Because if a hobby becomes
a chore, people will defect in large numbers to the Internet, etc. - and no
manufacturers will remain to provide either new gear nor a lobbying base.
The present licensing system anticipates that those licensed will know
enough to stay out of trouble in whatever "specialty" they gravitate to - like
the wife of a ham who just uses two meters to keep in touch with him.
We don't even require that kind of licensing for drivers or lawyers.

WE TRIED THIS ONCE ALREADY SPORT.

IN 1965-67

IT WAS CALLED "INCENTIVE LICENCING"

IT WAS A MONMUNTAL DISASTER FROM WHICH WE
HAVE NEVER RECOVERED.

self.

You also pay thru the snout for that service.

It sounds like you aren't really intersted in learning the technical
details of radios. I don't think ham radio is for you.

But if we start setting up hi-speed digital wireless communications
networks - are you going to change your tune?

> What do you think?

I agree. The problems evident on the bands arising from a lack of knowledge and expereience are insignificant compared to the problems caused by people who know, or should know, better.

I haven't seen any statistics where there is any indication that the higher the licence grade, the lower the problem per licencee group. I must admit that I did this about 4~5 years ago and more recent surveys may indicated otherwise. I seem to recall somewhere that the FCC took a similar view in relation to some aspects of the licence grades in the recent discussions about licence testing, but I'm happy to be corrected if my recollection is incorrect.

As to innovation and change being required to attact new Amateurs, I think that even without any change, it would be possible to attract good quality Amateurs with more effective promotion of the hobby. Of course, critically assessing and modifying the existing regulations and attitudes won't hurt either.

Mark.

Are you intending to send him/her a private email? Perhaps that's why
he/she don't give one. ;-)

More seriously though, when I post with my home email address, I get
heaps of crap from organisations that skim the addresses. I just delete
them, but that sort of thing really bugs some people. I don't even look
to see if mail comes the mj-deja.com address, so I don't care how many
times it gets picked up.

I think that the ideas presented by a poster either have merit, or
don't. A valid email address doesn't make it any more sensible if it is
stupid or any less credible if it is well thought out.

Having said that, using "Integrity" does seem a triffle pretentious to
me. :-)

WOW, what an eloquent response. Is "73" your age or IQ grandpa?

To the other posters who replied, count me in on high speed, high bandwidth networks but I'm not holding my breath. As far as cell phone rates go they are constantly dropping (due to COMPETITION and a broad base of users) and in many cases they rival land line costs. I pay less than .07 cents per minute with Long Distance service included at peak times and I am positive that will be .05 by year end. Further, many big business users do even better than that.

I have nothing against HAMS but from my personal experiences as a newbie to the hobby (less than 2 years) is that there is not a whole lot of hobby left. Just a bunch of OLD FARTS reminiscing about the golden glory years (1960?, 1950?, 1930? what are the glory years). Guys move on, get over it time and technology march on. I go to local shows and it's the same thing, each show has a small number of exhibitor booths manned by guys who have ZERO people / marketing skills. These guys stand in front of what appear to be high school science projects gone wrong handing out literature that was embarrassing 10 -15 years ago. I see young people and potential HAMS walk the show floors and leave because these same OLD FARTS are busy bullshitting with each other and don't do anything to appeal to a younger more educated, sophisticated users.

Most are bunch of mom and pop companies selling crap they assembled in their garage and pass off as "state of the art equipment" circa what year 1959? Software with so many bugs that most are unusable, many still being written in DOS??? Trade Magazines that are riddled with self promotion, substandard copy, and the worst layouts and ads I have ever seen. I wonder if any of these "publishers" ever hear of QUARK, PAGEMAKER, INDESIGN? Shit, I can't believe my eyes is it really 2000?

So I ask you as a potential member to your beloved HAM community why should I care what happens to it. I have fun with my scanners, especially my AOR 8K, my FRS radios, and my computers! I love to tinker with an learn about electronics and mechanical things but even with an outside antenna on my roof in a major city I barely scan any HAM radio transmissions. Sorry, guys your hobby is not dying its in full fledged cardiac arrest :)

Thank heavens Wouff Hong is just a wild radical with innane ideas that aren't taken seriously by anybody that actually has decision making powers in these manners... most importantly you can give up on #5. I must agree with cecil; if your goal was to annihilate the amatuer radio service, that agenda will surely do it.

Well, that would certainly remove a slab of people, I would expect, but for what purpose? Can you demonstrate a need to do this? If not, it serves no practical purpose. You would need to provide pretty bullet proof reasons because the legal costs, logistical overhead and costs involved would be enormous. I doubt any outsider to Amateur Radio, such as the regulatory authorities, could be convinced that this served any useful purpose.

> Step 2: The passing score for written exams should be 90% not 70%

Such levels are arbitary and would probably be the easiest to implement IF you can show that there is a practical requirement for it. By that I mean you would need to demonstrate that there would be a noticeable outcome on the Amateur bands. I suspect that you would be hard pressed to provide it.

> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

For what purpose? Morse is not mandatory, nor does it play any significant part in SAR or other community service operations. Again, you would need to provide some evidence that this provided something that could be explained to the govermental bodies administering the rules. Clearly they recently could not find any linkage between Morse speed and appropriate operating practices, so I think this one is also a "non-starter". Given the recent changes, a reversal would create an administrative nightmare that any bureaucrat would run a mile from.

> Step 4: No-code license should be one year non-renewable.

See comments on steps 1 & 3. Unless you can demonstrate the gains this would bring (to the regulatory authority), this is also a "dead duck".

> Step 5: Remove negative influences by disbanding the ARRL.

Tsk, tsk. I doubt you could ever do this (disband the ARRL). I'm not up on the US constituition, but I'd be very suprised if it didn't have a freedom of association clause somewhere. But, assuming that it didn't, what mechanism would you use to prevent people from joining an organisation on a voluntary basis? Not only is this horse dead, it has long since decayed.

0 out of 5 for practical suggestions, I'm afraid.

Mark.

Myth! Ham radio has never been a young person's hobby. Look back over the magazines printed decades ago - the pictures show a lot of older faces (and very few young ones).

Well, to be perfectly honest, I don't think you ever will be
interested in ham radio. You're too caught up in "whats new." You
can't turn your head away from the 'whats new" ads long enough to see
the advantages of what is already out there. Keep your blinders on,
don't try to see the advantages of ham radio, and you'll be just fine.

Correct DFwight, HOWEVER where you data needs to be
revised is found in the new licence applications. Their almost
zero. Number of Generals and Advanced calls dropping out
or not renewing: up 15%. Read Wayne's editorials in 73. He is
right I am afraid. FCC official figures and trends bear out a
stead decline in ham radio for the next 5 years, then an exponential
drop to 2015. (assuming historical baseline statistics and plotted trends)
I wish it were otherwise too, but what young person, meaning DROVES
of young persons want to spend ups of a thousand of dollars, take a
test on arcane theory, (worse yet...)-->code....just to talk to a bunch
of old men on HF, who double 6 times out of 10 when they transmit
and don't even realize it? (listen to 40 any time during the day and see
what I mean) We are OBSOLETE Dwight, a curisoity, perhaps a
resource to some, but technically and operationally obsolete nonetheless.

- Filter (kill) everything that is posted to other groups, it is just the
usual discussion about CW, license policies, etc. Not useful to read.

- Try to filter "for sale/auction" posts. Those guys just won't get it.

What remains is usually somewhat related to amateur satellites, e.g.
discussions about equipment that is usually used with satellites. The
satellites themselves rarely are the topic.

I tend to agree with you Dwight.
I'm not a ham and probobly never will be. Never had the discipline to learn code.
Sometimes, code can get through where voice can't.
Listening to some of the hams on my scanner talk about old times and what ham
radio
was back in the 30's 40's 50's 60's and 70's is a wonderful experience.
True, technology has changed. Where hams built radios, amplifiers, and antennas,
today's people are building computers, networks and whatnot.
Sometimes at a garage sale, I find an old shortwave receiver, with "8 transistor"
blazed on the front of it. Nowadays, it is all microchips and digital technology.
Newer hams with digital tuners can lock right onto a frequency.
They'll probobly never experiment with a <good God should I say it?>
old fashioned dial tuned radio with the little stick in a window showing you
what "frequency" you're on. Their loss.....
Many people depend on ham radio and don't even know it.
Storm chasers use ham radio.
What about natural disasters? Hams are usually the first to set up
an emergency network of radios to get messages through.
Remember when San Fransisco lost telephone service in many
neighborhoods as a result of the earthquake?
How about the current situation in Los Alamos New Mexico?
Hams are probobly getting traffic through, assisting law enforcement
and fire crews with communications. There is no substitute for experience.
Just my 2 cents worth....

Agree, but how often? Perhaps every 3-5 years a written exam would suffice.

>
> Step 2: The passing score for written exams should be 90% not 70%
>

I think 70% is a bit low, but I also think 90% is a bit high. Maybe 80%.

> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Forget this one. Code will be gone as a requirement very soon. Don't get me wrong, I don't think this is necessarily a good thing.

> Step 4: No-code license should be one year non-renewable.

Bad. Very bad for the hobby. If someone is happy with the no-code license and what they are allowed to do with that license, let them keep it.

> Step 5: Remove negative influences by disbanding the ARRL.

No comment here.

Wouff Hong,
Hows this for a suggestion? Instead of doing away
with the CW testing, lets add testing in the other modes!
We could have CW testing, RTTY testing, SSB testing, SSTV
testing, PSK31 testing, FM testing, Packet testing, and???
That should settle this whole obsolete/antique/unused
misconception about the different 'modes'.

What purpose would this serve?

I can understand retesting for say, a drivers license, as the loss
of those skills can kill someone. But retesting for HAM? Why?

> >
> > Step 2: The passing score for written exams should be 90% not 70%
> >

Indeed promtotion of the Hobby is the critical feature the
current changes are by and large unknown to the General Public, Indeed
the general public in my experence, if they know that CB and Ham radio
are different things, still don't know such things as the fact it has
been possible for the last ten years to obtain ANY license without
code testing (indeed I was amoug that group till 3 years ago

This IS just barely possible, but it would take declaring that
ARRL was on a worse level of threat to NATIONAL security than than was
the Comunist party during most of the Cold War or on the same level as
the Bund (American Nazi's during WW2) or the Japense Americans of the
same period

It can be done but what would be the point. The ARRL did not
make the recent changes, the FCC did.

Hope you take the correction in the sprit it was intended

gievn the ammount of change that occours in electronics etc
retesting in some form on our 10 year renewals would likely mean that
the current crop of Hams for example I know several Extras who do not
know the RF emissions rules as well as I do as a mere tech.

I think it would be an improvement, but we will see Liquid He
flowing through the street of Hell first

No code has not killed the hobby but its advocates sure seem
to be trying to kill it. The best case for NoCode is made by simply
looking at a creative minority of the ProCoders (creative minoroty a
large vocal visible group)

Well, I guess I don't see the same ham radio that you see. In my ham world, there has never been a greater demand for ham operators by all kinds of groups wanting support for their communications system, or lack of communications system.

And I've seen plenty of interest. In fact, there is not a week that goes by that I don't have to take time to answer somebody's questions about ham radio.

In my area, the numbers of ham operators is growing. The license exam sessions are full. And the new license holders seem thrilled with this hobby.

I guess people see what they want to see. I see a bright future for ham radio, while you see its ultimate end. I guess only time will show who is right.

Yes, I am a newbie so what? Am I not entitled to an opinion? I do know something about "it" because I actually tried to look for a reason and gave your "hobby" a chance and came to the same conclusion as many have. IT IS DEAD!

By the way idiot my ID is not misspell it is just the way I intended.

Thanks for making my point. I gave you my views of this "hobby" from my perspective as a newbie and as expected rather than give me a reason to join this hobby I get asshole comments like lenny-t's and dwight stewart with no substance or useful information. Kinda like the stuff I hear on my scanner when on HAM bands BLah, BLAH, BLAH, "I remember when, BLAH , BLAH , BLAH. If you guys can't even give me (a guy with exposure and experience looking for a reason to care) how the hell do you plan on "recruiting" newbies with no exposure or interest to HAM radio.

Oh, wait I guess you don't.

Kevin:

More Re: Marconi the amateur.

I have in front of me here a hard cover book "The wireless experimenter's manual", by Elmer E. Bucher, Wireless Press, Inc. 1920, LCCN 20-5750, LC Call Number TK9946.B85. In the back of the book is a tear out page which is an application form to join "The National Amateur Wireless Association", the fee for joining is $2.50. The address for the Association is given as 326 Broadway, Room 301, New York.

The head of this Amateur Association is listed as: Gugliemo Marconi, President
There is a National Advisory Board of Vice Presidents listed, which includes: Prof. Arthur E. Kennely, Harvard, Prof. Alfred N. Goldsmith, College of the City of New York, etc...

The text on the application reads... "Join Now" You should be a member of the organization that is doing real things for the advancement of amateur radio. etc.... I could make a xerox copy of the application form and fax it to you if you wish.

In recent years we have such "amateurs" as...

Phil Karn KA9Q...

who almost single handedly introduced the Internet's TCP/IP protocol suite to the modern personal computer [IBM clones as opposed to the Unix based computers] by the release of his "KA9Q" TCP/IP "stack" as free ware. Many professional programmers had said that the base PC with the 8086 microcomputer and 640 K of memory could never support such a complicated communications stack and that only powerful Unix machines could do that! Well... Phil did it anyway and then...

This KA9Q "stack" was picked up and modified by many commercial interests and led to the exponential growth of TCP/IP on the PC platform, and made a very large contribution to the commercial growth of the Internet.

>The first amateur was Marconi

I'd think he fall into the "professional" catagory rather than
the "amateur" catagory. He had visions of $$$ in mind all the
while he was perfecting his apparatus. Note that his equipment
contained nothing original -- he utilized ideas and devices of
the legions of inventors who came before him. (For example, in
Blake's HISTORY OF RADIO TELEGRAPHY AND TELEPHONY, an encyclopeadia
of early wireless circuits, Marconi's apparatus isn't presented
until page 100 -- 99 pages of circuits and their descriptions
come before him.) We can thank him for putting all the pieces
together into a workable system.

Perhaps, but your ranting and your personal attack detroyed your
credibility. Besides, if it's "dead" why does it bother you so much?

> By the way idiot my ID is not misspell it is just the way I intended.

You misspelled "misspelled" in the above sentence too.

> Thanks for making my point. I gave you my views of this "hobby" from my

Those weren't views. They were hyperemotional adolescent rants.

Cheers,

Lenny-t

I made no personal attacks until pinheads like you made asshole comments. The fact that HAM is dying / dead doesn't "bother" me. I just accept it as a matter of fact, like typewriters or B & W televisions are obsolete. They reached the end of their usefulness only to be replaced by newer, cheaper better ways of doing things. What bothers me is the wasted bandwidth of all the HAMS wondering "duh, Why is it dying? Why doesn't anyone care but us?" I just told you why, LISTEN AND LEARN.

As for misspelling a word sorry (fucking grammar police) at least I got the important ones right like IDIOT, MORON and ASSHOLE. By the way I am neither "hyperemotional" nor am I an "adolescence" I am 34 and I will be more than happy to indulge your half-witted comments.
Last, I have responded to a post on rec.radio.scanner so take your hobby and your whining about how bad it is somewhere else you pathetic bunch of pencil protector, old fart, has-been losers. When the last one of you drops dead (we won't have to wait long) I'll piss on your grave and your bullshit HAM society. Now thanks to the morons who are representative of HAMS on these newsgroups not only do you not have a potential new member you have another person who is indifferent to your cause.

By "adolescence" I gather you meant to use the noun "adolescent." Well, yes, you do come across as an adolescent. My goodness, you seem to delight in foul language and rude behaviour as many adolescents do when they attempt to shock their betters.

Our gain. We have more than enough of your sort of do-nothing whiners
already, who expect other hams to do all the work but expect all the
benefits handed to them for nothing.

You don't have what it takes to be a ham. Not even a poor one. Take
your whining and your foul mouthed attitude back to whatever sewer it
was you climbed out of, lid.

Yea great answer "who cares if we never get another member" great attitude. Thanks for making my point, AGAIN. What the hell are you talking about? I didn't ask you to do a thing for me. Originally, I replied to one of these "our hobby is in shambles how can we make it better" posts. Work? what is work about sitting your ass in front of a "radio" it's amateur radio NOT BRAIN SURGERY GUYS.

> You don't have what it takes to be a ham. Not even a poor one. Take

Oh my, I'll never be a HAM! Now what will I do? Hmm, get a life. What's a matter multiple syllable words confuse you maybe I should morse code the dirty words so you can have some real world use for your "wonderful skills".

Once again to another brilliant HAM operator, PISS OFF and DIE.

I am not going to TEACH you anything.

You guys want to LEARN why people could care less about HAM radio and why your ranks are almost ZERO (I guess you care because every HAM radio newsgroup is full of "WHY, WHY, WHY posts). It is because you DO NOT listen to others outside of your hobby, outside of your demographic and outside of the "good OLD BOY network you have created. As a whole you have FAILED miserably to recruit any new blood because of your stubbornness, your narrow mindedness and your reluctance to accept change. Yet you continue business as usual even as your numbers dwindle to nothing.

I Never said you insulted me personally the first MORON did by calling me and IDIOT and the other two followed suit by attacking me and my intelligence by pointing out a misspelled word.

Never met your nephew maybe he is "MATURE" for his age. How old does that make you? The Older you are the smarter and wiser you are right? WRONG!!! You gonna prove my views of the average HAM right, Brian? So far so good.

Finally, I do not know what a "scanner freak" is? I happen to own, listen to and use a scanner SO WHAT? I have a broad base of interests this which happens to be but one. I was thinking of doing something with HAM radio but after my experiences with HAM operators I guess I am proud to be called a "SCANNER FREAK" by one of you.

This guy responds to my post calling me "6-year old" a "do-nothing whiner" that " I don't have what it takes" etc... and when I forward my response to his message he gets pissed off and threatens to report me to my ISP. What's a matter not enough space with all the kiddie porn on your computer? Afraid mommy might see what little boy is up to? You are a coward, you think you can attack someone then hide in the newsgroups. I post my opinions my email address and stand by my thoughts.

If I saw you on the street you would not address me in such a matter because I disagree with your position. Would you? I think not, cause they would have to surgically remove my foot from your ass.

Say hello to my KILLFILE you arrogant, piece of crap.

Sycho_Graphics wrote:

> Once again to another brilliant HAM operator, PISS OFF and DIE.

Do NOT send me any more unsolicited e-mail, or I will notify your ISP that you are harassing me. Say whatever you wish in UseNet, but stay out of my mailbox.

I will not warn you again.

Actually, in theory, I think this has a lot of merit. It would be akin to being licenced on different types of aircraft. The certification would apply only to what was being tested - which is what testing should be about, don't you think?

It would eliminate the absurdity of using a Morse test to grant access to every mode on HF. For example, the Morse test would grant Morse access on every band - a much more logical and sensible system.

It is the practical issues which make this purely academic. (1) The logistics of doing so - You would need an examiner who was certified in every possible mode and you would have to be certified merely to try something new; and (2) Who will do the testing for new modes?

"The devil is in the detail." as a workmate is wont to say.

Mark.

Oh, I gather that it must be something to do with the Monica incident. I can't say that I took much interest in the story. Understandable, I guess, because I'm sure not too many people in this NG would be interested in what John Howard is doing - I'll let you figure that one out. ;-)

Again, why? The loss of the skills learned, in todays appliance
operator enviroment, will result in no degradation to the hobby,
the operator, or those around him.

Well, let me rephrase. The requirement for code into any level of
HAM radio did kill the hobby, not code itself. If there had been
a no-code class of license 20 years ago, it would have allowed a lot
of people into the hobby that would have helped to enhance and
enlarge the hobby.

Those people would have been more of a voice to the FCC, as well
as helped to bring new technology to HAM radio.

Instead, we declined.

The first amateur was Marconi in the history books but you
might want to check out Braun, Tesla, and a few others.

"Marconi shared his Nobel prize with German physicist Karl Ferdinand Braun, b. June 6,
1850, d.Apr. 20, 1918, in 1909 Nobel Prize for physics with
Guglielmo Marconi for his work in developing the radio.

Braun, who spent his career as a professor of physics at
German universities, increased the range of Marconi's
transmitter, invented the crystal rectifier (a device that
allows current to flow in only one direction, and improves
radio transmission), and later invented the oscilloscope, a
cathode-ray-tube laboratory device that was the forerunner of
today's television and radar tubes."

Source: The New Grolier Multimedia Encyclopedia

Another great innovation that hams brought to the party
was helping people in times of distress - for FREE! Ironic
that a group of people known for "intense thrift" would give away
life saving services at their own costs - sometimes putting their
own lives at great risk too - and expect nothing in return!

Good luck with your thesis - please post it when done so we
can all enjoy it.

73!

Bullshit. I'd still be a General if Incentive Licensing hadn't
happened. Myself and tens of thousands of others did 20wpm in front of
FCC examiners, one minute solid copy, all just to be able to operate
in a lousy 5.7% of the HF bands. . . . never mind that the number of
hams has tripled +/- since then of course. Whatta "disaster"

That might be stretching it. I think MIT's PCIP predated the KA9Q software,
and probably had a larger base of commercial derivatives before CPU speeds
outgrew them.

But look at RFC 1122 for references to the "Karn algorithm" for computing
more accurate round trip time estimates for TCP. I think there is an
ACM SIGCOMM paper referred to in there. I'm pretty sure this came out of
the work with amateur radio TCP/IP (a lot of the really good, fundamental
insights into TCP protocol dynamics in the 1980's came from the experience
of running TCP over the really crappy networks that existed then).

I agree with Dwight. You're either part of the problem or part
of the solution. Innovate, innovate, inovate. Change, change,
change. Help or get out if the way. In a word we need to
spearhead wireless broadband! In addition we need to stand
together in order to restructure the FCC rules for it.

Your making the decision to not get a license is the best thing that
could happen to ham radio.

I hate those absurd and realistic "motivation" sayings.

> In a word we need to
> spearhead wireless broadband! In addition we need to stand
> together in order to restructure the FCC rules for it.

I don't agree. Putting all eggs in one basket, wireless broadband or not is not the answer. I see this sort of tunnel vision as no different from the "Morse Code or Nothing" syndrome. On the other hand, there is nothing wrong with updating the regulations and bandplans to accomodate these activities in a compatible way.

What Amateur Radio needs is an environment where Amateurs are accepted for what THEY want to do, not because it suits the fetish of one of more groups of indivisuals. The biggest problem that the hobby faces is its own members! There is one group saying that anyone who doesn't know Morse to my standard; or pass the same exam as I did, are knuckle dragging apes, now there is the "If you aren't into broadband, you are a fossil, holding it back".

Prospective Amateurs who listen to or read what Amateurs say about themselves have more than enough reasons to question whether it is a hobby to worth getting into. There was some young fellow in a recent post blowing off a lot of hot air about that fact that Amateurs like to talk, but not to listen. Although he was an angry little ant, there was a kernel of truth buried in the volumes of waffle. As a group, we seem to be more interested in making sure that everyone else is made to like what we like, and resisting the efforts of others to make us like what they like. The bands are large enough for everyone to what they want. Even natur recognises that survival depends on diversity, not mono-culture.

To bastardise a quote "We have met the enemy, and they are us".

Ah, yes, big difference.. lets lower the requirements to can you
drool your name across the signature bar code line.

>
> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Never happen! If anything the 5 wpm requirement is a token that will
be easy to simply do away with in a decade or so.

> Step 4: No-code license should be one year non-renewable.

All licenses should be sign your name on dotted line.

> Step 5: Remove negative influences by disbanding the ARRL.
>
> wouff hong
>

I'm quite certain ARRL wasn't promoting a 5wpm Universal HF license,
but they simply realized the FCC was not convinced code was a viable
examination requirement for HF.
Where in commericial radio is morse required or even used, except
perhpas as a beacon?

As I remember Phil Karn introduced TCP/IP for amateur radio at one of
long gone Mid-Atlantic Packet Radio Council meetings.... (the one held
in Savage, MD). I can't put a year on it. But at the time the TNC-2 was
rumored but not yet a reality.

It was an amateur radio adaptation of the existing TCP/IP. Just as AX.25
was
an amateur radio utilization of the existing X.25 transfer protocol.

However, I think Phil did a lot of development for TCP/IP in his job
(memory wants to say that he worked for Bell but I may be wrong)

If I root around in the attic I might be able to find the diskette
he gave out that day.

But going on from here....
While packet radio was what we could call a "reverse" development in
amateur radio, meaning something we adapted, it sure did open the door
for commercial development of mobile data services.

Do not read your own opinions into what I wrote. If someone
wants to do only CW with "a paddle boat swing" or whatever, then
more power to them. Just do not stand in the way of innovation
doing it. My point is to intergrate both. Don't be afaid of that
change.

Thank you for the compliment that we can motivate and encourage
each other.

I did not say only wireless broadband. Yet, if you've been
keeping up you would know once you have broadband a whole world
of options are opend up to us.

You say.....

>To bastardise a quote "We have met the enemy, and they are us".
>
I say lets work together as hams not afraid of change. I suggest
us older folks leave a legacy that the younger folks can be
proud of. If nothing else, we must clear the way for innovation.
Today, most of the innovators just go where they can invent
without old out dated restrictions. Saddly away from Ham Radio.

Wirless broadband is the way of the future IMHO. It would be
nice if us supposed wirless experts would take us their.

Just look at cellular. Look haw they've take our ideas, applied
them with their own rules and now beat the pants off us (mostly)
for every day communications (except for the price charged).

Actually, I agree that we as hams need to be more ready to
change. While he may be too harsh, I disagree on the following.
I'm a ham and want change. I don't mind if a scanner user
becomes a ham.

Beyond the bickering, there is a point. Now don't get me wrong.
Let's keep hope. Yet, everyone knows Ham radio is not as
advanced as many other technical hobbies.

Remember, to each his own. If you're happy with the status quo,
then God bless you.

So IMHO, we need innovation *AND* the rules to back it up. This
includes a revaluation of ecryption and further innovation where
two said mutually exclusive benifits can be made to work
together. For example have (at least a level of) encryption and
still keep business out.

What can we do about it??????????????????

RF emissions rules to take them as an example are a matter of
Safety, not merely to Ham himself, but to memebr of the public as
large same as a major change in driving a Car. Restesting is a way of
dealoling with this. A better way still would renewals testing that
focuses on Rules related, or safety related issues, but that might be
too cumbersome to introduce.

Vital to our hobby? Not really. But not a bad one, in addtion
it would tend to give us and the FCC a real picture of our numbers, by
seeing that those whoe migh not be active but keep renewing just
incase are sweep out. Of course that sort of pruning might be bad for
us the percentage of inactive Hams is as high as some like to
speculate

Hello folks!!
Just wanted to let everyone know that there has been major improvements to
the world wide voice & Text chat system for hams!! There is now the
provision for private chat rooms. The idea is that you wait for someone to
arrive in the main chat then go to a private chat with them if you wish. The
audio in the system rivals that of anything currently available and also
supports a text chat on the same screen. Use the system to set up skeds,
check the muf on a freq, meet new hams, have meetings or just plain ragchew.
Go to the url here to directly enter the chat
http://home.earthlink.net/~mitbr/AmateurRadioChat.htm
If no ones there when you arrive simply hang around for awhile while you
surf the net some one will come along!! Spread the word folks .

Hi Larry,

I've had a set of M2 eggbeater antennas (2m and 70 cm) for a couple of years now and I'm quite happy with them. I can hit RS-12/13 and the Fuji birds with no problem. The antennas are mounted in my attic. Get the radial kits. I also highly recommend getting an external preamp, at least for the 70cm antenna. makes a bif difference. They work great for local repeater work too.

Good luck,

Manny

1362. Re: Mode JA question

Newsgroup: rec.radio.amateur.space
Date: 2000-05-22 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3929CCB9.9EE1EAC5@dialpoint.net>
Source record: 9301

The JA mode only refers to using 2 meters up and 435 mhz for the
downlink. Some are for FM and others while you can use FM it is not a
good practice. If the sat is using a linear transponder then any mode
can be used. It is not good to run FM on the sats that are not made for
it as you use up a lot of bandwidth and mainly the batteries or other
power source.

Please only use FM on the sats that are FM only.

I have not recently used UO14, but back when it was available for amateur use after launch, it was often noticed that it was difficult to get anything uploaded. Jeff Ward then switched on this repeater mode for a short time, and could hear the same problem.

Probably not the same guys, as it was over Europe. But it seems to be quite usual for dealerships in certain countries to sell amateur radio equipment to people wanting mobile radio for some special purpose, like taxi companies, who do not qualify for- or do not want to bother with licensing. They tell them to tune it somewhere high in the band, where amateurs will not bother them.

The traffic Jeff heard was most likely from Spain. But here in the Netherlands, I could also hear pirates on the uplink. They held long talks mostly without mentioning callsigns, but occasionally people working at a hamradio store were also involved. Apparently they don't bother whom they sell their equipment to, as long as they get the money.

Back then, that was illegal. But local laws have since been adjusted down to European union level, and now this is perfectly legal, just as in Spain.

You can, but it would be very antisocial.
You will take all the transponder power and bandwidth to yourself for your
single QSO, while in SSB it can be used for many QSOs at lower power.

Source record: 9397
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

Eric,

The Aircom coax is fine (at least for what we are using it for). We have two runs at about 100 feet for our up and down links between the up/down converters and the outdoor equipment (amps, etc.) The higher frequency at just over 2 GHz seems to be okay. I don't have the exact figures on attenuation, but can get it for you if you need them. I suspect you want to know who it holds up over time. We have had this system up now for two or three years with no problems with the feed lines (most of the runs are admittedly protected in under ground conduits). We had a Typhoon hit a couple of years ago that blew the new dish down (6 meter) and we only replaced the connectors due to being broken and to eliminate fears of water damage, otherwise to coax was okay. The connectors, I recall are special for that coax, at least that is what the engineer that supervised the installation told me and provided me with (I believe him).

By the way, the operation on this end is for University of Guam's PeaceSat earth station using a couple of retired GOES satellites for distance education here in the Pacific.

Please feel free to contact me if you need any other information I may able to provide you with on the coax, etc.

SB NEWS @ AMSAT $SPC0522
* SpaceNews 22-May-00 *

BID: $SPC0522

=========
SpaceNews
=========

MONDAY MAY 22, 2000

* OSCAR-11 NEWS *
=================
During the period 15th April to 16 May 2000, fairly good signals
have been received from OSCAR-11's VHF-FM beacon on 145.826 MHz.
The battery voltage during daylight passes has continued to decrease.
The average value observed was 13.6, with a range of 13.1 to 14.0 volts.

The internal temperatures have again decreased, by about two degrees C.
They are now 0.6C and -0.6C for battery and telemetry electronics
respectively. Further reductions in temperature are expected until
July.

The Z axis magnetorquer counter reached its maximum value of 1024
towards the end of April. This has stopped further magnetorquer firings,
and the attitude is now being controlled solely by the passive gravity
gradient boom. The magnetometer readings indicate that the attitude
remains nominal. The spin period has steadily increased during the
month from -231 to -324 seconds. Ground control operations are
needed to reset the counters.

A single WOD survey of channels 10, 20, 30, 40 (+Y, -X, +X solar array
currents, array voltage) dated January 06 has been transmitted. Note
the year of this WOD survey is incorrectly displayed as 99. This survey
clearly shows the solar eclipses, and a spin period of 340 seconds.

Users should note that the date in the hardware generated ASCII
telemetry is now advanced by THREE days, and the other dates (which
are generated by software) are advanced by ONE day. Ground control
may be able to correct the software generated dates, but not the
hardware generated date.

The Mode-S beacon has been heard by Alan G2HIO, who reports good
signals. He uses a 5-ft dish, with 1.5t loop, and Drake converter.

OSCAR-11's operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The ASCII bulletin is currently a static message, detailing modes and frequencies of all the amateur radio satellites. There are additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The Mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. This beacon is a useful test source for those testing Mode-S converters, prior to the launch of P3-D. However, the signals are very weak, and there is a lot of Doppler shift. Users should also note that the polarization of OSCAR-11 is left-hand circular. Even if you can't hear OSCAR-11, your equipment may still be okay for P3-D.

Any reports of OSCAR-11 reception on 2401 MHz would be most welcome, and should be directed to Clive Wallis via email at: g3cwv@amsat.org.

OSCAR-11's 435.025 MHz beacon is normally OFF, but it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When this beacon is transmitting, the 145 MHz beacon is normally OFF. The data transmitted is mainly binary.

Listeners to OSCAR-11 may be interested in visiting a web site dedicated to the satellite. The site contains details of hardware required and some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded as new data is captured. Also included are some audio files that include examples of each type of data transmitted by OSCAR-11. Each one plays for about ten seconds. There are also examples of Mode-S reception. All the audio files are zipped so that they can be played off-line. These are designed to help listeners identify the various types of data transmitted by the satellite, and give an indication of the signal quality required for successful decoding.

The OSCAR-11 Web Page is located at:

http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV (g3cwv@amsat.org)]

* SUNSAT NEWS *
==========
"Sunsat will now also offer digital services", Johann Lochner, ZR1CBC of the SUNSAT SO35 command team at the University of Stellebosch announced late last week.

When the orbit permits the acquisition of high resolution images, image data will be broadcast in an unconnected AX.25 data stream across the world. Radio amateurs can collect data in KISS format and merge it via the Internet. This process will reduce the download times of the 50 MB images considerably.

Satellite operators with PACSAT stations are invited to join this project. Visit Sunsat's web page, at:

http://sunsat.ee.sun.ac.za/index.html

for more information.

Periodic announcements, bulletins, status information and calibrated telemetry will be transmitted as unconnected AX.25 packets, to be displayed in human readable format by terminal software.

Digipeating of unconnected AX.25 packets will be activated. It could, for example, be used for relaying low bandwidth APRS data.

These services will be enabled for all non-voice passes over Dayton, in the USA, during their annual Hamvention from 19 to 21 May. During the next few weeks the schedule is to be extended to a continuous service, except for when the voice repeater is active.

For South Africa, week-day/night passes will be used by the Sunsat control station. On weekends, the voice repeater will operate as at present. Typically one pass per day will be used for control purposes. On remaining weekend passes, digital services will be active. Schedules are published on the Sunsat web page.

[Info via Hans van de Groenendaal, ZS5AKV]

* JAWSAT WO-39 RESET *
==========
Randy Kohlwey, N7SFI, reports that reset commands were sent to the JAWSAT satellite late last week. He would appreciate receiving reports from anyone who hears the satellite on 437.070 and/or 437.175 MHz. A reply to the reset command was never received by ground controllers last week.

The beacons should be on for 30 seconds with 9600 bps GMSK modulation. A telemetry packet is sent at the start and at the end of the 30 second transmission. The time between beacons is 90 seconds for 437.175 MHz and 255 seconds for 437.070 MHz.

Controllers are assuming that the WO-39 is object number 26061, but in case it is not they also sent reset signal to objects 26064 (FALCONSAT) and 26065 (ASUSAT). Replies were not received from these satellites either.

[Info via Randy N7SFI, and Paul KC7QFS]

* AMRAD-OSCAR-27 NEWS *
==========
Last week, Chuck, KM4NZ, reset AO-27's TEPR settings to permit longer

transponder operation towards the equator. The settings are now as follows:

TEPR 4 is 42
TEPR 5 is 78

[Info via Chuck Wyrick, KM4NZ]

* SECOND CALL FOR PAPERS *
==========
The 18th AMSAT-NA Annual Meeting and Space Symposium will be held October 27-29th, 2000 (Friday-Sunday) at the Holiday Inn West in Portland, Maine. This is the second call to authors who wish to submit papers for presentation and publication in the Proceedings document of the Symposium.

Topics covering the diverse aspects of the Amateur Radio satellite disciplines are sought from throughout the AMSAT community. If authors do not wish to present a paper but have a topic of interest, they are asked to submit the topic and perhaps arrangements can be made for presentation and publication in the Proceedings document.

Key deadline dates for authors are as follows:

June 1, 2000 - Final due date for one-page abstracts.

When submitting abstracts, authors should include any time preferences for presentation. Authors will be advised by e-mail and/or postal mail shortly after June 1, 2000 (if their paper has been accepted or not).

August 1, 2000 - Camera ready copy due.

This is the final due date for authors to submit camera-ready copy of their paper (authors are urged to submit their papers in advance of this deadline). Upon receipt, papers will only be superficially edited and will generally be printed as submitted. Authors are asked to refer to past proceedings for the grammatical layout of papers. Authors are also requested to provide an electronic copy preferably in any version of Microsoft Word or WordPerfect in the event a disaster is spotted and can be corrected at the last minute.

In September, authors will be provided with a tentative Symposium agenda that provides the time they will make their presentations. Each presentation should be limited to approximately 20 minutes.

Abstracts and papers should be sent to:

George Caswell, Sr., W1ME
16 Westwood Avenue
Scarborough, Maine 04074

More information is available by e-mail at: w1me@amsat.org

[Info via the AMSAT-NA News Service]

That sounds reasonably fresh to me... you only need better ones for
missions that have their own propulsion system. And for those, the sites
usually provide separate keps.

For planning purposes, does anyone know where (roughly) the AO-10 apogee subpoint will be during the N.A. Field Day later on in June? Right now, it's approximately west-central S.A. with a very favorable orbit for NA, Europe, NW Africa and SA (from a SE USA observer viewpoint). I plan on battery ops (without computer controlled antennas) using K5OE's "AO-10 antenna" during 'field day. Comments appreciated.

Where did you hear they have a replacement for the 847? And, just for my curiosity, what do you mean by "It has a lot of problems"? Maybe the early ones were less than hoped for, but the later ones are much better. If by "problems" you meant that it isn't particularly good on HF, I'd tend to agree. But then, I didn't buy mine to use on HF.......that's what my MP is for.

Eric, have you ruled out using inexpensive RG-6? This is what most of us TV dish heads use. It's very inexpensive as are the F style fittings. 150 ft run shouldn't require a line amplifier and the RG-6 (15 - 20 cents per ft) is good to 2 GHz.

Hi All
Just to let you all know the Mid Hants Radio Rally is very soon, on Sunday 4th June.

Entry is 1.50 UKP which includes a raffle ticket entry in the form of a 'Lucky Program'

This raffle is to support the Radio Amateur Invalid & Blind Club, and ALL proceeds from this raffle will be going to them.

Prizes donated so far are:

An A4 hi res flatbed scanner, donated by www.ebay.co.uk (worth 60 UKP)
A Millennium Gold Plated Paddle Key donated by the RSGB, (worth 90 UKP)
A 'Backyard Antennas' book, donated by the RSGB.
Two World Time Clocks, donated by ICOM.
A DIY Digital Intruder Alarm System, worth over 250 UKP
Beer and Wine

Plus more on the day.....
Just updated the website, so for more info and directions, go to www.g0wyf.freeserve.co.uk NOW!

1380. Which radio better for satellite work?

Actually, we've had some, uh, discussions about this... some people strongly believe in a cheap coax because there'll be a preamp. But we have already run one mission where the preamp was suspect and thus bypassed during the run, so I want the best we can get. It so happens we got a great deal on LDF5-50A for another dish run and a donation of a box full of Andrew connectors for it, so that part of the expense is already covered... the Aircom just looked like a good intermediate step since what we have now is waterlogged, UV damaged and unusable.

RG-6 came up, but I don't think it's durable enough for all we'd be putting it through. I also don't want the impedence mismatch if we are doing any interferometry or spectroscopy. (We actually have TWO of the 60 ft. dishes; the other one will be fed by the 80 ft length of LDF5-50A and a hardline run of RG-333 -- another donation.)

(The things are surplus gov't property; we lease them and pay thru the nose on liability insurance, which is why the cupboard is bare...)

QST--

You are invited to join one or all of the following lists on onelist. All these reflectors are e-mail based, and moderated so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@ONELIST.COM 200 members
CROSSFIELDANTENNA@ONELIST.COM 75 members
FRACTALANTENNA@ONELIST.COM 250 members

Please review the descriptions at

http://www.onelist.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at onelist, or to skip the process just do:

---------- -subscribe@onelist.com

where the ---------- is the name of a given list (such as 'fractalantenna')

I used the M2 Eggbeaters for about 5 years, both with and without the radial kits (which are supposed to add about 6 db to the overhead lobe). They definitely outperformed the ground planes I was using before. If you are going to use omni-directional antennas, they are the way to go. They have a very wide bandwidth too, so you can use the 2 meter Eggbeater to receive NOAA satellites on 137 mhz.

I would not assume that from an ad... some companies just re-order the
same ad to be placed in each issue, without re-considering the usefulness
or correctness of the content each and every month.

In the Dutch amateur radio magazine, an electronics shop has run the same
ad for about 10 years. The owner composed a page full of items of interest
at that time, like RTTY converter kits, Plessey integrated circuits, AMIDON
toroid cores, standard and custom-made crystals, lots of part kits for
construction projects in recent issues of the magazine, etc.

Then that same ad appeared and appeared and appeared like a Duracell bunny...

Many tracker programs have had trouble with the Y2K issue, much more than
the average computer program. This probably is because the 2-line elements
that are used as reference for the calculations store the year in two
digits, and it rolled over from 99 to 00. So the software had to be
prepared to treat 00 as 2000, not 1900.

I tested Quiktrak 4.0 before the Y2K thing occured. I was tracking MIR on a date of 12/31/99 at 11:59PM. The footprint covered a better part of the US. Once it hit 0000 on 1/1/00, the footprint looked like AO-10, covereing half the world. The was some talk here on the newgroups and a comment from the Quiktrak author that he may bring out Quiktrak 5.0. Nothing heard since then though. I miss the program. I like the way you could print up those prediction lists of passes. Oh well, it's a new century.

That is a nice test, but not of much practical use. Better is to
re-start the program after 1/1/00 and load new elements, and then see
if it tracks OK.

Some programs will pass your test and fail in that test, either because
they will not use the correct time after 1/1/00 or because they won't
correctly load keplerians with 00 as year number.

(once running, many programs will just increment a day counter and not
really look at the date)

A new amateur radio website would like information on your radio club.
The new website: http://www.callingcq.com will be up and running sometime
around the first of June. We will feature a swap and shop, special event
section as well as information of local radio clubs. We would like for club
officials or anyone that has all of the information on the club to send a email
to callingcqweb@aol.com with the following information: Club name, URL address,
and Contact name and email address. Don't worry about duplicate entries we will
filter them out.

Thanks very much for your support and we will be soon asking for submittal of
ad's for the hamfest section. If you can't wait go ahead and send it, we will
get it on as soon as possible.

Hi all,

the MIR cosmonauts can be heard during almost all passes (during
activity time on board) across southern Germany on their analog downlink
frequency 143.62 MHz with a fairly good signal even on a handheld with
rubberduck antenna. Obviously they are talking to the ground control
that can sometimes be heard faintly as well by acoustic feedback.

Although I do not understand russian, it is amazing to recognize that
busy work is being done up there.

Regards,

Edgar

I believe the actual frequency they use is 143.625.

Does anyone know where I can get technical details
and specifications for the old PRIMESTAR 3-foot sat TV systems?
My parents were recently switched to DIRECT TV and
the old PRIMESTAR system was discarded- they were told
they could "throw it out."
I inherited the dish and receiver/decoder.
Would like to find some technical details so I can
tinker with it. No- I don't want to steal pay TV.
I don't even like TV. But I would like to
foozle around listening to the basebands, etc.

http://www.heavens-above.com provides predictions customized to your
location of all amateur satellites for the current day (24 hours).
They also include frequencies. The link above is the initial entry
page. This page will prompt you to enter your location. Bookmark
the resulting page you get after telling them where you are.

Nope, never seen that problem. Try converting a new set of keps with
CVITK, then loading them. Make sure you load them as AMSAT keps. BTW,
I talked to the author of IT recently, and the new version is in Beta
test, and should be out soon. However, he declined to commit to a
specific date.

The stock FT-847 is OK for HF use. However many people are impressed with the performance improvement when the stock RX filters for SSB and CW are replaced with high performance crystal filters. Some have even used the FT-847 for contest work configured this way with very good results.

Check out these URLs:

Hi Michael,

Perhaps this web page will help you out ...
http://www.heavens-above.com

When you get to this page you will need to click on the link to select
your location. Bookmark the page you get after selecting the location.
You'll find links for visible passes as well as a 24 hour listing of
the day's amateur satellite passes. UO-14 is listed as Ocsar 14.
Sunsat (SO-35) on 145.825 also is an easy catch.

I don't know how many hams know about this, but there is a really
neat professional quality satellite tracking program available on
CD-ROM from:
http://www.stk.com

This is probably not a good program to run if you're solely interested
in tracking amateur birds, and it won't interface with the automatic
antenna pointing software, but it is a neat program to play around
with. You can request a 30 day trial of their advanced features,
(like 3D visualization) none of which you can run after the 30 days
without purchasing the software, (and it is sold at professional
dollar prices), but you can do almost anything you can imagine with
this program, and the basic program without the add ons is free for
the request. The interface is not easy to get used to, because you
have so many options and settings to choose from, but once you
master the basic interface it is easy to set up simultaneous
tracking of multiple birds on a single machine. One of my favorite
simulations tracks the entire GPS constellation, all at the same
time, and all in real time. It's really fun to play around with.
I highly recommend it if you like tinkering with
tracking programs and experimenting with "what if"
scenarios. To get the program, you'll have to register
on their site, but the registration is free, and it entitles you
to the CD, mailed to your door, a huge satellite database,
including full mission descriptions, and a great satellite
tracking program. You can expect a phone call or
email from their salesman, but at least the one I spoke
with was a really nice guy who was not out to force sell anything,
and was perfectly happy to agree to ship the CD so that I could
play around with it, knowing full well that I had no intention
of buying the program. I have no relationship with the company.
I just enjoy using their program.

Dear All;

I just had the good fortune to put up M2 circularly polarized antennas, with an az/el rotor, and begin a new stage in my satellite career, after 7 years of working with omni-directional antennas. I did get to work some AO-10 QSO's for the first time, including my first real satellite DX (a DL5 station).
I have a question concerning the phenomenon of "fm'ing". The AO-10 website mentions it, and suggests that utilizing the satellite while it is occurring might be bad for it. However, it didn't describe what it is, and what it sounds like. Could some one help me out?

Thanks and 73 de Bernie, KF0QS

To use keplerian elements you need a computer. The formula is too
difficult to key it into a calculator every time.
(a programmable calculator could be used, though)

However, I assume the webtv allows you to access web pages, so you can use
one of the tracking pages on the web mentioned here several times over the
last weeks.

1426. Re: AO-10 Question

Newsgroup: rec.radio.amateur.space
Date: 2000-06-01 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <39363AD5.A507B97A@dialpoint.net>
Source record: 9260

AO-10 has been up a long time and the batteries are either bad or so weak they will not hold much of a charge. Therefore AO-10 only works while it is receiving power from the solar cells that have to be in the sun. As the power supply voltage drops when the solar cells turn away from the sun the transmitter becomes somewhat unstable until there is not enough voltage to operate the transmitter at all. Instead of the ssb sounding normal it becomes more difficlut to understand and the cw signals will vary in frequency like a chirp.

Isn't this why we have radios? I've been doing live chat with other hams on the air for over 35 years now, so why do I need an internet chat room to do that?

Didn't try and I don't want to better places to spend my time and money. Who needs a damn test to operate a CONSUMER oriented electrical communication device in the 21st Century? I use a cellphone, GPS receiver, cordless phones, computers, TV, VCR (I can actually set it too :)), High-end Home Stereo remote, FRS devices, CB radio, Palm Pilot , RC cars and boats and even a microwave oven and I don't need a damn license for those. What makes HAM gear soooo complicated I need to pass a test and be TAXED on it by the FCC?

By the way Jim who the hell are you gonna MORSE with? Aliens, Russian SPY ships, the Space Shuttle, clandestine operatives so deep under cover that they can't afford voice transmission equipment (poor bastards). So, who the HELL do you Morse too in the 21st century??? MORSE is DEAD. dot dot dot dash dash dash dot dot blah blah blah HA HA HA :) :) :) You guys kill me.

Man you guys crack me up get with the times folks your HAM hobby is as OBSOLETE as my VIC-20 and C-64 are to 1Ghz CPU's. Let the FCC use the space for something more useful, at least more interesting. Hell I'd buy a GMRS unit once the FCC re-allocates frequencies, manufactures mass produce (a la FRS), drop the price and licensing bullshit. I can see a uses for a 5-10 mile communication device on UHF, FRS is neat but limited. Technology WILL not stand still for long, I would love said GMRS with built in GPS, terrain mapping database, hell throw a cellphone , scanner, personal organizer and MP3 in there too, sell for $300.00 - 500.00 sweet. The future looks good to me at least.

1432. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 2000-06-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8h7j2v$m4k$1@news.hawaii.edu>
Source record: 9266
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

Well, if you spent a little time learning about ham radio, you would
be able to answer your own question. For one thing, unlike the other
electronic devices you described, ham radio gives you the capability to
broadcast on multiple radio bands, using considerable output power, and
using several different operating modes. A computer, home stereo, tv,
cell phone, CB radio, or other similar devices, do not have any of those capabilities.

> Man you guys crack me up get with
> the times folks your HAM hobby is as
> OBSOLETE as my VIC-20 and C-64 are
> to 1Ghz CPU's. <snip>

There is a greater demand for radio, and ham radio, today then there
has ever been. The list of devices using radio, and agencies using
radio, has grown considerably, and will continue to grow in the future.
Therefore, the need for people with at least basic radio skills is also growing.

Obviously a dummy that couldn't learn morse code.
Go buy a study tape and study harder. LOL
Long live morse code and ham radio.
